IN Mr. Backhouse's letter (NATURE, vol. x. p. 437) he remarks that the supernumerary rainbow is commonly seen only in the upper part of the arch. Dr. Thomas Young, in his Bakerian Lecture ("Works," vol. i. p. 185, or Phil. Trans. 1804), after explaining the supernumerary bow by interferences, quotes a paper in vol. xxxii. of the Phil. Trans., in which Dr. Langwith describes his observation of a supernumerary bow on August 21, 1722; then remarks: "I have never observed these inner orders of colours in the lower parts of the rainbow. I have taken notice of this so often that I can hardly look upon it as accidental; and if it should prove true in general, it will bring the disquisition into a narrow compass; for it will show that this effect depends upon some property which the drops retain whilst they are in the upper part of the air, but lose as they come lower and are more mixed with one another." But I am not aware that anyone has ever remarked an appearance which struck me on seeing a few days ago a very complete primary and secondary bow with a portion of two supernumerary bows within the primary and about the highest part of the arch. To my eye the supernumerary bows were *not concentric* with the primary. My son agreed with me as to this appearance when I pointed it out to him; yet I thought it was probably an illusion till the following explanation occurred to me.

The rain-drops may be presumed to be smaller high in the air, and to increase as they descend.

Now, the smaller drops produce wider interference fringes than the larger drops do. Hence the supernumerary bow is widest and therefore farthest from the primary at the top of the arch, and gets narrower and nearer to the primary as it descends the arch on each side, and "in the lower parts" ultimately fines away to nothing. According to this theory the supernumerary bow is not always concentric with the primary, nor indeed circular.

It should be observed that another reason for the interference bow being seen most frequently at the highest part of the bow is that the small drops high in the air are probably more uniform in size than the larger drops lower down.

Oct. 8 JOSEPH BLACKBURN

Colour in Flowers not due to Insects

THE doctrine that the conspicuous colours of flowers are entirely due to the necessity for cross-fertilisation by the agency of insects seems to be taking the world by storm. It is supported by Mr. Darwin and Sir John Lubbock. It could scarcely be put forward on better authority. Yet there are several facts with which it does not harmonise. For instance—

1. *Cultivation* increases the size and colour of flowers quite independently of the existence or non-existence of insects.

2. *Double flowers* in which the doubling arises from metamorphosis of stamens or pistils are more showy than the single forms, yet insects can be of little use to them, since they are either partially or entirely barren. The double-blossomed cherry is brilliantly conspicuous, but it bears no fruit.

3. Such *abortive flowers* as the cultivated Guelder Rose and Hydrangea depend for their beauty upon the destruction of the reproductive organs. If their increased splendour is meant only as a lure to insects, it is surely an absurd failure.

4. The *autumn colours* of leaves and fruits can serve no such purpose, yet these are often as bright and conspicuous as the flowers of summer.

5. *Fungi* and *lichens* exhibit brilliant colours, which can have nothing to do with insect-fertilisation.

Do not these facts indicate that though insects may be attracted by conspicuous colours, and may have some influence in the maintenance of coloured species, there is yet a deeper and more permanent cause for the colour itself?

Leicester, Oct. 11. F. T. MOTT

Habits of Squirrels

WOULD you permit me to ask of your readers a question or two upon the habits of squirrels? I have had one in my possession, from the age of three weeks, for more than two years. I have noticed that whenever it cleans itself, after licking, it *sneezes* violently three or four times into its forepaws, then rubs them thus damped over its fur. It seems to have the power of sneezing at volition.

Now, is this habit of sneezing, for the purpose of cleaning itself, a habit peculiar to squirrels; or is it shared by other animals?

I notice also that frequently when it is going thoroughly to clean itself it jerks its forepaws over its ears, bringing them back over its eyes, and always causing a milky liquid to suffuse the eyes. This liquid swims over the eye, and then is absorbed. I have thought that it may use this secretion also for the purpose of moisture. The animal is in perfect health and splendid condition.

A squirrel I had three years ago also had this habit, though in a slighter degree. D. T.

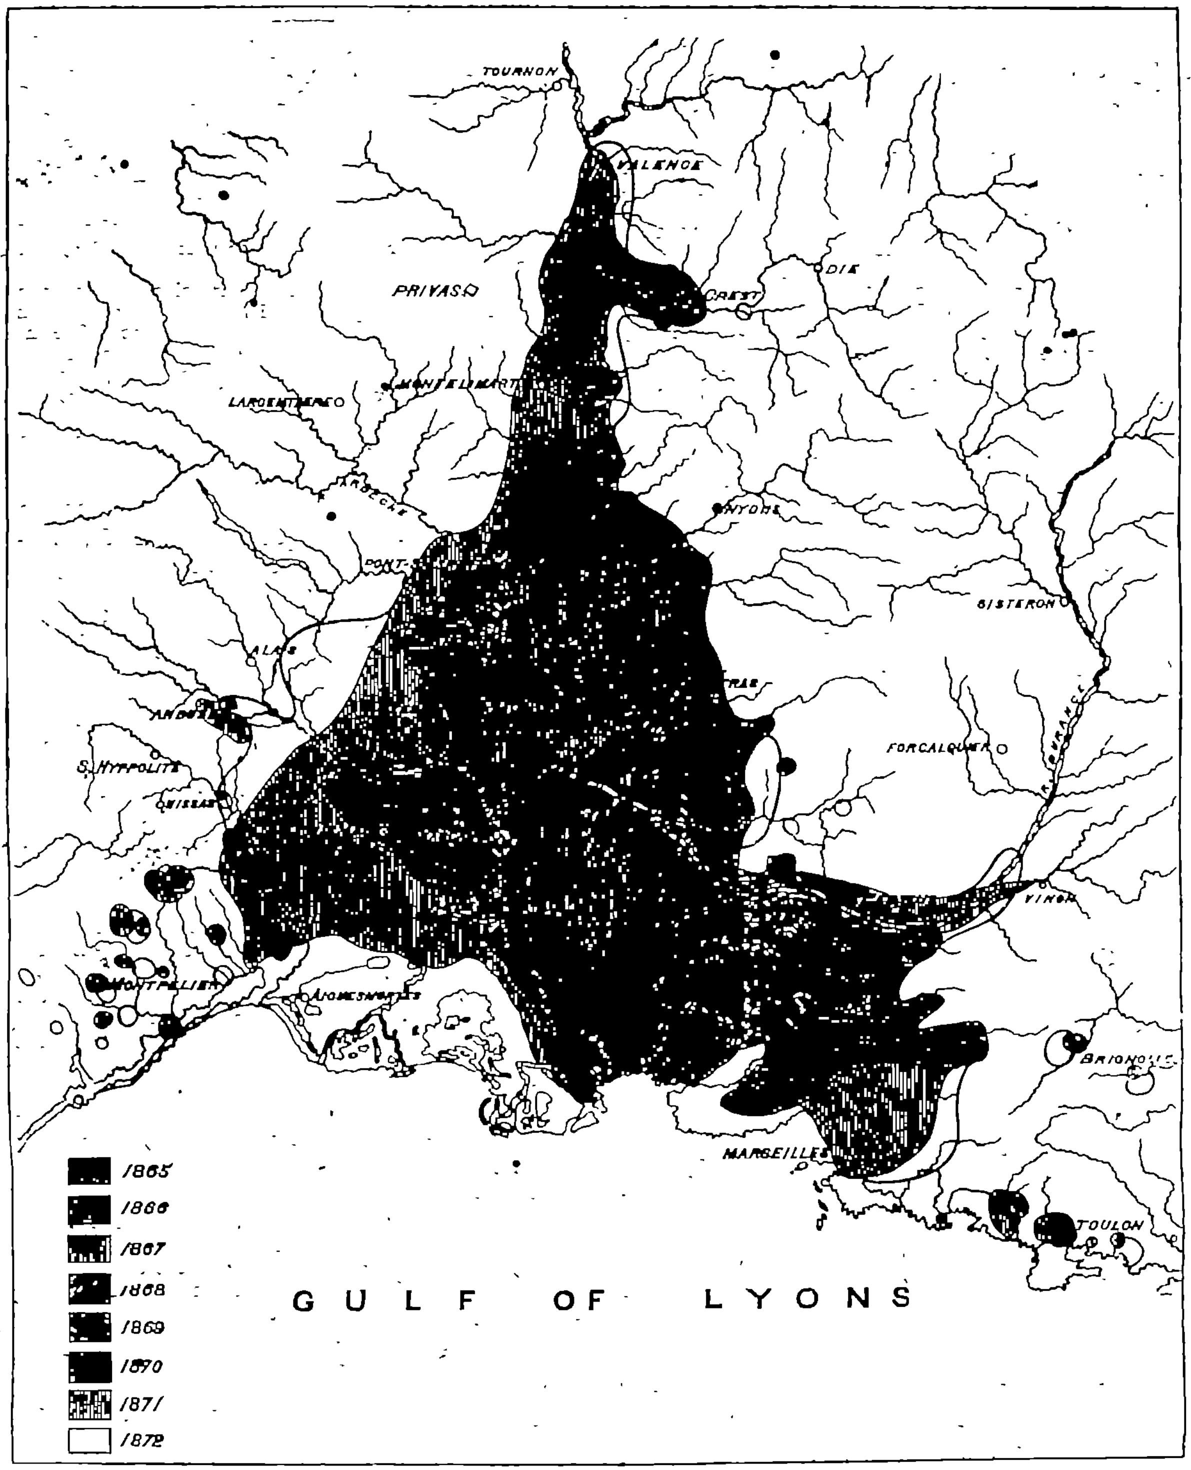
THE NEW VINE-DISEASE IN THE SOUTH-EAST OF FRANCE

I.

WE have before us the Reports presented to the French Academy of Sciences by the delegates of the Commission appointed by that body to investigate the phenomena of the new and terrible disease of the vine in the south-east of France—a disease which is fraught with the most serious consequences to the material prosperity of that country, which depends on its wine as a source of national wealth not less important than are our coal and iron to us.

It was in the autumn of the year 1871 that the Academy of Sciences directed special attention to the communications which poured in upon it from all quarters relative to the ravages of the new parasite of the vine in the South of France; and at the sitting on the 25th September in that year, it charged a Commission, consisting of M. Dumas as president, MM. Milne-Edwards, Duchartre, and Blanchard, to investigate the means of coping with the disease. The Commission examined with the greatest care all the manuscripts and printed monographs which were brought under its notice, and paid particular attention to the scrutiny of the leaves and the roots attacked by the *Phylloxera vastatrix* (for such is the name which has been given to the new insect), which had been sent to it from different places in France; and, with the object of giving to its labours the active direction necessary in such circumstances, it decided to confide the execution of them to three delegates, viz. MM. Balbiani, Max Cornu, and Duclaux, whose learned researches in zoology, botany, and chemistry, suggested recourse to them, and they were accordingly charged with the pursuit of all the observations which the subject would allow of, on the actually affected territory.

It is worth our while, at the outset, to observe the thorough and methodical manner in which an attempt has been made to wrestle with this new enemy of the material welfare of France, and the application of the resources of science to unravel as exhaustively as possible the causes and manner of extension of the invasion of the parasite from its first appearance till the present time. We in England are too apt in similar crises to neglect the practical employment of scientific means, to depend on private and individual exertions for the investigation and treatment of the different causes which threaten the national wealth or prosperity; and though in the long run perhaps we come out of the difficulty in a manner not altogether unsatisfactory, still such result can only be obtained at the expense of interests to which speedy action and prompt methodical treatment are the only means of preservation. But in France and in most of the continental countries of Europe, the State, or at least important corporate bodies, come quickly to the aid of science, which, thus subsidised and encouraged, can penetrate far deeper and can have a freer play for its researches. As a result, in the present case we have the studies of men of science on this subject of altogether national importance, studies which, if we mistake not, should go far to direct the efforts of the nation into the right course of treatment for the extirpa-



Map showing the spread of *Phylloxera* from 1865 to 1872.

tion of this alarming scourge, which has destroyed the produce of so many of the fairest vineyards of the south-east of France.

It is a matter of no difficulty to master the history of the new disease produced by the *Phylloxera*, and to trace its growth from the earliest beginnings. The first definite signs of the invasion of the parasite were observed in the year 1865, at a spot (plainly marked in the maps annexed to the report of M. Duclaux, and now copied for our readers) on the plateau of Pujaut, near Roquemaure, in the neighbourhood of Avignon, and in the department of the Gard, on the west bank of the river Rhône. Though in this year it attracted but little attention, in 1866 it descended rapidly from the plateau to the outskirts of the village of Roquemaure, and also appeared in several spots in the departments of Vaucluse and the Bouches du Rhône, both lying on the east side of the river-valley. It was the owner of a vineyard in this latter department, a M. Delorme, of Arles, who was the first to recognise the disease, while still in the birth, as a new disease, and to have the presentiment of the disasters which would follow in its train. At a later period a commission of the Society of Agriculture of the Hérault visited by request the vineyards around Saint-Rémy, and a member of that commission, M. Planchon, discovered that the cause of the vine-disease was an insect "destined to be the subject of so much discussion, and to become the source of so much misery." It was he who afterwards gave the parasite the name which it has since borne everywhere—*Phylloxera vastatrix*.

Before proceeding to describe the ravages of the insect and the manner in which it ultimately causes the death of the vine, it will be well to show the progressive extension of the disease itself over the country adjacent to the Rhône valley and lying inland to the north of the Gulf of Lyons. M. Duclaux has shown us, in his series of maps annexed to his report, the progress of the disease between the years 1865 and 1872, and marks it as gradually extending from the little spot first attacked in the neighbourhood of Avignon till in the last of those years it included the whole country between Valence on the north and Marseilles on the south, while westwards and eastwards it extended to Montpellier and Aix respectively, thus covering, roughly speaking, nearly four departments, viz., the Gard, the Drome, Vaucluse, and Bouches du Rhône. We are told in the memoir of M. Louis Faucon, also presented to the Academy of Sciences, and embracing a later period than that of M. Duclaux, that the disease extended to an alarming degree in the year 1873, at the same or a greater progressive rate, and had established itself in that year in no less than twelve departments of South-east France, having spread into the Ardèche, the Basses-Alpes, Var, Isère, Hérault, and even reaching so far as the Gironde and the two Charentes.

We may gain a more precise idea than can be afforded by a mere observation of the geographical extension of the disease, of the disastrous nature of the ravages of the *Phylloxera*, by the examination of some of the statistics of the grape-crop in successive years in some of the departments attacked. Thus, in the department of Vaucluse, where the disease showed itself in 1866, there were in 1869, according to the results obtained by the departmental commission instituted at Avignon to observe on the new vine-disease, 6,000 hectares absolutely dead or dying, and a much larger number already attacked, which have since succumbed to the parasite. Out of the 30,000 hectares of vineyard comprised in this department, 25,000, or five-sixths of the total area, have been destroyed. In the Gard, where the vine flourishes better than in the above-mentioned department, the ravages of the disease are yet most terrible, for in 1871, in the arrondissement of Uzès, but one-half of the average crop was produced, and in the arrondissement of Nismes, a tenth part of the crop was destroyed. These proportions, moreover, have increased since that year.

If we examine the mischief done in the less extended areas of the communes, we shall obtain a still clearer idea of the rapid spread of the disease:—

COMMUNE OF GRAVESON.

1865-66-67	mean crop	10,000	hectolitres
1868	"	5,500	"
1869	"	2,200	"
1870	"	400	"
1871	"	250	"
1872	"	100	"
1873	"	50	"

In the commune of Maillanne the crop in 1868 was only 40 per cent. of the average of the three preceding years, while in 1869 it was only 10 per cent. In the commune of Eyragues the crop in 1868 was about 33 per cent. of the average of the three preceding years, and in 1869 there was a further falling off of about 10 per cent. In 1870 the crop in the three above-named communes was almost entirely destroyed. From instances such as these, fairly selected from many others equally tragic in their stern figures, we may form some idea of the magnitude of the disaster. Indeed, it is difficult to see, so rapid is the extension of the disease, how, unless some potent and effective remedy can be soon applied, any vine-bearing district in France can escape the visitation of the *Phylloxera*.

Though there can be no doubt that the *Phylloxera* is the cause of the new vine-disease, this conviction was by no means arrived at at once, nor without considerable doubts being thrown upon it by those whose better judgment was obscured by the confusion of concomitant phenomena such as drought, cold, and impoverishment of the soil with the real source of malady of which they were the companions. Others, even now, hold that the *Phylloxera* is the effect and not the cause of the disease; this idea M. Faucon dissipates satisfactorily in his treatise by the following reasoning:—A vine is watched which is in a perfect state of health and vigour; not a single parasite is discovered in the ramifications of its roots. A day comes when the destructive insect invades it—it resists for some time; the *Phylloxera* lays its eggs, multiplies its numbers, and with them its attacks. The stem of the vine begins to show signs of the disease, and if the roots are laid bare, they may be observed to have deteriorated in some degree from their normal state. The multiplication of the insect continues, and assumes such proportions as to form yellow spots of no small size, the result of the close collection of a large number of the insects, whose puncturings are so numerous and so incessant that the roots can no longer perform their proper function, the nutrition of the plant, which, in consequence, falls into a most evident state of sickliness, lingers on for some time, and eventually dies. The *Phylloxera* takes its first food where it can get it with the least difficulty. After it has exhausted the surface rootlets, tender and succulent as they are, it attacks others deeper down; then it spreads over the hardier roots, till at last the prodigious increase of its family causes it to overrun the whole radical system of the plant, and even the part of the stock of the vine which is underground. It abandons the exhausted plant when it is of no more use to it, and its instinct turns its steps towards a new vine, where it can find fresh food. The work of destruction in a vine, especially if it be vigorous and the soil nutritious, is not completed in a few days. A year may pass without the vine exhibiting any marked sign of sickness. The store of vigour which it contains in itself, added to that which it imbibes for some time after it is attacked in the soil, will permit it during one or even two seasons to perform the double functions of nourishing both itself and the parasite which eventually destroys it. M.

Faucon's observations, confirmed by those of all the other persons who have made positive investigations for themselves, have established that—

1. The number of insects on a plant is in direct and constant accordance with the state of the roots.

2. According as the state of the roots is healthier, is the number of insects greater.

3. The number diminishes in proportion to the exhaustion and consequent death of the roots.

4. On an absolutely dead plant it is impossible to discover a single insect. Surely, therefore, the *Phylloxera* is the cause, and the only cause, of the vine-disease, since its appearance invariably precedes the rotting of the roots, and never follows on their decay.

We postpone till next week the description of the *Phylloxera* itself and the manner in which it attacks and ultimately kills the vine, together with the mention of the various means which have been proposed for the extirpation of the disease.

(*To be continued.*)

PHYSICS AT THE UNIVERSITY OF LONDON[*]

At the present time, when the bulk of the educated population of many countries may be divided into the three classes of *Examinandi*, *Examinati*, and *Examinatores*, a large part of any discussion of what is called the higher education must inevitably be devoted to the question of examinations. Usually, if the matter is discussed from the point of view of those whose business it is to teach, the result is the condemnation of examinations in general as unfavourable to all thorough study; and, from whatever quarter the discussion proceeds, it seems to be taken for granted that the functions of the teacher and those of the examiner are naturally opposed to each other. And indeed no one who has given any attention to the question can doubt but that such an opposition really does exist in very many cases. Originally employed by teachers themselves to consolidate and test the results of their instruction, examinations were at first a natural part of the educational system; but of late years they have rapidly developed into an independent species, which has separated off from the parent organism and now too often tyrannises over it. As of other developments, so of this, we are bound to believe that it is an adaptation to co-existing conditions, and therefore fulfils some useful purposes; but, from the teacher's point of view, as soon as examinations become detached from instruction, and come to be the end of learning instead of a means of teaching, the evils they produce are much more apparent than these benefits. When they have no worse result, they are apt to be viewed by students as affording them an authoritative standard, independent of the judgment of their professors, by which to decide what subjects of study and what parts of these subjects are of sufficient importance to be worthy of their attention. It is therefore not to be wondered at that such examinations should be looked upon by teachers with dislike, as being hindrances and not helps to their work, or that we should hear frequent protests against their excessive multiplication.

While, however, I in general heartily sympathise with such protests, and feel strongly that the difficulty of honest and thorough teaching in my own subject is greatly increased by the regulations for those examinations which, in fairness to the students attending my lectures, I am bound not to lose sight of, it does not seem to me that the remedy for the evils complained of is to be looked for in the abolition of the present examination system. This system is no doubt defective in many ways, and we may perhaps hope that some day it will be replaced by one more accordant with sound educational principles; for the present, however, it exists, and must be recognised as one of the conditions under which our work has to be done. Practical wisdom therefore teaches that instead of trying to get rid of it, we should strive as far as possible to improve it, to lessen its faults, and to develop whatever good it may be susceptible of.

It is admitted on all hands that examinations carried on in direct connection with teaching are of great educational value, of so much value indeed that no careful teacher ever thinks of doing without them. What, therefore, in the interests of sound education, we ought to strive for, in relation to those examinations which are not connected with any system of instruction, is that they should be made, as nearly as possible, what they would be if they did form part of such a system. It is perhaps too much to expect that this should be taken as the leading principle in the case of examinations such as those, now so common in connection with various branches of the public service, which exist for the primary object, not of promoting education, but of preventing dolts and dunces from being supported at the public expense; but, besides these, there are many examinations nowadays, which, though unconnected with teaching, are professedly intended for the advancement of education. Among such examinations, those of the University of London are on many accounts the most important, and the intimate relation between them and much of our work in this College seems to me to be a sufficient reason for considering how far the influence which, through this relation, they exert upon our teaching, is beneficial or otherwise.

If any further justification be needed for discussing the educational tendency of the examinations of the University of London, beyond the general one arising from the paramount importance of the improvement of education, it may be found in the history of the University. It is doubtless known to many of my audience that the University of London was constituted, in most essential respects as it now exists, by a Royal Charter dated December 5, 1837, in order, "for the advancement of religion and morality, and the promotion of useful knowledge, to hold forth to all classes and denominations of [her Majesty's] faithful subjects, without any distinction whatsoever, an encouragement for pursuing a regular and liberal course of education." The form which this encouragement was to take was that of "ascertaining, by means of examination, the persons who have acquired proficiency in Literature, Science, and Art, by the pursuit of such course of education, and of rewarding them by Academical Degrees, as evidence of their respective attainments, and marks of honour proportioned thereto;" and it was directed that all persons should be admitted as candidates for degrees in Arts and Laws, who should produce certificates of having completed the course of instruction prescribed by the University either in *this* College or in King's College, London, or in any other such institution as might be authorised by the Crown to issue such certificates. But in 1858, the Senate of the University obtained a new charter by which they were empowered to admit candidates to the examinations for degrees in Arts, Laws, Science, and Music without requiring them to have previously pursued any prescribed course of study, or to have attended any particular place of instruction; and since that time no other qualification has been demanded of graduates of the University of London (with the exception of those who have taken degrees in Medicine) than the ability to pass the appointed examinations. I do not now propose to discuss the question whether the passing of an examination only affords as good ground for conferring academical distinction as the passing of the same examination combined with studentship at some recognised college or other educational institution; my object at present is simply to draw attention to the fact that the University of London, created in order to encourage the pursuit of "a regular and liberal course of education," no longer requires candidates for degrees in Arts or in Science to pass through any collegiate course, but considers that she sufficiently fulfils her mission by devising and carrying out into practice a system of examinations. It appears to me that this fact justifies all who are interested in the progress of sound education in demanding that these examinations should be so arranged as to encourage to the utmost possible extent thorough study and conscientious teaching.

---

[*] Introductory Lecture delivered at the opening of the Session of the Faculties of Arts and Laws and of Science, in University College, London, on Monday, Oct. 5, 1874, by G. Carey Foster, F.R.S., Professor of Physics.

The present Regulations of the University do not in all cases seem to me to fulfil this condition as completely as they might do, and I therefore think that I may suitably make use of this opportunity for trying to point out their defects as definitely as I can, and for attempting, if possible, to suggest improvements. I need hardly say, however, that whatever criticisms or suggestions I may venture to make will refer almost exclusively to the Regulations affecting that branch of science, namely Physics, with which I am specially connected. I believe, nevertheless, that the general principles which it is of greatest importance to keep in view in framing an examination in any department of knowledge are very nearly the same, and therefore I venture to hope that if the reflections which my experience of the London University examinations, both as an Examiner and as a Teacher, has suggested to me, are of any value in relation to my own subject, they may not be quite worthless in relation to others.

In order to apply to the case of Physics the general principle that examinations and direct teaching ought to be only different ways of attaining the same object, it is needful to consider first of all what reasons there may be for including the study of Physics in "a regular and liberal course of education," and what ought therefore to be the aim of teacher and examiner alike. With regard to this point, it will probably be admitted that the educational value of the study of Physics depends upon the mental discipline which it ensures, and not upon the individual facts, or even on the general laws, with which it stores the memory. It follows from the nature of the phenomena with which this science deals, that, to a much greater extent than has hitherto been the case with the phenomena of any other branch of science, the exact conditions of their occurrence have been ascertained, and the relations which they bear to one another have been expressed by definite numerical laws. In consequence of the precision which it is hence possible to give not only to statements respecting individual physical phenomena, but also to statements involving general laws, the reasoning by which the conclusions of Physics are established assumes a stricter character than can be attained in any other branch of natural science. It may be confidently asserted that, for training the mind in habits of accurate thinking, no other study can be compared with that of Physics if properly pursued; for, while it affords abundant practice in deductive reasoning of mathematical strictness, it obliges us to give no less attention to the converse process of inferring general laws from particular concrete phenomena and the direct impressions which they make on our senses. It is this combination of deductive with inductive reasoning which constitutes the special value of the study of Physics for the purposes of mental discipline. It is quite true that the deductive processes of Physics are borrowed from Mathematics, and that it shares the inductive method with all the other branches of natural science; but the greater definiteness of physical phenomena, as compared with those of other sciences, not only, as I have already said, leads to a greater definiteness in our general conclusions respecting them, but, as a further consequence, makes it easier to test the truth or falsehood of their conclusions by comparing the results deductively derived from them with the results of new experiments or observations. It may even, indeed, be thought that the comparative definiteness and precision of the problems with which the science of Physics is concerned render the study of it less serviceable, as a preparation for dealing with the complex questions which arise in the common experience of life, than the study of sciences in which the uncertainty and indefiniteness of the data leave a greater scope for the exercise of a judicious tact in the estimation of probabilities; but to maintain such an opinion would be very much like saying that in order to become familiar with the laws of chemical action and the nature of chemical combination, we ought to study the transformations of albumen and chlorophyll rather than the properties of such things as potassium, oxygen, or sulphuric acid. It is of course because physical phenomena are simpler and more accessible to investigation than those of Chemistry or Biology, that greater progress has been made in the study of them, and that the explanations that have been reached are of a higher degree of certainty and generality; but it is precisely the relatively advanced stage which has been reached by it that gives to the study of Physics its high value as an element in general education, and is the reason why it furnishes us with fuller and more instructive examples of scientific reasoning than other sciences.

The nature of the intellectual benefits that have been pointed out as resulting from this study, suggests at once the conditions that must be fulfilled in order to obtain them. If in studying Physics we really undergo, as I have said, a process of training to think correctly, this can only be through the exercise of our minds in following the demonstrably correct trains of thought whereby the general conclusions of Physics have been derived from the observed facts, and through our becoming so familiar with them that, consciously or unconsciously, we take them for our models, whatever may be the subjects to which we require to direct our minds. It follows from this that these benefits do not depend upon the direct results of experiment or observation with which the study makes us acquainted, nor upon the general laws of nature which it reveals to us, but upon the reasoning processes whereby facts and laws are connected together and both are made part of the living body of science. And from this again we see that the kind of teaching and study to be aimed at is that which enables us to trace these processes step by step and to understand their validity; while the kind to be anxiously avoided is that which stores the memory with detached pieces of information, either in the form of facts whose mutual relations are not perceived, or in the form of theoretical conclusions hung up between heaven and earth, and supported neither by revelation from above nor by demonstration from below. This latter, however, is the kind of teaching so much in demand and so frequently offered, which is known by the name of "cramming."

By way of guarding against misconception, it may be well to point out—what, however, is exceedingly obvious—that there can be no reasoning about Physics until the facts of Physics are known, and therefore that the teaching of these facts must always occupy an important place as the indispensable groundwork of all that is to follow. But still it must be remembered that, so long as we are considering the study of Physics merely as a part of general education, the facts of the science are of importance only in relation to the reasoning that is based upon them. Taken by itself, one bit of information is of about as little use in developing the mental powers as any other; it does us about as much good to be told that "heat is a mode of motion" as that "the Government of England is a limited monarchy," and to know the difference between a thermometer and a barometer enlarges the mind to about the same extent as to know how to distinguish a pitchfork from a Dutch hoe.

We may now return to consider the effect of the examinations of the University of London upon the teaching of Physics. These examinations, as we have seen, exist for the express purpose of encouraging the pursuit of "a regular and liberal course of education," or, as it may be otherwise expressed, in order to encourage good teaching and to discourage bad; and in the foregoing remarks I have tried to show as definitely as I can what meaning is to be attached to the words "good" and "bad" in relation to the teaching of Physics. The obvious conclusion, applicable to the particular point to which I now wish to ask your attention, is that examinations are to be regarded as *good* if they induce candidates to *think* about the mutual relations of individual facts and their connection with general principles; while examinations are *bad* in proportion as they lead to the loading of the memory with unconnected scraps of knowledge.

There are two ways in which the examinations of the University of London tend to affect the quality of teaching for good or for evil: first, by the general Regulations drawn up by the Senate in reference to the various examinations, including the list of subjects to be taken up and the specifications of the requirements in each subject; and secondly, the questions set by the Examiners, which form as it were a detailed commentary, authorised by the Senate, on the meaning of their own Regulations. For various reasons, the lowest examinations, or those which come earliest in the University scheme, produce the greatest effect on methods of teaching and learning; for one thing, they affect the greatest number of candidates, and they come at a part of the candidates' career when they are most dependent on external authority or advice as to the course of their studies.

THE BIBLIOGRAPHY OF SCIENCE

THERE can be no surer indication of the universal spread of science during the last few years than the large and annually increasing number of works relating to its various branches that are advertised for publication during each successive season. The considerable element which science now forms in education, in the arts and manufactures, in commerce and agriculture, and in the social economy of life, renders the knowledge of at least its rudiments absolutely necessary in almost every sphere of existence. The particulars given below will show that publishers are fully alive to the importance and value of good works in this department of literature.

Although even now we have a large quantity of educational books of varying degrees of mediocrity and excellence in almost all the commoner branches of science, and the number of works is ever increasing, yet the advance made by science makes it imperative that fresh manuals and class-books and new editions should be continually published, in order that students and workers should be enabled to keep pace with its rapid strides. The works we notice beneath range from the smallest general primer to the most elaborated and matured works in particular and specific branches of science; and among them will be found books by men of the highest reputation in their special provinces. We have endeavoured to notice every work of importance which is to be published during the next few months; but our list is necessarily incomplete; we shall, however, in future numbers note any deficiencies, omissions, or fresh announcements.

In ASTRONOMY we observe the following books:—*The Moon*, and the Condition and Configuration of its Surface, by Edmund Neison, Fellow of the Royal Astronomical Society, &c., illustrated by maps and plates. (Longmans.)—*A Primer of Astronomy*, by J. Norman Lockyer, F.R.S., with illustrations. (Macmillan.)—A new edition of *Navigation and Nautical Astronomy*, in theory and practice, by Prof. J. R. Young. (Lockwood.)—*The Transits of Venus*, a Popular Account of Past and Coming Transits, from the first observed by Horrocks, A.D. 1639, to the Transit of A.D. 2112, by Richard Anthony Proctor, B.A. Cantab., Hon. Fell. King's Coll. Lond., with twenty plates and numerous woodcut illustrations. (Longmans.)

In CHEMISTRY we are promised a new edition of *Dr. Normandy's Commercial Handbook of Chemical Analysis*, enlarged and almost re-written by Dr. H. M. Noad, Ph.D., F.R.S. &c., with numerous illustrations. (Lockwood).—A second edition of *Plattner's Manual of Qualitative and Quantitative Analysis with the Blowpipe*, from the last German edition, revised and enlarged by Prof. Th. Richter, of the Royal Saxon Mining Academy, translated by Prof. H. B. Cornwall, Assistant in the Columbia School of Mines, New York; this work is illustrated with eighty-seven woodcuts and one lithographic plate. (Sampson Low.)—*Industrial Chemistry*, a Manual for Manufacturers and for use in Colleges or Technical Schools, being a translation by Dr. J. D. Barry, of Professors Stohmann and Engler's German edition of Payen's "Précis de Chimie Industrielle;" edited throughout and supplemented with chapters on the Chemistry of the Metals, by B. H. Paul, Ph.D., with very numerous plates and woodcuts. (Longmans.)—A third enlarged edition of *A Systematic Handbook of Volumetric Analysis*, or the Quantitative Estimation of Chemical Substances by Measure, applied to Liquids, Solids, and Gases, with numerous engravings, by Francis Sutton, F.C.S., Norwich. (Churchill.)—*The Chemical Effects of Light and Photography, in their Application to Art, Science, and Industry*, by Dr. Hermann Vogel. (King and Co.)—A new edition, revised and enlarged, of *Practical Metallurgy*, by John Percy, M.D., F.R.S., Lecturer on Metallurgy at the Government School of Mines. Vol. I., Part 1. Introduction; Fuel, wood, peat, coal, charcoal, coke, refractory materials, fire-clays, &c. Vol. I., Part 2. Copper, zinc, brass. (John Murray.)

In PHYSICS and MECHANICS, Messrs. Longmans will publish the three following books:—*The Elements of Physics*, by Neil Arnott, M.D., F.R.S., the seventh edition, revised from the author's notes and other sources, and edited by Alexander Bain, LL.D., Professor of Logic in the University of Aberdeen, and by Alfred Swaine Taylor, M.D., F.R.S., Professor of Medical Jurisprudence, Guy's Hospital.—*Introduction to Experimental Physics, Theoretical and Practical*, including directions for constructing physical apparatus and for making experiments, by Adolf F. Weinhold, Professor in the Royal Technical School at Chemnitz, translated and edited (with the author's sanction) by Benjamin Loewy, F.R.A.S., with a preface by G. C. Foster, F.R.S., Professor of Physics in University College, London, with numerous wood engravings.—*Lessons in Elementary Mechanics*, introductory to the Study of Physical Science, by Philip Magnus, B.Sc., B.A. This book is adapted to the requirements of the London Matriculation, Preliminary, Scientific, First M.B., and other Examinations.

Messrs. Charles Griffin will issue *A Mechanical Text-Book*, a Practical and Simple Introduction to the Study of Mechanics, by William John Macquorn Rankine, C.E., LL.D., F.R.SS., &c., late Regius Professor of Civil Engineering in the University of Glasgow; and Edward Fisher Bamber, C.E.

In BIOLOGY we have a large number of new books and new editions, of which the following are the most noteworthy:—*The History of Creation*, by Prof. Ernst Haeckel, the translation revised by E. Ray Lankester, M.A. (King and Co.)—*Elements of Human Physiology*, by Dr. L. Hermann, Professor of Physiology in the University of Zurich, translated and edited from the sixth (yet unpublished) German edition, at the author's request, by Arthur Gamgee, M.D., F.R.S., Brackenbury

Professor of Practical Physiology and Histology in the Owens College, Manchester. (Smith, Elder, and Co.)—*Outlines of Animal Physiology*, with engravings on wood, by W. H. Allchin, M.B., M.R.C.P., Assistant Physician to the Westminster Hospital and Lecturer on Practical Physiology, Histology, and Pathology in its Medical School. (Churchill.)—*Notes of Demonstrations on Physiological Chemistry*, by S. W. Moore, F.C.S., Joint Demonstrator of Practical Physiology at St. George's Medical School. (Smith, Elder, and Co.) This work is nearly ready for publication.—The same publishers announce *The Pathological Anatomy of the Nervous Centres*, by Edward Long Fox, M.D., F.R.C.P., Physician to the Bristol Royal Infirmary, with illustrations; and a *Text-Book of Pathological Anatomy*, by John Wyllie, M.D., F.R.C.P.E., Lecturer on General Pathology at the School of Medicine, Surgeons' Hall, Edinburgh, &c.

We are glad to see that Messrs. Churchill have in the press a fifth and revised edition of Holden's well-known work on *Human Osteology*, comprising a Description of the Bones, with Delineations of the Attachments of the Muscles, &c.—The three following new works also belong to the same publishers:—*Frey's Manual of the Histology and Histo-Chemistry of Man*, a Treatise on the Elements of Structure and Composition of the Human Body, for the use of Practitioners and Students, largely illustrated with engravings on wood, translated by Arthur E. J. Barker, L.R.C.S.I., and revised by the author.—*The Student's Guide to Human Osteology*, with numerous lithographic plates, by William Warwick Wagstaffe, F.R.C.S., Assistant Surgeon and Lecturer on Anatomy at St. Thomas's Hospital.—*The Student's Guide to Practical Histology, Histo-Chemistry, and Embryology*, with engravings on wood; by H. A. Reeves, F.R.C.S. Edin., Assistant Surgeon and Demonstrator of Anatomy at the London Hospital.

The only other book we notice in this branch of science is a new edition of *Demonstrations of Anatomy*, being a Guide to the Knowledge of the Human Body by Dissection, by George Viner Ellis, Professor of Anatomy in University College, London, with 248 engravings on wood. The number of illustrations has been largely added to in this edition, and many of the new woodcuts are reduced copies of the plates in the author's work, "Illustrations of Dissections." (Smith, Elder, and Co.)

In GEOGRAPHY and TRAVELS, probably the works most looked for are *The Last Journals of Dr. Livingstone, in Eastern Africa, from 1865 to his Death*, continued by a narrative of his last moments and sufferings, taken down from the mouth of his faithful servants Chumá and Susi, edited by Rev. Horace Waller, F.R.G.S., Rector of Twywell, Northampton, with a map prepared on the spot by the author, and illustrations from his sketches. (Murray); and Sir Samuel Baker's new book, which is entitled *Ismailia*, a Narrative of the Expedition to Central Africa for the Suppression of the Slave Trade, organised by Ismail, Khedive of Egypt, with maps, portraits, and upwards of fifty full-page illustrations by Zwecker and Durand (Macmillan.)

Messrs. Sampson Low, as usual, are to the fore in books of travels. We give the titles and some particulars of seven of them:—*Turkistan*, Notes of a Journey in the Russian Provinces of Central Asia and the Khanates of Bokhara and Kokand, by Eugene Schuyler, Secretary of American Legation, St. Petersburg. This book will be profusely illustrated.—*The Straits of Malacca, Indo-China, and China*, or Ten Years' Travels, Adventures, and Residence Abroad, with upwards of sixty woodcuts from the author's own photographs and sketches, by J. Thompson, F.R.G.S., author of "Illustrations of China and its People." This work contains a narrative of the writer's personal experience and adventures in the Straits of Malacca, Siam, Cambodia, Cochin-china, and China, illustrated with over sixty wood engravings from the author's sketches and photographs. A long residence in the Straits of Malacca enabled the author to visit some of the native states, and to give an account of our important colonial possessions in that quarter of the globe, as also of his personal intercourse with the native Malay rulers, and his estimate of the value of the Chinaman and of Chinese labour in a tropical region.—*The Second North German Polar Expedition in the years* 1869—70, of the ships *Germania* and *Hansa*, under command of Capt. Koldeway, edited and condensed by H. W. Bates, Esq., of the Royal Geographical Society, and translated by Louis Mercier, M.A. (Oxon.) The narrative portion of this important work will be full of interest and adventure in the ice-fields; and, in addition to much matter of great scientific value, will give a graphic account of the hardships and sufferings of the crew of the *Hansa* after the crushing of that ship in the ice.—*Warburton's Journey across Australia*, an account of the Exploring Expedition sent out by Messrs. Elder and Hughes, under the command of Colonel Egerton Warburton, giving a full account of his perilous journey from the centre to Roebourne, Western Australia, with illustrations and a map, edited, with an Introductory Chapter, by H. W. Bates, Esq., of the Royal Geographical Society.—*Captain Tyson's Arctic Adventures;* Arctic Experiences, containing Captain George E. Tyson's Wonderful Drift on the Ice-Floe, a history of the *Polaris* Expedition, the cruise of the *Tigress*, and Rescue of the *Polaris* Survivors, to which is added a General Arctic Chronology, edited by E. Vale Blake, with a map and numerous illustrations.—*The Marvellous Country*, or Three Years in Arizona and New Mexico, by Samuel W. Cozzens, illustrated.—*The Earth as Modified by Human Action*, by George P. Marsh, being a new edition of "Man and Nature."

Mr. Murray announces *Six Months among the Palm Groves, Coral Reefs, and Volcanoes of the Sandwich Islands*, by Isabella Bird, author of "The Englishwoman in America," with illustrations.

Messrs. Trubner have nearly ready *A Peep at Mexico*, Narrative of a Journey across the Republic from the Pacific to the Gulf, in December 1873, and January 1874, by J. L. Geiger, F.R.G.S, with four maps and forty-five original photographs.

In MEDICINE, &c., the announcements are very numerous; we give the more important. Messrs. Longmans have in the press *A Dictionary of Medicine*, edited by Richard Quain, M.D., F.R.S., assisted by numerous eminent writers.

Messrs. Charles Griffin will publish very shortly *Outlines of the Science and Practice of Medicine*, a Handbook for Students, by William Aitken, M.D., F.R.S.

From Messrs. Churchill we receive notice of the following forthcoming books among a long list of others, viz.:—*Air, Water, and Sewage*, a Manual of Analysis for Medical Officers of Health, &c., by Francis Sutton, F.G.S., and William Thorp, B Sc., F.C.S.—*A Handy-Book of Forensic Medicine and Toxicology*, with numerous wood engravings, by W. Bathurst Woodman, M.D. St. And., Assistant Physician and Lecturer on Physiology at the London Hospital, &c., and C. Meymott Tidy, M.A., M.B., Medical Officer of Health and Food Analyst for Islington.—*Experimental Investigation of the Action of Medicines*, a Handbook of Practical Pharmacology, with engravings, by T. Lauder Brunton, M.D., D.Sc., Lecturer on Materia Medica in the Medical College of St. Bartholomew's Hospital.—*The Diseases of Tropical Climates and their Treatment*, with Hints for the Preservation of Health in the Tropics, by J. A. B. Horton, M.D. Edin., F.R.G.S., Staff-Assistant-Surgeon of the Army Medical Department.—*The Face, Mouth, and Throat*, the Surgical Treatment of their Diseases, Injuries, and Deformities, with engravings on wood, by Francis Mason, F.R.C.S., Senior Assistant Surgeon and Lecturer on Anatomy at St. Thomas's Hospital.—*The Student's Guide to the Diseases of the Eye*, with engravings, by Henry Power, M.B., F.R.C.S., Senior Ophthalmic Surgeon to St. Bartholomew's Hospital.—*Report on the Issue of a Spirit Ration during the March to Coomassie*, by E. A. Parkes, M.D., F.R.S., Member of the General Medical Council.—*The Student's Guide to the Practice of Midwifery*, with engravings, by D. Lloyd Roberts, M.D., Vice-President of the Obstetrical Society of London, Physician to St. Mary's Hospital, Manchester.—*Clinical Studies of Disease in Children*, by Eustace Smith, M.D., F.R.C.P., Physician to the King of the Belgians, Physician to the East London Hospital for Children.

Messrs. Charles Griffin have nearly ready *A Dictionary of Hygiene and Public Health* (with illustrations), comprising Sanitary Chemistry, Engineering, and Legislation, the Dietetic Value of Foods, and the Detection of Adulterations, based on the "Dictionnaire d'Hygiène Publique" of Prof. Ambroise Tardieu, by Alexander Wynter Blyth, M.R.C.S., L.S.A., A.R.C., Medical Officer of Health, and Analyst to the County of Devon.

Messrs. Smith, Elder, and Co. also promise us a work *On the Curative Effects of Baths and Waters*, being a Handbook to the Spas of Europe, by Dr. J. Braun, with a Sketch on the Balneotherapeutic and Climatic Treatment of Pulmonary Consumption, by Dr. L. Rohden, an abridged translation from the third German edition, with Notes, by Hermann Weber, M.D., F.R.C.P., London Physician to the German Hospital.

The following BOTANICAL BOOKS are advertised as coming out this season:—*Medicinal Plants*, by Robert Bentley, F.L.S., Professor of Botany in King's College, London, and Henry Trimen, M.B., F.L.S., of the British Museum, and Lecturer on Botany at St. Mary's Hospital Medical School. This work will include full botanical descriptions and an account of the properties and uses of the principal plants employed in medicine, especial attention being paid to those which are officinal in the British and United States Pharmacopœias. The plants which supply food and substances required by the sick and convalescent will be also included. Each species will be illustrated by a coloured plate drawn from nature. This will be published in monthly parts, and Part I. will be ready very soon (Churchill.)—*Pharmacographia*, a History of the Principal Drugs of Vegetable Origin found in Commerce in Great Britain and British India, by F. A. Flückiger and D. Hanbury, F.R.S. (Macmillan.)—*The Primæval World of Switzerland*, by Prof. Oswald Heer, of the University of Zurich, translated by W. S. Dallas, F.L.S., and edited by James Heywood, M.A, F.R.S., with numerous illustrations. (Longmans.)

In the Sciences of GEOLOGY and MINERALOGY, &c., we are promised *Geology, for Students and General Readers*, embodying the most Recent Theories and Discoveries, by A. H. Green, M.A., Professor of Geology and Mining in the Yorkshire College of Science. Part I. The Elements of Physical Geology, with upwards of 100 illustrations by the author. Part II. The Elements of Stratigraphical Geology, with upwards of 100 illustrations by the author. (Daldy, Isbister, & Co.) The same publishers also have *Geological Climate and Time*, a Theory of Secular Changes of the Earth's Climate, by James Croll, of H.M. Geological Survey; *A Treatise on Mining*, by Lottner and Serlo, of the Berlin Academy of Mining, translated from the German by Prof. Le Neve Foster and Mr. Galloway, with 268 illustrations and diagrams; and *The Creation*, or Dynamical System of the Earth's Formation, in accordance with the Mosaic Record and the latest Discoveries of Science, by Archibald T. Ritchie.—*The Origin of Creation*, or the Science of Matter and Force, a New System of Natural Philosophy, by Thomas Roderick Fraser, M.D., and Andrew Dewar. (Longmans.)—*The Dawn of Life upon the Earth*, by J. W. Dawson, LL.D., F.R.S., F.G.S., Principal and Vice-Chancellor of McGill University, Montreal, with illustrations. (Hodder and Stoughton.)

Finally, among MISCELLANEOUS BOOKS the following will probably interest the majority of our readers:—A new edition is nearly ready of *The Origin of Civilisation and the Primitive Condition of Man*, Mental and Social Condition of Savages, by Sir John Lubbock, Bart., M.P., F.R.S. (Longmans.)—*Outlines of Cosmic Philosophy, based on the Doctrine of Evolution, with Criticisms on the Positive Philosophy*, by John Fiske, M.A., LL.B., formerly Lecturer on Philosophy at Harvard University. (Macmillan.)—*On the Sensations of Tone*, as a Physiological Basis for the Theory of Music, by Prof. H. Helmholtz, translated (with the author's sanction) from the third German edition by Alexander J. Ellis, F.R.S., F.S.A. (Longmans.)—*Out of Doors*, a selection of original articles on Practical Natural History, by the Rev. J. G. Wood, M.A., F.L.S., author of "Homes without Hands," &c., with six illustrations, from original designs engraved on wood by G. Pearson. (Longmans.)—*Insects Abroad*, being a popular account of foreign insects, their structure, habits, and transformations, by the Rev. J. G. Wood, M.A., F.L.S., illustrated with 600 figures by E. A. Smith and J. B. Zwecker. (Longmans.)—*The Aërial World*, by Dr. George Hartwig. (Longmans.)—*Memoir of Sir Roderick Murchison*, including extracts from his journals and letters, with notices of his scientific contemporaries, and a sketch of the rise and progress, for half a century, of Palæozoic Geology in Britain, by Archibald Geikie, LL.D., F.R.S., Murchison Professor of Geology and Mineralogy in the University of Edinburgh, and Director of the Geological Survey of Scotland. (Murray.)—*The Physics and Philosophy of the Senses*, or the Mental and the Physical in their Mutual Relations, by R. S. Wyld, F.R.S.E., illustrated. (King and Co.)—*The Elements of the Psychology of Cognition*, by Robert Jardine, B.D., D.Sc., Principal of the General Assembly College, Calcutta. (Macmillan.)—*On Parasites in the Animal Kingdom*, by M. Van Beneden. (King and Co.)—*The Doctrine of Descent and Darwinism*, by Prof. Oscar Schmidt. (King and Co.)—*Optics*, by Prof. Lommel, profusely illustrated. (King and Co.)—*Fungi*, their Nature, Influences, and Uses, by the Rev. M. J. Berkeley and Dr. M. Cooke, profusely illustrated. (King and Co.)—*Scientific London*, an account of the History and present scope of the principal Scientific Societies and Institutions of London, by Bernard H. Becker. (King and Co.)

THE NEW REPTILE-HOUSE IN THE JARDIN DES PLANTES

THE new house for Reptiles and Batrachians in the Jardin des Plantes at Paris was opened to the public last week. It contains four divisions: two larger central, and two smaller end compartments, all connected by folding doors. The front larger compartment is fitted up in the middle with large shallow tanks for the Crocodilia, of which there are five examples of *Crocodilus vulgaris*, *C. frontatus*, *Alligator mississippiensis*, and two species of *Jacare*. In front is a row of glass cages for Snakes—Boas, Pythons, and various Colubrines. The second larger compartment is devoted chiefly to Batrachians, and contains various Salamanders (*Triton*, &c.), and a large number of Axolotls (*Siredon*). In one tank are the two celebrated specimens of this most abnormal of creatures which have got rid of their external gills and converted themselves into the Salamandroid form, *Amblystoma*. In one of the end compartments are the venomous snakes; in the other, Lacertilia of various kinds.

The cages for the Snakes are fitted up with moss, earth, and stones, which are certainly prettier and more natural than the gravel and blankets used for the same purpose in our Zoological Gardens. But the difficulty seems to be that the animals conceal themselves and are not easily extracted from their hiding-places, whereas a blanket is readily unfolded when the occasion requires, and is more easily kept clean and tidy.

There can be no question of the great improvement of this house as compared with its predecessor, nor of its superiority to the Reptile-house in our Zoological Society's Gardens, so far as concerns space and arrangement. But as regards the extent of the collection, we believe the London Society still holds its own.

NOTES

SEVENTY-FIVE cases of specimens taken by the *Challenger* expedition have been received at the Admiralty from Prof. Wyville Thomson.

THE vessel bearing the French Transit Expedition, under charge of M. Janssen, was caught in the typhoon which swept over Hong Kong on Sept. 23; although the ship appears to have suffered, the *personnel* and apparatus are happily safe. We may state that M. Janssen's wife accompanies him.

FROM the list of the lectures to be delivered during the present term at Oxford, on subjects connected with Natural Science, the want of organisation among the teachers of its different branches is but too apparent. The four biological courses—by Prof. Rolleston (1), Mr. Lankester at Exeter College (2), Mr. Barclay Thompson at Christ Church (3), and Mr. Chapman at Magdalen (4)—are to be on (1) The Comparative Anatomy of Vertebrata, (2) The Structure and Genealogy of Vertebrata, (3) Ichthyic Anatomy, (4) The Anatomy of Vertebrata; so that no provision is made for those who are studying Human Anatomy, nor the Invertebrata. Histology fares hardly any better, for its rapid progress during the last few years has quite overthrown the practical microscopy of ten years ago. The Professor of Experimental Philosophy and Dr. Lee's Reader in Physics are also both to lecture on Electricity.

SIGNOR L. M. D'ALBERTIS, the Italian naturalist, who recently ascended the Arfak Mountains in New Guinea and made so many important discoveries, is now at Genoa preparing for a fresh expedition into the same country, and will leave Europe in about a month's time. On this occasion the traveller will endeavour to penetrate into the southern part of that *terra incognita*, that is into the district adjacent to Torres Straits, where mountain-ranges of considerable altitude are known to exist. Should he succeed in his arduous enterprise, there can be no doubt that he will reap an abundant harvest, as the zoology of this part of New Guinea is absolutely unexplored.

SIGNOR D'ALBERTIS' former companion, the distinguished botanist, Dr. Beccari, is still in the East. His last letters, dated at Macassar in August last, announce his recent return there from an excursion into the south-eastern districts of Celebes. We believe that Dr. Beccari also is preparing for a fresh expedition to New Guinea.

UNDER the sanction of the trustees of the British Museum, the course of twelve lectures on Geology, which the liberal endowment of Dr. Swiney makes *free to the public*, will this year be delivered by Dr. Carpenter, at the Birkbeck Literary and Scientific Institution, Southampton Buildings, Chancery Lane, on Saturday evenings, at half-past seven o'clock, commencing Saturday next. We understand that the main purpose of the course will be to elucidate the past history of the earth by the study of the changes at present in progress; and that the course will include an account of the lecturer's own researches in the deep sea. It will be illustrated by an extensive series of photographs and paintings, exhibited by the oxy-hydrogen lantern.

THE South African correspondent who sent us the Natural History Notes which appeared in NATURE, vol. x. p. 486, is Mr. J. P. Mansell Weale.

IT has been decided to publish, as a yearly volume, a Record of Works on Geology, Mineralogy, and Palæontology, British and Foreign. The first volume will be printed by the middle of 1875, and will contain short abstracts or notices of papers, books, maps, &c., published during the year 1874. It is estimated that this volume will contain from 200 to 300 pages, and that its price will be 10*s.* 6*d.* The gentlemen named below have volunteered to assist in the work, which has already been begun. Those marked * have taken charge of various sections (as sub-editors), and the last has undertaken the post of general editor:—* W. Carruthers, F.R.S. (British Museum); C. E. De Rance, F.G.S. (Geological Survey); R. Etheridge, jun., F.G.S. (Geological Survey of Scotland); D. Forbes, F.R.S.; Prof. Geikie, F.R.S. (director of the Geological Survey of Scotland); * Prof. A. H. Green, F.G.S.; Prof. T. R. Jones, F.R.S.; A. J. Jukes-Browne, F.G.S. (Geological Survey); * G. A. Lebour, F.G.S.; * L. C. Miall (Leeds Museum); E. T. Newton, F.G.S. (Jermyn Street Museum); Dr. H. A. Nicholson, F.G.S.; * F. W. Rudler, F.G.S. (Jermyn Street Museum); E. B. Tawney, F.G.S. (Bristol Museum); * W. Topley, F.G.S. (Geological Survey); Henry Woodward, F.R.S. (British Museum); H. B. Woodward, F.G.S. (Geological Survey); W. Whitaker, F.G.S. (Geological Survey). The work will be greatly helped if Provincial Societies and Field Clubs will forward copies of their publications to the editor. It is hoped, from the low price, that the number of subscribers will be enough to cover the expenses of printing; but should this not be the case, a number of eminent scientific gentlemen have kindly consented to act as guarantors. Names of intending subscribers, and of societies and institutions that will purchase the Record for 1874, will be gladly received by the editor.

MR. WILLIAM DITTMAR, F.R.S.E., Lecturer on Chemistry at Owens College, Manchester, has been appointed Professor of Chemistry at Anderson's University, Glasgow, in the place of Dr. Thorpe, who has been elected Professor of Chemistry at the Yorkshire College of Science.

DR. WILLIAM STIRLING has been appointed assistant to Dr. Rutherford, the newly elected Professor of Physiology in the University of Edinburgh.

DR. JAMES APJOHN has resigned his appointment of Professor of Chemistry in the Medical School of Trinity College, Dublin.

MR. BRYCE M. WRIGHT, the well-known collector of fossils, who for some time past had been far from well, died last week.

A NEW wing has been quite recently added to King's College, London, by means of which considerable improvements have been made in the Physiological Laboratory and the Dissecting Room.

Two scholarships in Science, of the value of 100*l.* each, have this year been awarded at St. Bartholomew's Hospital; one to Mr. Coates, of Balliol College, Oxford, the other to Mr. Saunders, of Downing College, Cambridge, these gentlemen having been coupled as of equal merit for the first place in the competition.

THE following gentlemen have been elected to the vacant Natural Science Postmasterships in Merton College:—Mr. J. Larden, of Rugby School, and Mr. A. Macdonell, of Aberdeen University. The Delegates of Unattached Students of Oxford University give notice that the Master and Court of Assistants of the Clothworkers' Company have offered three exhibitions of 50*l.* a year each, tenable for three years, for the encouragement of the study of natural science; the first examination to be held at the beginning of the Hilary Term 1875; at which time one exhibition will be awarded. Gentlemen who shall have matriculated in the present term, or who have not yet matriculated, are eligible for this exhibition.

The following sonnet on the late Dr. Jeffries Wyman appears in the New York *Nation*, with the initials "J. R. L.":—

> "The wisest man could ask no more of Fate
> Than to be simple, modest, manly, true,
> Safe from the Many, honoured by the Few;
> Nothing to court in World, or Church, or State,
> But inwardly in secret to be great;
> To feel mysterious Nature ever new,
> To touch, if not to grasp, her endless clew,
> And learn by each discovery how to wait;
> To widen knowledge and escape the praise;
> Wisely to teach, because more wise to learn;
> To toil for Science, not to draw men's gaze,
> But for her lore of self-denial stern;
> That such a man could spring from our decays
> Fans the soul's nobler faith until it burn."

A telegram from Berlin states that Major von Mechow will shortly start by sailing vessel from Rotterdam to succeed Dr. Lohde, who is in ill health, in the military command of the scientific expedition which left Europe in June 1873, under the leadership of Dr. Gussfeldt, for the exploration of Central Africa. The Berlin African Society will also send out a second expedition under the leadership of Captain von Homeyer, which will leave at the end of December. It will first proceed to Canandge, on the frontier of Angola, and will endeavour to reach the capital of Muata-Jamvo.

The Austro-Hungarian explorers of the North Pole are preparing a popular edition of their adventures, as well as a scientific narrative.

We learn from *Iron* that a scheme has been recently devised for supplying London with an inflammable mixture of gases to replace coal. The new gas, termed "pyrogen," consists of a mixture of nitrogen and carbonic oxide, three-fourths by weight consisting of the latter gas. The temperature of combustion of the mixture is stated to be 2,700° C.; and for heating purposes the flame of the burning gas is to be allowed to raise some good radiating substance to incandescence in an ordinary grate. It is justly pointed out that with our present arrangements three-fifths of the available heat of coal are wasted, but, on the other hand, it must not be forgotten that on the proposed plan the force evolved in the oxidation of the carbon (in whatever form it is made use of) to carbonic oxide is likewise wasted. We should prefer, on the whole, to see some feasible plan for utilising the waste heat of coal, as the highly poisonous nature of carbonic oxide would, in the absence of all other objections, be a serious obstacle to its introduction into our dwelling-houses.

At an influential meeting held at Manchester on Monday, to take measures to secure some permanent memorial of the late Sir William Fairbairn, it was resolved to raise funds for the purpose by public subscription, and "that the permanent memorial of Sir William Fairbairn be in the form of a statue of such a character and to be placed in such a position as may be hereafter determined, and also for a scholarship or some other suitable endowment in connection with the Owens College." It was understood that the scholarship or endowment should have special reference to the teaching of engineering or pure mechanics.

Mr. John Horne, of the Botanic Garden, Mauritius, who is now on a botanical expedition in the Seychelles, writing to Dr. Hooker, says that he has visited the islands of Silhouette, Praslin, and Félicité, searching them from the sea-shore to the tops of the highest hills, in Silhouette up to 2,200 ft., at which elevation Pitcher-plants abound, hanging in immense clusters over every stone, bush, and tree. Flowers of these Nepenthes were obtained, and arrangements made for procuring a good supply of plants. When these materials come to hand it will be seen whether the Nepenthes of Silhouette is different from the *N. wardii* which grows in Mahé. The tops of these mountains where the Pitchers grow have a perpetual moisture hanging over them, being almost constantly enveloped by mist and rain.

We have received an excellent little Italian work—price only two francs, notwithstanding its many illustrations. It is entitled "Parassiti Interni degli Animali Domestici," and is a translation of the well-known little English work on the subject, by Dr. Spencer Cobbold, F.R.S. The Italians are very anxious to make themselves acquainted with English scientific works, and this translation by Dr. Tommasi, as well as the admirable translation of Huxley's "Vertebrate Anatomy" by Prof. Giglioli, show their earnestness.

The fifth volume of the "Annali del Museo Civico di Storia Naturale" of Genoa, just issued, is occupied with an excellent memoir on the Ornithology of Borneo, prepared by Count Tommaso Salvadori, of Turin. The memoir is based on the collections made in Sarawak in 1865 and subsequent years, by the Marquis Giacamo Doria and Dr. Odoardo Beccari, which contained about 800 specimens. All previous authorities on the birds of Borneo have been consulted, and the result is a complete *résumé* of all that is yet known upon the ornithology of this most interesting country, which will be highly acceptable to naturalists.

At two o'clock p.m. on the 18th inst. a severe shock of earthquake was felt at Malta. There was a heaving motion, accompanied by an explosive noise resembling the bursting of a shell. Eight slight shocks followed later. Several buildings are injured, but no casualties are reported.

A telegram, dated Bombay, Oct. 17, states that a cyclone in Bengal has caused a total interruption of telegraphic communication with Calcutta. Fifty miles of the line are reported to have been blown down, and a passenger train has been thrown off the rails. No further details of the damage done have yet been received.

The Council of the Labour Representation League have drawn up a Report founded upon the resolutions adopted by the members at a meeting held some weeks since touching the endowed schools in their relation to technical education. The Report, which deals very fully with the question, and which will shortly be published *in extenso*, recommends a scheme of technical training under four heads, viz.—1. In our elementary board schools. 2. The secondary industrial schools. 3. The higher endowed schools, such as Eton, Harrow, &c. 4. The Science and Art Department at South Kensington. The scheme will be submitted to a general meeting of workmen and others interested in the question, for discussion and approval. The Council of the League express themselves very sanguine as to the beneficial results that would follow the adoption of the scheme. In connection with the subject of technical education we may state that the opening meeting of the members of the Artisans' Institute was held on the 14th inst., in the premises of the institution, Castle Street, St. Martin's Lane. The meeting was addressed by the Rev. H. Solly, Mr. Samuel Morley, M.P., Dr. Carpenter, and others, and the promoters are sanguine of its success in educating and elevating skilled workmen.

On Monday evening a public meeting was held in the hall of Clanricarde College, Pembridge Square, Bayswater, Dr. J. H. Gladstone, F.R.S., presiding, to establish a popular society in

West London for the advancement of natural history and physical science. There was a very good attendance, chiefly of members of the various London field clubs. A number of ladies have been received as members, and working men are represented on the committee.

ACCORDING to the *Belgique Horticole*, Dr. Candèze has invented a small photographic apparatus, which he calls a "scenograph," which consists simply of a stick and of a camera the size of an opera glass. To photograph a plant or other object, it is sufficient to place it in the focus of the scenograph for a minute or two. The negatives, it appears, can be purchased ready prepared.

THE opening of the School of Horticulture at Versailles, which was to have taken place on Oct. 1, is postponed till Dec. 1.

DR. A. CORLIEU states, in *La France Médicale* for Sept. 30, that he had occasion to search the registers of the parish of Saint Antoine, preserved in the National Library. It was in the cemetery of the Innocents, in that parish, that the dead bodies from the Hôtel-Dieu were interred; and Dr. Corlieu has ascertained that during the first six months of 1694 the deaths in the hospital amounted to 11,696. In 1873, during the same space of time, the mortality amounted to 770 for 925 beds.

THE additions to the Zoological Society's Gardens during the past week include a Chacma Baboon (*Cynocephalus porcarius*) from South Africa, presented by Mr. J. D. Lloyd; a Ducorps' Cockatoo (*Cacatua ducorpsi*) from the Solomon Islands, presented by Mr. F. J. Dean; two Lions (*Felis leo*) from South Africa; a Malbrouck Monkey (*Cercopithecus cynosurus*) from West Africa; a Sun Bittern (*Eurypyga helias*) from South America, deposited; two European Rollers (*Coracias garrula*), European; a Naked-throated Bell-bird (*Chasmorhynchus nudicollis*) from Bahia; a solitary Tinamou (*Tinamus solitarius*) from Rio de Janeiro, purchased.

SCIENTIFIC SERIALS

THE *Quarterly Journal of Microscopic Science* for this month commences with two articles which are of special interest to embryologists, and therefore to biologists generally. The former of these is by Mr. F. M. Balfour, entitled "A Preliminary Account of the Development of the Elasmobranch Fishes;" it occupies about forty pages, and is fully illustrated. The investigations were conducted at the Zoological Station at Naples, which illustrates the value of that institution, and the justifiableness of Dr. Dohrn's enthusiasm. The earliest stages of development are those most minutely described. The points of greatest interest made out are the following:—(1) The epiblast of the blastoderm in that part which corresponds to the caudal extremity of the future embryo, folds round inwards and becomes continuous with the deeper layers; which leads the author to conclude that, as the hypoblastic origin of the alimentary canal is connected with the presence of a food-yolk, and in origin its those animals which develop an "anus of Rusconi" is not so, the former is but an adaptation. (2) The notochord is shown to be developed from the hypoblast, the mesoblast forming a mass on each side of it. This may depend upon the mesoblast, whose lateral columns just referred to, are "split off, so to speak, from the hypoblast," also developing a median independent sheet; or it may be, which unbiassed observation undoubtedly supports, that the notochord is a true hypoblastic structure. The former of these views, as the author remarks, "proves too much," since it is clear that by the same method of reasoning we could prove the mesoblastic origin of any organ derived from the hypoblast and budded off into the mesoblast. If Mr. Balfour's fundamental fact is verified, it will much modify the argument as to the homology of organs as based upon their embryonic origin. (3) The medullary groove is quite flattened out in the cephalic region at the time that the canal is fully formed in the caudal. This paper is well worthy of careful study.—Mr. Ray Lankester writes on the development of the pond snail (*Lymnæus stagnalis*), and on the early stages of other mollusca. He begins by describing the shell-gland, which is situated below the developing shell; he shows its presence in Lamellibranchs, Gasteropods, Pteropods, also in the Brachiopoda and *Loxosoma*. From this the question is asked whether it in any way corresponds to the pen of the Dibranchiate Cephalopoda and the internal shell of *Limax*. Reasons are given in favour of the plug, which is always found to occupy the shell-gland, being developed into the latter; but with regard to the former, the author, from originally holding the opinion that it has a similar origin, now thinks differently for the following reasons:—The pen of *Loligo* must correspond to the guard of the Belemnite, in which the phragmacone is aborted. This guard is only a sheath to the phragmacone, which again corresponds to the whole shell of *Spirula*. The shell of *Spirula* must have been preceded by the shell-gland, therefore the plug of the latter cannot have been the direct origin of the *Loligo* pen. The latter part of the paper discusses the development of the pond-snail in detail.—Mr. E. A. Schafer describes an ingenious and much-improved microscope warm-stage, in which a mercury valve regulates the gas supply to a small circulating boiler. He remarks that much of the cooling is produced by the proximity of the objective, and suggests that this may be warmed by coiling a tube round it. It has always occurred to us to ask whether the heating of objectives does not injure, for the time being, their optical powers; as they are constructed so as to be achromatic, &c., at the average temperature of the air, and very slight differences must produce material changes in the distance between the lenses and their shape.

Bulletins de la Société d'Anthropologie de Paris, fascicule v. tome 8, 1874.—M. Topinard concludes his paper on the anthropology of Algiers, by drawing attention to the five periods which characterise the anthropological history of the colony, and which are those of the brown-skinned Kabyles; the light-skinned Kabyles; the Numidians, to whom we must refer the greater number of the Berber inscriptions hitherto found; the Romans, Arabs, and Turks; and lastly, the Aryans. M. Topinard is of opinion that in the fair and dark skinned Berbers we have a kindred race with our oldest West-European races, and that therefore, with due regard to locality, we have evidence that European colonies could be made, like those tribes, to flourish in various parts of Algiers. In the meanwhile, however, as General Faidherbe has remarked, it becomes a question of political as well as ethnological importance to investigate and, if possible, arrest the causes which are diminishing the numbers of the native population, whose existence is the more important from their being the best able to bear the climate and cultivate the soil. M. Topinard considers that the mortality among the native races is not to be referred with any special prominence to diseases introduced by Europeans, but is due very much more to a natural scrofulous diathesis antecedent among them, to any imported constitutional taint, while famine, war, and many other causes depending upon political conditions are probably the most important agents in the process.—M. de Mortillet has recalled the attention of the Society to M. l'Abbé Bourgeois' assumed evidence of the existence of man at the base of the Miocene or mean Tertiary, while he presented to them one of the latest of the Abbé's finds of flint implements from the Miocene beds at Thenay, and which in its longitudinal lines showed unmistakable traces of cutting. The speaker pointed out that since the foundation of the calcareous beds at Beauce, and the deposit of the flints at Thenay, the mammalian fauna has been renewed at least three times, while the differences between the extinct and living fauna are sufficient to justify the acceptance of the supervention of specific genera. The question of the existence of man in the mean Tertiary period rests, however, for the present, open, and must await further discoveries of a less questionable nature before it can obtain an unassailable solution.—M. Onimus, in a paper on language, has considered at length the importance of reflex action generally on all phenomena of the nervous system and on the intellectual functions, illustrating his point by reference to the changes in the faculty of speech which give rise to aphasia, and considering the manner in which the latter lesion is modified by the previous and normal mental condition of the patient. This number also contains a suggestive paper, by Madame C. Royer, on the mathematical laws of reversion through atavism; notes by M. Bataillard on the Gipsies of Algiers; and a report of the hairy dog-man of Kostroma, in whom an abnormal development of the hair of the head and the down on the face and neck, combined with considerable prognathism, has similated the characters of the canine head.

The *Bulletin de la Société d'Acclimatation de Paris* for July devotes a considerable portion of its space to the description of an ostrich farm at the Cape of Good Hope. This industry is largely extending in that colony, and yields excellent results. —M. Maumenet gives a valuable contribution in the shape of a paper on the various plants acclimatised by him at Nîmes, in the province of the Gard. Bamboos, Eucalyptus, palms, and several new and useful Chinese plants and vegetables, are among his successful attempts at acclimatisation.—M. Martinet gives details of the mode of cultivating the *Erythroxylon coca* in Peru, a vegetable which the French are desirous of introducing into Algeria and French Guiana.—M. Collenot suggests, as a means of staying the ravages of the Phylloxera, that instead of introducing American vines the wild vines abundant in many parts of France should be carefully cultivated; they produce, in a wild state, excellent fruit, and as they are very hardy, he thinks that they would withstand the attacks of this pest.—A Japanese tree, the Sophora (*Styphnolobium japonicum*), is recommended for cultivation as rivalling the Eucalyptus in many respects. The wood is very hard, and a tree planted in France thirty-five years ago is now 21 ft. in circumference. It resists cold and drought with equal facility.—The silkworm is being acclimatised in the Baltic provinces, and some species of this caterpillar seem able to withstand the cold with ease.

SOCIETIES AND ACADEMIES

London

Royal Microscopical Society, Oct. 7.—Charles Brooke, F.R.S., president, in the chair.—A paper, by Mr. Alfred Sanders, entitled "Supplementary Remarks on the Appendicularia," was read to the meeting by the secretary, in which the author corrected several observations made in the course of a previous paper, and gave an exhaustive description of a species which he believed to be different from any hitherto described, although he refrained at present from naming it as new.—A paper by Mr. Kitton, of Norwich, was also read by the secretary, upon some new species of diatoms found in deposits sent from New Zealand by Mr. H. R. Webb and by Capt. Perry from Colon.—Mr. Slack made some observations on silica films prepared from a solution containing four parts glycerine to one part water, and pointed out the difficulty of obtaining clear definition of the forms presented when high-power objectives of large angle were employed, whereas those with small angular aperture gave good results.—Mr. Stewart drew the attention of the Fellows to a remarkable living organism exhibited in the room by Mr. J. Badcock, of the nature of which very considerable doubt was entertained, the prevailing opinion being that it was either an entozoon or the larval form of some unrecognised animal.

Leeds

Naturalists' Field Club and Scientific Association, Oct. 13.—Mr. Edwd. Thompson, vice-president, in the chair.—A lecture was delivered by Mr. Samuel Jefferson, F.C.S., upon "Volcanic Phenomena." After giving the more familiar facts with regard to the shape and formation of volcanic cones, the nature of the ejected materials, the periods and frequency of eruptions, and the distribution of volcanic energy, and after an exposition of the chief hypotheses which have been framed with regard to the internal condition of our earth, Mr. Jefferson pointed out a coincidence which had not to his knowledge been previously noticed, that the equatorial diameter between the two centres of intensity of volcanic energy, Java and Quito, is shorter by two miles than that drawn at right angles through Africa. Mr. Jefferson explained his views at some length.

Philadelphia

Academy of Natural Sciences, June 2.—Dr. Ruschenberger, president, in the chair.—"Poisonous character of the flowers of *Wistaria sinensis*."—Mr. Meehan remarked that there was a popular belief that the flowers of the *Wistaria sinensis* were destructive to bees. He had himself seen hundreds of dead bees under large flowering plants. He was struck with the fact this season that none were dead under similar circumstances. The flowers were continually visited by the honey bee and others, without, so far as he could see, any fatal results following. It was clear, therefore, that whatever might be the cause of the death of these insects under some circumstances, it could not be from the honey alone.—"Growth of the *Cnicus arvensis*, Hoff." In regard to the rapidity with which plants sometimes grew, Mr. Thomas Meehan observed that, though it was well known that the Canada thistle spread surprisingly, there had been no figures giving its exact growth placed on record. From experiments he found that it spread at an average rate of about three-fourths of an inch of growth per day, equal to maize or other rapid-growing vegetation above ground.

June 16.—Dr. Ruschenberger, president, in the chair.—Prof. Leidy made remarks on the revivification of *Rotifer vulgaris*, showing that when the animals are actually dried they are incapable of being revivified.—Prof. Cope mentioned the capture of a young *Balæna cisarctica*, of forty-eight feet in length, in the Raritan River, near South Amboy. He was informed that the whale was entirely black, and the dorsal line without irregularities.—Prof. Cope explained the distinctive features of the genus Symborodon, one of the gigantic horned mammalia of Colorado, as compared with Titanotherium, exhibiting typical specimens of the latter from the Academy's museum, showing four inferior incisor teeth, while the lower jaw of Symborodon does not possess any.

Paris

Academy of Sciences, Oct. 12.—M. Bertrand in the chair.—The following papers were read:—The enunciation of the principle of the theory of *timbre* is due to Monge, by M. H. Resal.—Letter from M. Langley, director of the Alleghany Observatory, United States, on cyclonic movements, by M. Faye. This paper was an extension of the author's theory of sun-spots. The laws of fluids in rotatory motion round a vertical axis are shown to apply to these phenomena.—M. Daubrée made some remarks in connection with the foregoing paper concerning the indications of circular motion traced in the diluvian deposits of the neighbourhood of Paris.—Critical observations on the employment of the tincture or powder of guiacum for testing the purity of "*kirschenwasser*," by M. Boussingault.—M. C. Sédillot communicated a surgical paper on the subject of preventive trepanning.—Presence of the genus Lepisosteus among the fossils of the Paris basin, by M. P. Gervais.—External linear extraction, simple and combined, of cataract; a surgical memoir, by M. R. Castorani.—Proportion of real to sulphated ashes in the products of the sugar industry, by M. Ch. Violette.—Communications relating to the destruction of Phylloxera were received from MM. Maurice Girard, Mouillefert, Balbiani, &c., upon which remarks were offered by M. Dumas.—New experiments with alkaline sulphocarbonates for the destruction of Phylloxera; method of employing them, by M. Mouillefert.—Researches on the action of coal-tar in the treatment of phylloxerised vines, by M. Balbiani.—On the employment of electro-diapasons of variable periods as tonometers and electric contact breakers, by M. E. Mercadier.—Attempted theory of the formation of the secondary facets of crystals, by M. Lecoq de Boisbaudran.—Microscopic study and proximate analysis of a pumice from Vesuvius, by M. F. Fouqué. Under the microscope this stone was seen to be composed of a multitude of crystals of amphigene united by an amorphous vitreous substance; of crystals of hornblende, pyroxene, peridote, oxide of iron, feldspath, and brown mica irregularly distributed through the mass. An analysis of the amphigenetic crystals proved this mineral to be rich in sodium and calcium; the amphigene from the tufa of Somma is generally potassic.

THURSDAY, OCTOBER 29, 1874

METEOROLOGY IN FRANCE

WE hail with much satisfaction the movement which has just been made by the French Government in the direction of a more effective organisation than has hitherto existed for the investigation of the meteorology of France. The best results may be expected from the step just taken, which is detailed in the printed documents quoted below,* and when we consider the great contributions made to practical meteorology by Le Verrier, the distinguished head of the Paris Observatory, in the *Bulletin International*, the *Atlas des Mouvements Généraux de l'Atmosphère*, and the *Atlas des Orages* originated under his direction, we may rest assured that these hopes will be fully realised.

In the decree of February 13, 1873, in which the basis of the reorganisation relative to the meteorology of France was laid down, occurred the following resolutions :—

> "1. The investigation of the great movements of the atmosphere and meteorological warnings for the seaports and for agriculture are remitted to the Observatory of Paris.
>
> "2. The working out of the meteorology of the various river-basins of France, and cognate inquiries, is handed over to Commissions representing the different regions and departments of the country, the organising of which the Council of the Observatory is commissioned to prosecute."

In carrying out these resolutions, the meteorological warnings to the seaports were re-established by the Observatory on May 17 of the same year. The duty of issuing meteorological announcements to all departments for the benefit of agriculture, especially in time of harvest, was recognised, and it was at the same time suggested that an inquiry be set on foot with the view of organising a system by which this could be effectually done.

As regards the second resolution, a systematic inquiry into the climate of France had been organised in 1865 by the appointment of Departmental Commissions, and the establishment of a system of observations chiefly by the primary normal schools. At first, when the Departmental Commissions were yet imperfectly organised, it was found necessary to concentrate the observations made over the country in the Observatory of Paris, which undertook their discussion and publication; but this system, which was forced on the Observatory at the time, could not be indefinitely continued with advantage. The grounds for this opinion are stated in these words :—

> "From 1869 the Observatory continued to point out that the discussion of the climatic conditions of the different river-basins of France could not be concentrated in Paris with advantage. It seemed necessary that the large body of skilled meteorologists that had been formed during the four years which had elapsed should boldly take the observations into their own hands, in order to discuss them and deduce from them the scientific truths they may be shown to teach. It was not merely from the advantages which would accrue to meteorology itself by adopting this line of action that the effort towards decentralisation was put forth, but from the intimate bearing which the partition of the work of meteorological inquiry over the whole breadth of the country had on the scientific movement of France, in favouring the spirit of original inquiry and research without which no nation can take a high position in science."

The circumstances which followed hindered the carrying out of these proposals. Subsequently, however, the matter has been resumed and dealt with successfully in several parts of the country, particularly in the basin of the Meuse and over the western sea-board of the Mediterranean, by concerted action on the part of the five departments of Hérault, Gard, Aude, Pyrénées-Orientales, and Lozère. The Astronomical Commission nominated for the purpose of proposing the best measures to be taken in reorganising the astronomical department entered into the same view, and recommended further that inquiries referring to the climate of France be remitted to Regional Committees appointed by departments grouped together according to the river-basins.

> "But it must be observed that the proposed institution of Regional Committees will in no way interfere with the Departmental Organisation, but is intended, on the contrary, to give greater weight and vigour to the operations of the Departmental Commissions, in that united action in certain lines of inquiry is thereby facilitated; it being evident that the area embraced by a single department is too small for the proper study of many of the widespread meteorological phenomena which pass across it. The local Commissions have repeatedly drawn attention to this great disadvantage; the organisation by regions will, however, henceforth give to the departments the means of publishing the results of their inquiries in a more complete form. In correcting the system of centralisation which had been carried to so great an excess, it is not intended to leave the Commissions to themselves, with no connecting link between them and the Central Administration. On the contrary, the Observatory of Paris is specially instructed to be in active and fruitful correspondence with the Departmental Commissions, and to give assistance, as far as the Commissions may desire, in organising them by regions."

The programme, thus briefly sketched, has been only imperfectly followed out, solely on account of the pecuniary difficulties. But these difficulties the National Assembly has now removed by authorising the necessary funds. What then is now required, and what is now asked by the Minister of Public Instruction, is that the Prefects enter in the departmental budgets such a sum as may in each case be required by the Commission, and we are glad to learn that there is no doubt that the request will be generally acceded to. M. de Cumont concludes his letter with the remark · "I shall act in concert with my colleague, the Minister of the Interior, in carrying out the propositions of the decree of Feb. 13, 1873, to secure the regular despatch of the meteorological warnings to those departments whose scientific Commissions are put in possession of the requisite funds to enable them to take advantage of the warnings in the interest of agriculture."

In the meantime, the Observatory has hastened the resumption of the publication of the "Atlas Météorologiques de la France," which has been stopped for some years. To make up for lost time, the first issue, which is ready for delivery, embraces the three years 1869, 1870, and 1871, and consists of four parts, viz. :—

---

* "Letter from M. A. de Cumont, Minister of Public Instruction, to the Préfets of the Departments, Paris, October 9, 1874." "Letter from M. Le Verrier, Director of the Paris Observatory, to the Presidents of the Meteorological Commissions of the Departments, Paris, October 9, 1874."

(1) Discussion of the thunderstorms (*orages*) of these years, illustrated with forty-six maps. (2) Hailstorms, with three maps. This part of the work, which is of so much importance to agriculture, has been unfortunately neglected for some time, but is now to be vigorously prosecuted. (3) Report on the climatic observations made in France, and particularly on the distribution of rain, with four maps. (4) Meteorological memoirs and documents (thirteen in all), contributed by different meteorologists of France and other countries, a section of the work which is expected to receive a fuller development in future issues.*

A noteworthy feature of the publication consists in the fact that the materials which make it up have been collected under the auspices of the Departmental Commissions, and in great part discussed by them. This is, particularly for such a country as France, an admirable arrangement, since there is no European country the working out of the meteorology of which presents a more complex problem, owing to the great diversity of the climates of its different regions; and further, the agricultural interests of no other country would benefit more than those of France, were a correct knowledge of its climate generally disseminated among the people. Now, this feature of the publication gives the local colouring to the reports which is fitted to arrest general attention and secure the putting forth of those local efforts by which alone the meteorology of France can be satisfactorily worked out.

It may be here pointed out that the French meteorological organisation is based on the Commissions which have been appointed in each of the departments; it being to them that the Government, in the decree of Feb. 13, 1873, has remitted the working out of the meteorology of the different river-basins, and inquiries connected therewith. They are invited to unite together for certain objects into Regional Commissions, for the purpose of imparting to their investigations greater breadth and exactness. They are not put under the Central Administration at Paris in the sense of being controlled by it, but are connected with it in order that they may be aided by it in cases where aid is needed. The Departmental Commissions have free automatic action in working out the problem of the local climates of the respective districts which have been entrusted to them.

The programme assigned to the Central Observatory of Paris, consisting of the investigation of the great movements of the atmosphere, and meteorological warnings for the seaports and for agriculture, is too limited in its scope; and we cannot suppose that its illustrious head will be satisfied till he has succeeded in including in the regular work of the Observatory those physical researches we have already strongly advocated in NATURE (vol. x. p. 99) as an indispensable part of the work to be undertaken by the Central Meteorological Office of each country, and which have been more recently and ably stated by Prof. Balfour Stewart and Col. Strange (pp. 476 and 490).

In the same article we urged the necessity of the State and the country working together; indeed, in no other way is it possible successfully to work out the great national questions of storms and of local climates in their bearings on the health, productions, and commerce of the country. In France we see that this essential requisite, of the State and the country working together, has been effected, and it may not be irrelevant to add that the French Government has clearly recognised the position that unaided voluntary efforts are insufficient of themselves to cope with the subject, and that if the undertaking is to be conducted in a manner worthy of the nation and of the ends to be subserved by it, it must be supported with aid from the public funds.

MAREY'S "ANIMAL MECHANISM"*

Animal Mechanism. By E. J. Marey. "The International Scientific Series." (London: Henry S. King and Co., 1874.)

II.

IN his treatment of aërial locomotion, Prof. Marey has been even more successful than in his investigations with regard to progression on land. Nearly two centuries ago the general principles of this subject were very ably worked out by Borelli, who, after having shown that in the wing the anterior margin is rigid whilst the posterior portions are more and more flexible as they go backwards, inferred, as will be self-evident to all, that in the downward stroke of the flying bird the plane of the wing becomes directed downwards and backwards on account of the hinder margin yielding slightly to the resisting air. It not having struck him that the wing was elastic in its horizontal as well as its vertical direction, Borelli assumed that the stroke was strictly vertical.

By a series of experiments, the logical sequence and convincing power of which are perhaps unequalled in any other extant biological problem, Prof. Marey has been able to demonstrate the effects of the horizontal yieldingness of the wing, and to prove that in insects the stroke, instead of being, as Borelli assumed, a simple vertical line, is a vertical figure of 8. In proof of this original and, at first sight, unexpected observation, he shows that if the tip of the wing of a wasp be gilt, and the insect allowed to buzz in a beam of sunlight, a very elongated vertical figure of 8 image is seen, as in Fig. 1, to be produced by the reflecting tip of the rapidly moving wing; "sometimes, indeed, the wing seems to move entirely in one plane, and the instant afterwards the terminal loops which form the 8 are seen to open more and more. When the opening is very large, one of the loops usually predominates over the other; it is generally the lower one which increases, while the upper diminishes. Indeed, by a still greater opening, the figure is occasionally transformed into an irregular ellipse, at the extremity of which we can recognise a vestige of the second loop."

There is still more to be learnt from this simple experiment. By carefully gilding one surface of the wing alone, the buzzing wing, when intensely illuminated, exhibits the figure of 8 of unequal intensity in its two moieties, as seen in Fig. 1; so that it resembles the figure printed thus, 8, if its thick part be considered to represent that which is most illuminated, and its thin part the darker half. This result can only be produced by the plane of the wing being different in the up and down strokes; and, as is found to be the case, the thick limb is reversed by turning the insect round so that it presents its other side to the observer. The same conclusion is arrived at by the employment of the method to be now described.

---

* The price of the volume, post-free to England, is, we understand, 10s. (12 fr.)

* Continued from p. 500.

Without sensibly interfering with the movement of the wing, its tip may be made to come in contact with a revolving cylinder, in which the surface is covered with smoked paper. "Although the figures thus produced are for the most part incomplete, we are able, by means of their scattered elements, to reconstruct the figure which has been shown by the optical method." Fig. 2 is one of the results obtained, in which several of the loops are distinctly seen, as is generally the case when, as here, the insect is so held as to rub the cylinder with the hinder edge of the tip of the wing. That a figure of 8 movement of a point, when made to record on a revolving drum, produces a similar curve, is seen from Fig. 3, which is a tracing of a Wheatstone's kaleidophone rod, tuned to the octave, or, in other words, vibrating twice transversely for each longitudinal vibration.

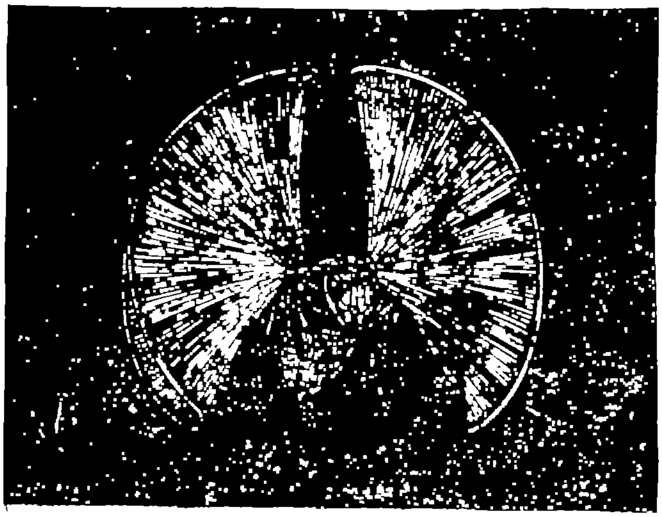

FIG. 1.

Still we are not able to say in which direction the wing is moving in the different branches of the 8 figure; the following simple experiment determines this completely.

FIG. 2.

A slender glass rod is smoked at the tip in the flame of a candle, and held at right angles to the direction in which the wing moves, in the different parts of the wing-tip tract, as in Fig. 4. It is evident that if the wing hits the rod whilst it is descending, it will rub off the smoke film from its upper, and whilst ascending, from its lower surface. Supposing that, in the figure, the head of the insect is directed to the right: when the glass rod enters the loops at b' and a it is found to strike the upper surface; when at b and a', the lower; consequently the arrows indicate the true direction of the wing's motion.

The foregoing facts, when taken in connection with their known anatomical arrangements, place us in a position to discuss the mechanism of the flight of insects. These animals possess muscles, &c., which produce direct downward and upward movements of the wings, and these movements only; therefore the expansion of this vertical line into a figure of 8 must be caused by forces acting external to the thoracic or wing-moving mechanism; in other words, by peculiarities in the structure of the wings themselves. Simple inspection of the wing of a fly shows it to be formed of a rigid, or comparatively rigid, anterior nervure, which supports a thin more yielding membrane behind it. In its descent, the resistance of the air retards the movement of the more yielding posterior portion of the wing sufficiently to cause the lower surface of its

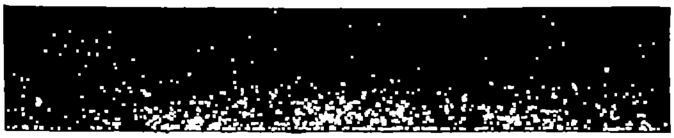

FIG. 3.

otherwise horizontal plane to become directed slightly backwards, and in its ascent the same cause directs it somewhat forward. But an inclined plane striking the air has a tendency to move in the direction of its own inclination; consequently, both in the down and up stroke of the wing, it tends to move forward at the same time. “But this deviation cannot be effected without the nervure being slightly bent. The force which causes the wing to deviate in a forward direction necessarily varies in intensity according to the rapidity with which the organ is depressed. Thus, when the wing towards the end of its descending course moves more slowly, we shall see the nervure, as it is bent with less force, bring the wing backwards in a curvilinear direction. Thus we explain naturally the formation of the descending branch of the 8 passed through by the wing;” and the same theory applies to the ascending branch of the figure.

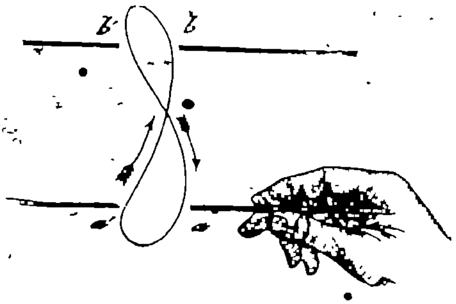

Fig. 4

Acting upon the suggestions of his theory, Prof. Marey has constructed artificial wings, which are planned and move upon the same principle as those of insects. He has not succeeded in making a flying machine, it is true; this, however, is not from any fault in the wings, but because it is impossible to obtain an engine sufficiently light to drive them. He has, however, contrived an apparatus which, when the motor power is supported, is capable of moving horizontally with rapidity, of rising and of falling, just like an insect; and, what is more, when propelled by a simple up and down movement, the tips of the wings describe a figure of 8 of their own accord, as they ought to do upon the theory which led to their construction.

The mechanism of the flight of birds is a problem far more difficult to master than that of insects. The size of the subjects of experiment, and the comparative slowness of the movements of their wings, remove them beyond the reach of the optical and direct graphic method previously employed. Each stroke of the wing has to be recorded through the intervention of a complicated system of tubes and levers, as fragile as they are delicate, and as expensive, as they are liable to be broken. Movements in a single plane are capable of being transferred to paper with comparative ease, but when they are not so limited, and may be in any direction, the necessary complication of the recording machinery becomes immense. The number of little details which have to be continually remembered, and the oft-repeated futile attempts which have to be allowed for, makes Prof. Marey's success in his investigations a matter of more than ordinary surprise. He has mastered the whole subject, having by separate and by combined check methods demonstrated what is the rapidity, direction, and inclination of the wing of the bird in every part of its course. Further than this, he has shown what effects the stroke has on the movements of the body of the bird, and this by a very ingenious new method. The way in which the author invents means for reproducing and originating any quality of movement he may want to develop, must be a source of admiration and almost astonishment to all readers of his work.

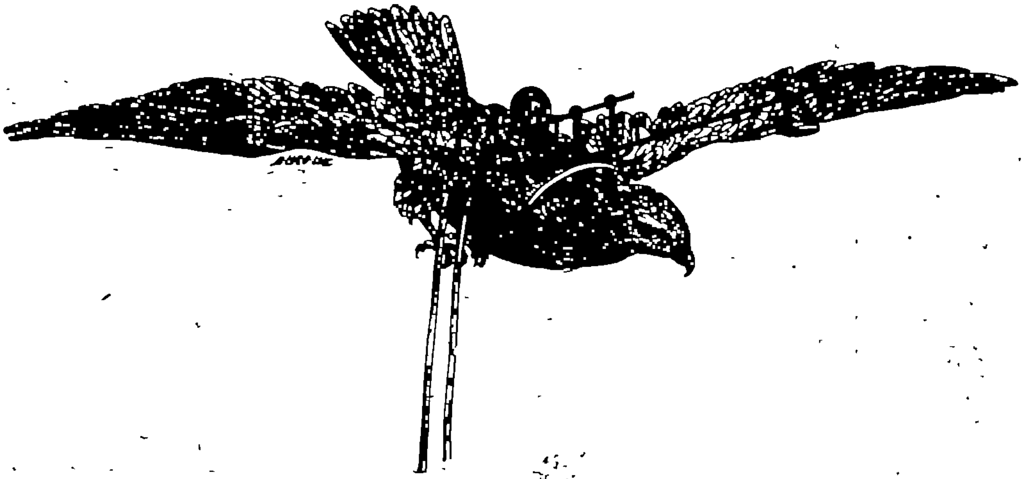

Fig. 5.

Fig. 5 shows a buzzard saddled with the machinery which, by means of the two tubes running downwards from it, transmits the vertical and horizontal movements of its wing to the recording apparatus, which is not represented. In the study of the more intricate points the necessary instruments are so heavy that the whole bird has to be partially supported. This is done by attaching it to the extremity of a long lever which revolves, with scarcely any friction, on a pivot. This is found not seriously to interfere with the normal flight of the bird.

Most of the facts made out by the employment of this apparatus are shown in Fig. 6, which is constructed to illustrate the inclination of the plane of the wing with reference to the axis (Av) of the body of the bird during flight. The direction of the movement of the wing is from H to Av. It shows “that the wing during its ascent assumes an inclined position, which allows it to cut the air so as to meet with the minimum of resistance; while in its descent, on the contrary, the position of its plane is reversed, so that its lower surface turns downwards and slightly backwards." During the descent of the wing the body of the bird is carried forwards as well as upwards. The resistance of the air explains the elliptical form of the figure.

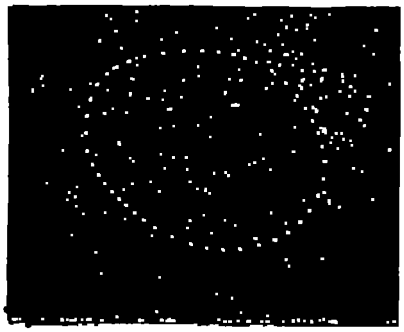

FIG. 6.

We hope that in the short glance which we have taken of some of the most important points discussed in the work before us, we have succeeded in interesting our readers sufficiently in its contents to make them curious to learn more of its subject matter. We cordially recommend it to their attention. To the student of art it gives rules and general principles which will be found invaluable in all attempts to portray the various attitudes of man and his faithful companion, the horse; and these, when understood, will direct attention to the most salient points in the locomotion of other animals.

To the student of physiology it is useful in at least two ways. It shows how invaluable is a knowledge of manipulatory details and the principles of mechanics. Prof. Marey, in the period of his studentship, must have learnt more than the simple routine facts of a medical education. The mechanical Cardan universal joint and Wheatstone's kaleidophone rod are as familiar to him as is the valvular mechanism of the heart; it is his control of method which is one of his most marked characteristics. It shows how elaborate are some of the phenomena which at first sight seem so simple, and how much the science of physiology is within the domain of physics.

The translation, as far as we have had the opportunity of judging, seems a good one, except in one or two cases, where improvement would not be impossible.

OUR BOOK SHELF

The Protoplasmic Theory of Life. By John Drysdale, M.D. (Baillière, Tyndall, and Cox, 1874.)

THE author of this small book is one of the editors of a work on Pathology, by Dr. John Fletcher, of Edinburgh, whose "Rudiments of Physiology" contains much speculative biology of no mean quality. As a disciple he enters into an analysis of the philosophy of his master, discussing its details in connection with the light thrown upon it by modern research, especially the bioplasm theory of Beale. Fletcher argued thus:—The peculiar property, vitality, does not reside in the tissues of the living body indiscriminately, but in one anatomical element alone; because, as the various tissues differ extremely in their physical properties, and these latter are almost exactly the same after as before death, it is hardly to be expected that the living matter can rearrange itself on death, in a short time, into a number of different forms, which shall possess exactly the same physical properties in the vital as in the ordinary state of combination. The concordance of this idea with the theory of Dr. Beale, which divides all tissues into a living forming material (bioplasm), and a dead formed material, the composition of the latter of which alone varies to any extent, must be evident to all; and the working out of its minutiæ occupies several chapters of the work before us. The author also enters fully into the muscle and nerve theory of Dr. Beale in a manner which we do not think will throw much light on either subject. He remarks that the insulating power of the medullary sheath of the nerve-fibre is not demonstrable, therefore "the nerves are not fitted for simple conduction of electric currents; and these have no reason to choose the nerves as their channels, so they spread through the moist tissues almost uniformly." With this opinion we think there are few or no physiologists who will agree, as there is not the least doubt that it is through nerve-fibres that electric stimulation will most readily and most powerfully affect muscular fibres at a distance; otherwise, what is the peculiar value of the "nerve-muscle preparation" of the physiological laboratory? In his remark that Dr. Sanderson is premature in arguing with regard to the Dionæa "that because the contraction of the plant-leaf depends on changes, apparently in the contents of the cells, the muscular contraction of the higher animals is of the same nature," the author is, we think, more fortunate; we have never been able to see that the two phenomena have anything in common. From the consideration of the less speculative protoplasmic theory of the origin of tissues, such points as the nature of life, the connection of force with life and mind, consciousness, and materialism, subjects beyond the pale of precise knowledge, are treated of in a manner which will quite repay perusal by those who are fond of speculating on those precarious topics.

Out of Doors: a Selection of Original Articles on Practical Natural History. By the Rev. J. G. Wood, M.A., F.L.S. (London: Longmans and Co., 1874.)

MR. WOOD is well known as one of the most successful popularisers of natural history. He has himself an extensive and thorough knowledge of his subject, as well as a genuine love of it, and his genial enthusiasm cannot fail to infect the minds of the fortunate boys and girls into whose hands his books may fall. The present volume consists of a number of thoroughly readable papers which have already appeared in various periodicals. They are written in an easy, graceful, chatty style; and, while apparently trying only to amuse his readers, he manages to convey a great deal of valuable information about animals and plants, especially about such as anyone who likes to take the trouble may observe for himself. Some of the papers are concerned with exotic animals, as in that describing "A January Day at Regent's Park," in which are contained many facts concerning the inhabitants of the Zoological Gardens. Most of them are, however, about the "common objects of the country," as is indicated by such titles as "A Sand Quarry in Winter," "Under the Bark," "My Toads," "The Children of the New Forest," "The Repose of Nature," the last concerned with hybernating animals. In "Medusa and her Locks," and "Life on the Ocean Wave" (describing a visit to the Crystal Palace Aquarium), "The Green Crab," &c., we are introduced to the denizens of the ocean. The book is an excellent one to give to a boy or a girl, who, we are sure, would enjoy it, as indeed would many whose boyhood or girlhood is only a sad memory.

LETTERS TO THE EDITOR

[The Editor does not hold himself responsible for opinions expressed by his correspondents. Neither can he undertake to return, or to correspond with the writers of, rejected manuscripts. No notice is taken of anonymous communications.]

Automatism of Animals and Men

I WAS surprised to see by Mr. Wallace's letter of last week that he and I had understood Prof. Huxley's address in senses entirely different. I understood Prof. Huxley to mean that not only the reflex action of animals, but also all the conscious, so-called voluntary actions of men—those, for example, that we perform for the first time and, as we say, with a conscious end in view—are purely automatic; that is, that consciousness, while it accompanies the workings of the animal machine, never stands in a causal relation to any movement whatever; that no movement ever was the result of a state of consciousness, that every movement is the result of physical antecedents which, being present, the movement must of necessity follow, and that in this physical chain there is no break whatever. Years ago I saw no escape from this conclusion, and I have repeatedly made explicit statements of it in the pages of this journal and elsewhere. I was therefore gratified to find Prof. Huxley agreeing with the doctrine; and that the British public should be so little startled by his announcement of an opinion which has seemed absurd to almost everyone to whom I have attempted to expound it, struck me as rather curious. But the explanation is easy, if a man of such fine and cultured intellect as Mr. Wallace could so completely miss the meaning of Prof. Huxley's discourse.

DOUGLAS A. SPALDING

The Edible Frog

YOUR correspondent Mr. Miller (vol. x. p. 483), will find, in Cooke's "British Reptiles," p. 103, accounts of other endeavours to naturalise *Rana esculenta*. About ten years ago I imported a basket full from the Parisian fish-market, where they can easily be obtained, and turned them out into a pond at Woburn Abbey, in Bedfordshire. They thrived and multiplied there; but our summers are seldom hot enough to enable the tadpole to attain his full development before the cold autumnal nights set in. Last week, for example, I forwarded to Prof. Huxley a living tadpole of *R. esculenta*, born in Bedfordshire, who will scarcely complete his evolution before the winter, though his hind legs are fully developed. I have several summers, however, observed a plentiful supply of young *esculenta*, and I believe that in our climate the young will pass the winter as tadpoles, and complete their transformation in the following spring. But this would require more accurate observation before I can affirm it with certainty. During the past summer I imported from Berlin a fresh supply of 200 exceedingly fine specimens, as my French frogs had been reduced in numbers after the frequent visits of a heron. *R. esculenta* is easily imported in the spring, and will travel many days packed in damp moss. These frogs are easily preserved, being more aquatic in their habits than our *R. temporaria*, who roam through the woods and meadows in search of food when the breeding season is over, while the edible frog remains on the banks of his native pond, into which he plunges, describing a graceful curve, at the slightest approach of danger. They have been introduced into Ireland quite lately, from France, by the Earl of Granard, at Castle Forbes; with what success I am unable yet to say. In the spring any number can be easily obtained from the Parisian market, or the aquarium shop of M. Carbonier, 20, Quai du Louvre, Paris; or from the keeper of the reptiles in the Jardin des Plantes, who always has a plentiful supply to feed his snakes.

The laboratories of our lecturers on physiology are supplied from Leipzig, annually, with living *R. esculenta*, and Mr. Miller can easily obtain the address of the dealers who export them.

Oct. 26 ARTHUR RUSSELL

Colour in Flowers not due to Insects

FROM Mr. F. T. Mott's letter, in your last issue (p. 503), I can hardly imagine him to be acquainted with the literature of the subject on which he writes. The difficulties he suggests, though great, are, I think, not unanswerable.

1. Cultivation seldom greatly affects the size or colour of the first cultivated individual. In the cases in which it does so, Mr. Darwin considers the origin of the variation to be due, as suggested by Knight, to change, or excess in food ("Origin of Species," chap. i.) Where the variation is at first slight and slowly intensified, this is the result of artificial selection.

2. When we consider the exhausting character of the reproductive process, we may perhaps think that the abortion of the sexual organs by the multiplication of phyllæ is the result of weakness; but a high state of cultivation, or any excess of food, predisposes to the degradation of organs, the excessive growth of parenchyma, rapid growth, and disease. Organs are also absorbed by heat or by frost. As to the perpetuation of such forms, Mr. Darwin instances ("Origin of Species," chap. viii.) some varieties of the annual stock which produce both double sterile and single fertile seedlings, justly comparable to the fertile and neuter forms of social insects.

3. The "abortive flowers" of such umbellate and capitulate inflorescences as the Guelder Rose, Hydrangea, and Centaurea, where not effected by artificial selection, act as a lure to the central fertile florets, as shown by Dr. Ogle (*Popular Science Review*, April 1870), originated according to the law of balance of growth.

4. The beauty of fruits "serves merely as a guide to birds and beasts, in order that the fruit may be devoured and the manured seeds disseminated" ("Origin of Species," chap. vi.)

5. "We meet very commonly with gaily-coloured chemical products, essentially connected with the normal processes of development, and originating from venomous infection by insects, or from decomposition. These colours appear to be merely an accidental quality of the chemical products . . . natural selection is without any influence as to colours, unless animals are attracted or repelled by them" (Hermann Muller: NATURE, vol. ix., p. 460). Mimicry has been recorded in fungi (NATURE, vol. vii. p. 55). Mr. Mott's letter indicates the fallacious opinions that mere beauty or variety are objects in nature, and that the Darwinian hypothesis deals with the origin of variations.

G. S. BOULGER

Harrow Road, W., Oct. 26

ABLER pens than mine will probably reply to Mr. Mott's letter in NATURE, vol. x. p. 503; but if not, may I be permitted to point out that the facts therein adduced, as not harmonising with the theory that colour in flowers has been assumed for the purpose of attracting insects, are capable of explanation.

1. *Cultivated flowers.*—The greater size and brilliancy of colour attained by these is not due to cultivation alone, but to selection practised by the cultivator. He chooses his seeds from the plants that bear the largest and best coloured flowers, and thus, directly and intentionally, performs the very work that in a state of nature is carried out, indirectly and unconsciously, by the insect fertiliser.

2. *Double flowers* are only accidental, and not permanent, in a state of nature. The cultivator has succeeded in producing and preserving them by giving a preference to, and propagating from, those plants which bear flowers with a tendency to become double. Here also intentional selection by the gardener has taken the place of natural selection by the insect.

3. The *abortive flowers* of the Guelder Rose and Hydrangea, as they grow naturally, are confined to the outer part of the corymbs, and serve the same purpose as the ray of Compositæ (which in some species consists of neuter florets) and the highly coloured floral bracts of some plants, viz., to attract insects to the fertile flowers they surround. The garden forms of Viburnum and Hydrangea, the corymbs of which are composed entirely or nearly so of sterile flowers, are, like double flowers, the result of intentional selection by the cultivator.

4. The brilliant colours of many succulent fruits have resulted from their superior attractiveness, not indeed to insects for the purpose of fertilisation, but to birds and other fruit-eating animals for the purpose of dissemination, as has been well described by Prof. Hildebrand. The occurrence of brilliant colours in the vegetable kingdom, independently of the agency of insects, as on fruits, galls, fungi, and lichens, is no more irreconcileable with the theory that the colour of *flowers* has been brought about by that agency, than is the occurrence of bright colours on insects themselves and other members of the animal kingdom, or the vivid colour of many mineral substances.

Newton-le-Willows, Oct. 26 THOMAS COMBER

Migration of Birds

I HAVE waited for some time to see if anyone would ask Prof. Newton or Mr. Tegetmeier, on what evidence the latter gentleman has been led to "declare that knowledge of landmarks obtained by sight, and sight only, is the sense which directs these birds," viz., carrier-pigeons. (See NATURE, vol. x. p. 416.) As no one has asked this question, I am obliged to do so myself; but at the same time I should like to say that it is only because the subject is one of great importance that I think we should not here be satisfied with an authoritative statement of opinion, without some indication of the kind and degree of evidence on which such opinion is based. Moreover, it seems to me particularly desirable, that if a man of Mr. Tegetmeier's immense experience in this matter has any conclusive reasons for his decision, the public should have the benefit of their recital; so that the vexed question as to the "homing" of pigeons may once for all be settled.

The importance of settling this question I deem almost impossible to overrate; for, with all deference to Prof. Newton, I do not see why "sight alone cannot be regarded as of much aid to birds which at one stretch transport themselves across the breadth of Europe," if it is once satisfactorily proved that "sight, and sight alone, is the sense which directs" carrier-pigeons, say, from Paris to London. For it must be remembered that carrier-pigeons are descended from a non-migratory species of bird, and may therefore well be supposed not to have the faculty of remembering landmarks so fully developed as is the case in migratory species, where this faculty has doubtless been deeply impressed by means of natural selection. Further, we must not forget that in the case of all migratory birds, the younger generations fly in company with the older ones; so that the former must make several journeys before it devolves upon them to lead the way.

When the instinct question was last discussed in NATURE, I published a summary of the evidence which had been adduced by the correspondence. As at that time I thought with Prof. Newton that the supposition of sight being the faculty to which the return of carriers is due was a very improbable one, I argued that to account for the facts of migration by a similar supposition would be unwarranted. But when so great an authority has found cause to alter his opinion regarding the supposition on which my previous argument was founded, I think the fact bids fair, not only to destroy that argument, but, as just shown, to reverse it. Now I call attention to this in order to show how much depends upon a final determination of the instinct question so far as carrier-pigeons are concerned. In no other case of "homing" (and migration is nothing more) are we able to subject the birds to experiment; so that if this has been done in the case of pigeons with unequivocally positive results, we are at any rate in possession of a valid analogy from which to establish a probability as to the nature of the migratory instinct in general. And the value of this probability would be more definite if Mr. Tegetmeier would tell us what he thinks, or knows, to be the utmost limit of a pigeon's memory for landmarks.

GEORGE J. ROMANES

The Aboriginal "Murri" Race of Australia

(*Communicated by Sir J. Lubbock, F.R.S.*)

HAVING lately had an opportunity of reading your work on "The Origin of Civilisation," it has occurred to me that some information which has come to my knowledge during missionary tours among the aborigines known as the race of Murri, and during a journey afterwards undertaken at the instance of the Government of this Colony to the Namoi and Barwun Rivers, may be acceptable to you. Through Prof. Max-Muller my journal and my grammar of "Kamilaroi, Dippil, and Turrubul" were transmitted to the Anthropological Society; and I suppose all I have written is accessible for the purposes of philosophical investigation among the records of that society. I now confine my statements to points touched upon in those parts of "The Origin of Civilisation" which treat of the Australian aborigines.

Page 11. In the north-western part of this colony, about the tributaries of the Darling, a man will not look at his mother-in-law. If they meet accidentally they turn back to back, and take no further notice one of another.

P. 34. My experience differs entirely from that of Mr. Oldfield. Having shown many drawings and paintings of animals and men—including their own likenesses—to the aborigines, I always found them quick at perceiving the design. They themselves trace on the trees, with their tomahawks, fair representations of snakes and other animals.

P. 199. It is true no man may marry a woman of the same names as his sisters. But it is by no means true, as Dr. Lang stated, on imperfect information, that no one can marry a woman "of the same clan," taking the word "clan" in the common sense of the term as equivalent to "gens." The rule that restricts marriage is founded on an exact law of pedigree and class names. It is as follows among the aborigines of the Namoi; and other tribes have rules similar in the main, though the names differ widely.

The men are all divided into four classes—Murri, Kumbo, Ippai, and Kubbi. The Murri (whose name differs from that designating the race, "Murri," only in the quantity of the last syllable) are regarded as the most important; the Kubbi are the lowest in esteem. The sisters of these four are respectively Mātā (or Matha), Būtha, Ippātā, and Kubbotha (the vowels are pronounced as in French). So that in one family every son bears the name Murri, every daughter the name Mata; in another family every son is Kumbo, every daughter Butha. There is also another classification marked by "totems," in which a second name is given to everyone according to birth. Thus there are the *bundar* (kangaroo), *mūtti* (opossum), *dūlī* (iguana), *nūrai* (black snake), *dīnoūn* (emu), and others. On these classifications are based laws of marriage and descent. A Murri may marry Butha of the same totem, and of any other totem he may take a Mata, though she bears the name of his own sisters, who are all Mata. So Ippai dīnoūn may marry Ippata nurai, but not Ippata dīnoūn. But Ippai dīnoūn may marry Kubbotha dīnoūn.

Children always bear the second name (or totem) of their mother; and the first name of the child depends on the mother's. Thus the sons and daughters of Mata are always Kubbi and Kubbotha; those of Butha are Ippai and Ippatha; those of Ippatha are Kumbo and Butha; those of Kubbotha are Murri and Mata. As Ippai generally marries Butha, Ippai's son is generally Murri, but not always. When Ippai's wife is other than Kubbotha, his son is other than Murri. At first it seemed to me that the father's name determined that of the son; but afterwards I found that it is by the mother's name that those of the children are fixed. It is remarkable that while the second name of a child is the same as the mother's, the first, though dependent on the mother's, is always different. Mata's daughter cannot be a Mata, but is always Kubbotha. The Rev. Lorimer Fison, who had been in communication with Prof. Goldwin Smith and others on the "Tamil" system, and had found that system in Fiji, on seeing the rules of marriage and descent which I had noted down as prevailing among the Kamilaroi of Australia, said the principles of the "Tamil" were observed here also.

They have no words meaning simply brother and sister, but use terms signifying elder brother and younger brother. Thus "daiadī" is elder brother, "gullami" younger brother; and in a family of six brothers the eldest has no daiadī, but five gullami; the youngest has no gullami, but five daiadī; the third has two daiadī and three gullami. "Boādi" is elder sister, "burandi" younger sister. "Gunī" (γυνή) is the child's word for "mother dear."

P. 205. The Kamilaroi and Wiradhuri tribes, who formerly occupied a large territory on the Darling and its tributaries, have a traditional faith in "Baiame" or "Baiamai," literally "the Maker," from *baia*, to make or build. They say that Baiame made everything. Some say that he once lived as a man upon earth; and near the Narran River is a hole in a rock, somewhat in the shape of a man, where they say Baiame used to rest. He makes the grass to grow, and provides all creatures with food. Baiame gave them a sacred wand, which they exhibited at their "bora," the initiatory rite of admission to manhood, and the sight of this wand is essential to make a man. Baiame once showed the black fellows how to get rid of "Mullion," a demon in the form of an eagle, who lived in a tree and devoured many people. Baiame is also the Supreme Judge who awards to men their future lot. When people die, the good ascend to Baiame, and he appoints them a place on the great *warrambool* (watercourse, with groves, fruits, and animals, for the enjoyment of the blessed), in the sky—the Milky Way; the bad perish at death.

The Rev. James Gunther, of Mudgee, who was many years engaged in the instruction of the Wiradhuri tribes, has recorded the fact that these people ascribe to Baiame "three of the attributes of the God of the Bible"—supreme power, immortality, and goodness. There are among them men who make light of these traditions; but even when first spoken with by Christian instructors, some were evidently devout in their thoughts of Baiame and their hopes of a future life; and as to a future state, they generally have a lively expectation. A squatter, M. De Becker, who lived many years at a remote station, where the blacks were in frequent communication with him, told me he had seen many of them die with a cheerful anticipation of being soon in a "better country." WILLIAM RIDLEY

Paddington, Sydney, Australia, July 11

Reported Discovery of Gold in Samoa

FROM a note in NATURE (vol. ix. p. 273) I am surprised to learn that Mr. Williams, H.M.'s Consul in these islands, has stated, in an official despatch to the Foreign Secretary, that gold in quartz has been found on Upolu, in a valley about three miles from the Port of Apia. The samples assayed are said to have yielded at the rate of 3,000 ozs. to the ton.

No geologist who knows Samoa will believe that gold in paying quantities has been found in this island. Still, I think it right to give the following explanation of what gave rise to the above report.

A few months ago gold was said to have been found, as reported by Mr. Williams. Most people here, however, disbelieved it, thinking the report had been raised by unprincipled men for the purpose of attracting settlers and promoting the sale of land. Some believed the pretended specimens of Samoan gold had not been found in Samoa, and felt quite certain they had not been procured in the particular valley specified.

The facts of the case have been lately disclosed, since Mr. Williams left the islands in ill health; he was therefore in ignorance of them when he wrote his despatch from Sydney in October 1873.

The specimens of gold assayed were brought from the Thames gold diggings in New Zealand, and two or three foreign settlers here, who own land in the valley where the gold is said to have been found, raised the report in order to sell their land at a high price. They appear to have imposed upon the credulity of the Consul, who took the specimens to Sydney and had them assayed there. S. J. WHITMEE

Upolu, Samoa, June 2

Photographic Irradiation

I SHALL be obliged if you will allow me space to state more specifically why I am not able to concur in the irradiation theory of Mr. Aitken (vol. x. p. 439). I understand from his last letter that he fully agrees with Lord Lindsay and myself as to the cause of the outer irradiation, and our only difference of opinion now lies in the amount of the inner irradiation that can be traced as due to what he has termed *molecular reflection* within the thickness of the collodion film. Mr. Aitken and Capt. Abney both appear to consider this as the chief cause of the inner irradiation fringe, while I am disposed to rank the irradiation arising from the optical imperfections of the instrument with which the photograph is taken; together with any irradiation that may arise in the wet plate processes from circulation in the film of fluid covering the plate—before—or as very much greater in amount than the irradiation due to dispersion within the collodion film.

We should expect that light dispersed within the thickness of the collodion film would produce its photographic effect in all directions round the illuminated point—and that the area of action would not be affected, or certainly would not be decreased, by covering the front surface of the portions of the collodion film adjacent to the directly illuminated area with an opaque object. Indeed, if the opaque object were a good reflector, such as a bright piece of platinum foil, we might expect slightly to increase the area of photographic action due to dispersion within the film; for the light dispersed towards the front surface of the film would be in great measure reflected back into the thickness of the collodion. But, as I have shown in former letters, placing a piece of platinum foil in immediate contact with the collodion film causes the photographic image of a bright image to be sharply cut off, and no perceptible irradiation can be traced under the edge of the foil.

Again, we should expect the action of dispersed light to extend further within a thick film of collodion than within a thin film; for there would be a greater thickness of illuminated collodion, and the angle through which light could be radiated directly upon the adjacent area without suffering reflection at either surface would be increased, but I have not been able to detect any perceptible difference in the amount of irradiation of similarly exposed plates coated with four thicknesses of collodion and in those coated with but one film.

I have felt myself therefore driven to look for the cause of irradiation either in some circulation taking place within the film of liquid covering the collodion at the time of exposure, which film would be interrupted and its tension greatly altered by the contact of a solid body; or else to seek its explanation in the optical imperfections of the photographic instrument. Possibly, in the wet-plate processes, circulation within the fluid film may produce a very sensible effect. Indeed, there are phenomena which make this more than probable. When a wet-plate picture of a strong light projected upon a dark background is taken with a decided over-exposure of say ten minutes or a quarter of an hour, the inner irradiation fringe is seen to be most opaque on its outer edge; and the phenomenon is so marked that it cannot be held to be an effect of contrast. This, of course, should not be the case if the irradiation edge were due merely to the optical imperfections of the instrument. Again, in the small negatives of the eclipse of December 1871, taken at Dodabetta and Baikul, there is a decided structure in the irradiation under the prominences: under the brightest of them it can be distinctly seen that the opacity of the irradiation fringe is greatest along lines radiating from the prominences—while along the outside, that is, furthest from the prominences, there is an arc of slightly greater intensity. The same structure is traceable in all the negatives, but it is most marked in the Baikul series, and especially in those negatives in which the prominences are most exposed, viz., on the east and west limbs, at the beginning and at the end of totality. This, of course, cannot be accounted for merely by the optical imperfection theory. Again, the little brushes mentioned in a former letter as extending under the edge of the platinum foil, cannot be accounted for without supposing that there is circulation within the liquid film. I hope on my return to England to carry out some further experiments for determining the amount of the inner irradiation which in the wet-plate processes may be due to such circulation. A. COWPER RANYARD

Florence

Curious Rainbow

THE unusual phenomena described by Mr. Swettenham as having been observed by him in a rainbow in the Kyles of Bute (NATURE, vol. x. p. 398), are due, I think, to interference. If I remember rightly, he will find an explanation of the matter in "Deschanel's Natural Philosophy," by Prof. Everett.

Clifton, Bristol, Oct. 19 G. J. THOMSON

Aurora

A BRIGHT display of aurora was seen here on Friday, Oct. 16, between eight and eleven o'clock. At ten o'clock, when I first saw it, the arch of the aurora stretched from Pollux to Arcturus, then both near the horizon, the apex of the arch being under Ursa Major. Deep fringes of light hung from the inner side of the arch and moved with a curtain-like motion to the north. The light was white. On Saturday night numerous streamers were seen darting upwards from the horizon; and many falling stars, two of them leaving trains of light for about a second.

Sneezing in Animals

I HAVE a rough-coated terrier dog which will sneeze when told to do so. I taught him this trick by repeatedly imitating sneezing in his presence.

When about to perform, he shakes his head obliquely once or twice, just as many people do, and then ends with a good sharp sneeze. J. F. M. H. S.

THE RECENT ERUPTION OF ETNA

PROF. ORAZIO SILVESTRI has published* his observations on the eruption of Etna which occurred on the 29th of August, and reminds us that two months previously he predicted not only the formation of the fissure on the Mongibello side, but likewise the eruption by which it was accompanied.

After an uninterrupted period of eruptive phenomena by which the central crater was considerably modified, at

---

* "Notizie sulla eruzione dell' Etna del 29 Agosto 1874." Catania, 1874.

4 A.M. August 29, subterranean rumblings were followed by two shocks, when a formidable column of black smoke and flaming materials rushed up into the air, and, carried by the wind, fell at great distances, in the form of small scoriæ and sand. Numerous other columns succeeded, with roaring, rumbling noises, lasting for seven hours with great intensity, dying away towards night. The noises ceased on the 30th of August, and vapour and smoke alone rose from the crater and along the line of disturbance.

When the volcanic tremors were most intense, at 4 A.M. 29th August, a fissure appeared on the north side of the great central crater, extending for five kilometers, with an axis running E. by 8° N. The centre of the impellant force was at an elevation of 2,450 metres, between two mountains of lava known as *Fratella Pii* and *Monte Grigio*, where the rent widened to its maximum width of fifty to sixty metres, whence it narrows very steadily towards the base, terminating after a course of three kilometres. And at this altitude, where the greatest thrust was manifested, may be noticed the formation of a new mountain, or crater, with an elliptical contour, coinciding with the fissure in the direction of the axis. It has a diameter of about 100 metres, and covers a superficial area of about 117,734 square metres. This crater, now appearing as a new mountain, is formed of doleritic lava and a pre-historic grey Labradorite, torn from the surface by the black lava of this eruption, in which they are enveloped. There are thus mingled two lavas of the most distant epochs in the history of Etna, the older forming the framework of the mountain. The crater shows internally the usual funnel shape; and near its base, over a width of fifty to sixty metres, there are ten eruptive mouths, open wide, which succeed each other like button-holes;—those nearest the crater are abysses twenty-five to thirty metres in diameter along the line of the fissure. There are also two other groups of small cones, in which the diameter of the mouths is not more than from one to three metres—eight in the second group, and four in the third; so that within a distance of half a kilometre from the crater there are twenty-two minor cones in linear extension. The crack is now continued down a declivity formed by the lava current of 1614, which slopes to the north at an angle of 13° or 14°. Although the rent traverses this lava, there are no more small cones for a distance of 600 metres, when a fourth group of five mouths, each two to three metres wide, is found at an altitude of 2,170 metres; these latter have poured out a torrent of lava descending in a stream 150 metres long, 60 metres wide, and two metres thick. A little lower, at a height of 2,150 metres, is a fifth group of three mouths, more active than the others, but situated like the last group on the great lava stream of 1614. The torrent of lava hurled from these mouths is 400 metres long, 80 wide, and two metres thick, and forms two short bifurcations. Finally, near the end of the crack, at an altitude of 2,030 metres, a sixth and last group of five mouths is formed, which have ejected large quantities of cinder and scoriæ. They are situated about twelve kilometres from the old crater of Mojo, towards which this great crack runs down the side of Etna from its central crater. Besides this principal rent there are an infinite number of smaller clefts, breaking up the soil and radiating from the centres, of great dynamic activity. In a few hours the new mountain and its system of about thirty-five subordinate cones were thrown up, and thus there was brought to the surface a total quantity of about 1,351,000 cubic metres of volcanic materials.

The mingling of the old and new lavas will form the subject of a subsequent memoir. The recent lava, like all modern lavas, is augitic, black, magnetic, and has a metallic lustre. Its specific gravity is 2·3636 at a temperature of 25° Cent. The superficial temperature of the lava was 70°, while at a depth of half a metre it was 90°, and a still higher temperature was recorded where fumeroles were active.

From the remarkably short duration of the eruption, Prof. Silvestri anticipates a more powerful outburst to come, which will be manifested along the rent in making which the present internal explosion has spent its force.

Concurrently with this disturbance the whole of volcanic Italy has been affected. The island of Volcano, after a century of quiescence, discharged cinders and flaming materials from its vast crater for nine months previous to the eruptive phenomena of Etna in the autumn of 1873. The eruption of Volcano continued decreasing in intensity through July 1874, and traces of it are still continually seen. Stromboli last June made a rare eruption, sending out small stones with great energy in place of its characteristic feeble incessant explosions.

Vesuvius has not been unsympathetic, and discharged an unusual volume of dense vapour at the end of August contemporaneously with the eruption of Etna.

THE SECOND AUSTRO-HUNGARIAN EXPEDITION TO THE NORTH POLE, UNDER WEYPRECHT AND PAYER, 1872—74.

ON the return of the Austrian North Polar Expedition we gave in NATURE, vol. x. p. 439, an outline of the discoveries made. From the original memoirs on the achievements of the voyage, by Dr. A. Petermann, Dr. Joseph Chavanne, and Dr. v. Littrow, which have been kindly forwarded to us by the first-named, along with the map, we are able to give still further details.

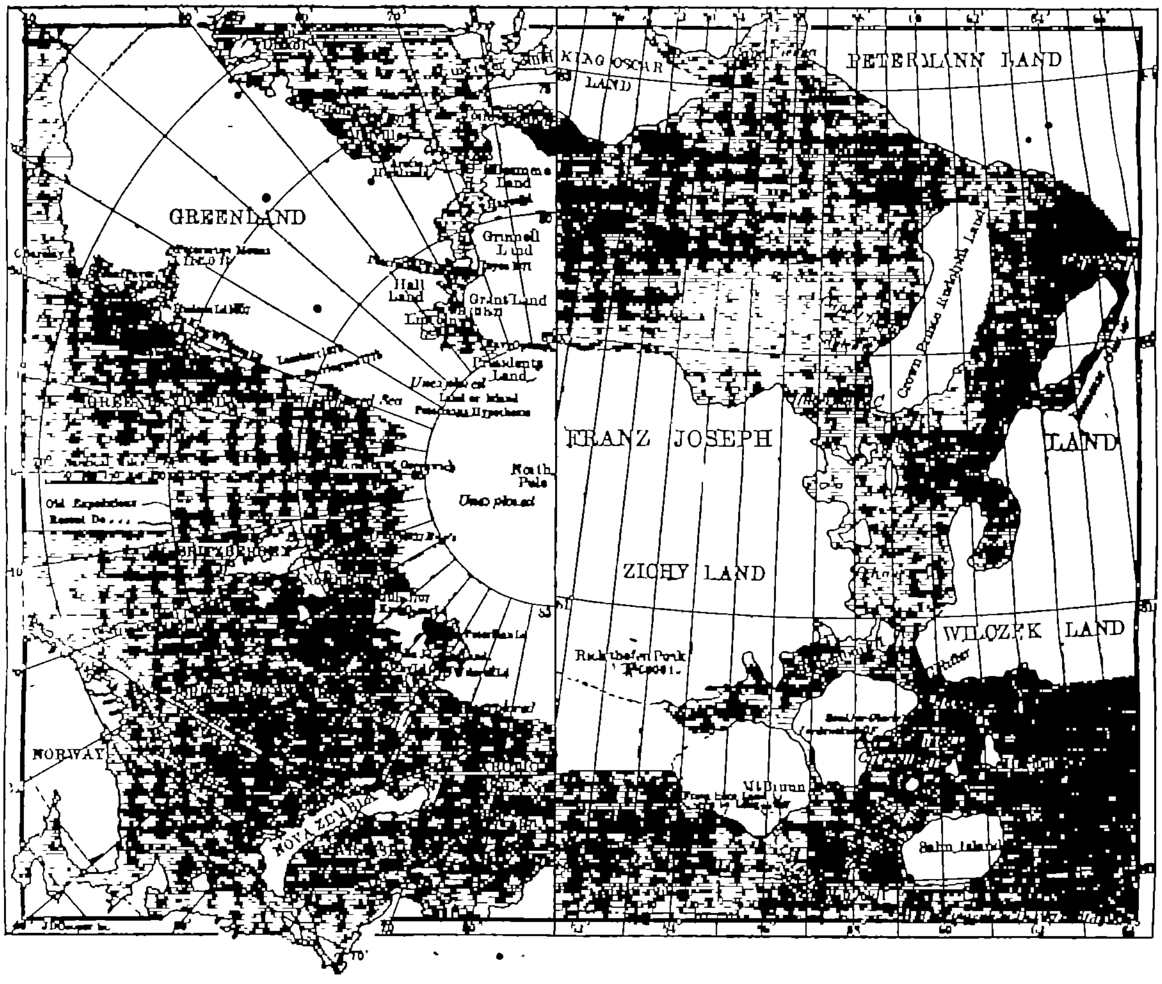
No general with his victorious army returning from battle could have been welcomed with greater enthusiasm and cordiality than this little band of twenty-two men. For though they only come home from a North Polar expedition, people instinctively feel that the accomplishment of the *Tegetthof's* voyage is a heroic deed. To gain a battle, hetacombs of precious human lives must be sacrificed; here all came safely back. A battle does not demand greater endurance and courage, for the battle of the *Tegetthof* lasted two years. We think of the times of Columbus and Vasco da Gama, of their discoveries and return to Palos and Lisbon. It is true the Austrian expedition did not find an America or an India; but Columbus, and other great discoverers, did not really discover more than Weyprecht and Payer. Before Columbus traversed it, men believed that the western ocean was not navigable, and similar ideas prevailed with more reason concerning the sea just explored. One of the first describers of polar regions, Scoresby, had, in the year 1820, in his famous work, drawn a line over the whole sea from Bear Island, in 74½° N. lat., to Novaya Zemlya, and said, with confidence, "Here is the icy barrier where navigation must end;" and the unknown regions beyond this line were regarded by mariners with pious dread. The Austrian expedition has torn away the veil up to 83° N. lat., and has narrowed the undiscovered parts of the earth by a space of 8° to the north.

They had to stay at Novaya Zemlya for four weeks, and work their way out of thick ice for at least 240 geographical miles before reaching Cape Nassau, which was the starting-point of the expedition. They then encountered the most terrific dangers which can befall a polar expedition, for they were hemmed in by an ice floe, and shut up for fourteen months in pack ice, and driven about in the Siberian icy ocean. Eventually a tolerably safe place in the open ice was found for the second wintering, when the crew heroically divided themselves, the better to explore the land they had discovered.

The comrades of the *Tegetthof* have shown themselves worthy to take rank with their prototypes, Ross, Parry, M'Clintock, Kane, Hayes, and Hall, for they have made a breach in a place where no one since Barents, during all the 300 years of arctic discovery, had attempted an attack. The explorations are here shown on a map constructed from the original preliminary sketch by Payer, with the geographical constants drawn by Dr. Petermann.'

The nature of the North Pole is not so fully known but that the learned world is still fighting as to whether it is land or water, or an everlasting ice-cap, stretching like our home glaciers, or obeying other laws, or dissolving and opening under the influence of the warm sun, air, or water, like our own seas. And since any expedition can only discover a proportionally small part of the great unknown arctic world, there will always be some people ready with ape-like wisdom to 'pronounce against any endeavour to unfold the laws of nature within the inner polar regions. Dr. Petermann has for ten years urged that Germany should send out a polar expedition far into the great European polar sea, and is particularly anxious to get the whole breadth of the European North Sea explored from East Greenland to Novaya Zemlya, north of Bear Island.

The results of this expedition have marked an epoch in various ways. First by the drift for fourteen months in the ice-floe. Such driftings have occurred before on a larger scale, as in the case of De Haven, M'Clintock, the *Hansa* people, and the *Polaris* people; but all these expeditions drifted south--the *Polaris* crew from 80° N. lat. to 53°. But entirely new and full of significance for physical geography, is the circumstance that the path of the Austrian expedition was uninterruptedly towards the north.



The map on the left shows the state of polar exploration up to the end of September 1874; that on the right is the newly-discovered land.

The following instances also show that the icy sea is navigable. Hall's expedition north from Smith's Sound proved that from Tessiusak in 73° 20' N. lat., through the ill-famed Melville Bay, Smith's Sound, Kennedy Channel, Robeson Channel, to 82° 11', was reached with ease in eleven days, the distance being more than 700 miles; and the best officers of this expedition declare their united conviction that they could easily have reached further north. The Karis Sea, formerly called the Ice-cellar of the North Pole, has proved to be completely navigable. Admiral Sir E. Parry, after Sir James Clark Ross perhaps the most experienced of all polar travellers, going north from Spitzbergen, came to the conclusion that a ship might sail to 82° N. lat. without encountering a piece of ice. Admiral Beechey, one of the most excellent and perhaps the most scientific sea captain who has ever lived, said in 1831 that he considered the navigation of the coast of the arctic region as practicable.

Dr. Petermann then asks: Is the experience of the Austrian expedition a measure of the resistance offered by the ice in the icy sea just explored? Are all the results which are opposed to it, from the former expedition of Weyprecht and Payer, not worthless? Is it worth nothing that numerous Norwegian fishermen in sailing boats have been able to sail round Novaya Zemlya since 1869 and penetrate far into the Siberian ice sea, always finding it navigable and quite free from ice? Is it not worth remembering that at the time Payer and Weyprecht found the unwonted accumulation of ice by Novaya Zemlya, the western half of the great sea, *quite against the rule*, was free from ice, so that the Norwegian fishermen were able for the first time to reach the mystic Gillisland, which is King Charles Land? Under certain unfavourable conditions of wintering, the north side of Novaya Zemlya is, without doubt, as difficult and impossible for navigation as the north side of Spitzbergen, or Cape Horn, or the Cape of Good Hope, or the English Channel, or the mouth of the Weser.

The *Tegetthof* is a small steamer of 220 tons, and though her supply of coal was necessarily small, it proved ample, for steam could only be got up three times in the first three weeks of the voyage. And thus, as in all recent voyages, rowing boats proved themselves better fitted than steam launches for exploring work. In the summer of 1872, the journey from Cape Nassau could not be made in a straight course, but Count Wilozek's journey in the sailing vessel *Isbjörn* demonstrated that it was practicable by following a tortuous course.

The best and first account of the results of the Austrian expedition, in relation to their bearing on the present state of knowledge of arctic geography, and of the current setting into the icy sea from the south, is given by Dr. Joseph Chavanne, and is as follows:—

"The rising polar sun of 1874 lighted up and discovered a new land, now named Franz Joseph Land, and the expedition set off to explore it in sledges. They found the country to be a narrow, far-extending foreland, divided from Greenland by a wide arm of the sea now named Austria Sound. It is mountainous, approaching to a plateau, with steep conical mountains 5,000 feet high, covered with enormous glaciers. This newly discovered land stretches for more than 15° of longitude, and bounds the horizon with mountains as far as the eye can carry to the north and west. In 83° N. lat. they sighted Cape Vienna, the most northern point visible, and Cape Pesth, one degree further south, and finding the great glaciers impassable in this latitude, they returned to their icebound ship. Imperative necessity compelled them to abandon their vessel upon its icy platform, and they set out to return to Europe with four sledges. They travelled on for sixty-nine days, and then fell in with the Russian schooner *Nikolai*, who landed them at Vardoe, in the north of Norway. Austria Sound, and other fjords, were filled with icebergs. They met with no trace of human inhabitants, and remark that animal and plant life is scarce and small in the south."

Twenty-two years ago Dr. Petermann indicated on a map of the arctic regions the polar extension of the Gulf Stream. Though generally regarded at the time merely as the hypothesis of a German philosopher, the unwilling drifting of the *Tegetthof* in the ice has proved that the principal northern branch of the Gulf Stream washes the west and northern coast of Novaya Zemlya. Between the west coast of Novaya Zemlya and the east coast of Spitzbergen, enormous masses of ice press westward with the polar current flowing from New Siberia Island and the Siberian rivers, and penetrate wedge-like into the Gulf Stream. The temperature of Franz Joseph Land in the winter of 1872-73 was 40° Réaumur.

The remarkable correspondence between the coasts on the two sides of Greenland supports the conjecture that the polar land, if not subdivided into a number of islands by ramifying arms of the sea, is at least deeply indented by fjords, as is demonstrated by Hall's discovery of Petermann's Fjord on the west coast of Greenland and Franz Joseph's Fjord on the east.

PHYSICS AT THE UNIVERSITY OF LONDON*

II.

TURNING then first of all to the Regulations for Matriculation in the University of London, we find that the knowledge of Physics that is required is specified under four heads: namely, *Mechanics; Hydrostatics, Hydraulics*, and *Pneumatics; Optics;* and *Heat*, which last, until quite recently, was included in the examination in Chemistry; and the whole is accompanied by a general qualifying note to the effect that "the questions in Natural Philosophy will be of a strictly elementary character." The particulars, which are given under each of the above general heads, read as if they might have been copied, as they stand, from the table of contents of an elementary treatise on Natural Philosophy published about a hundred years ago. I have examined them often and carefully, and have never found a tittle of internal evidence to show that they were drawn up within the present century; and yet we know that they are the work of a University, not yet forty years old, which owes its very existence to the demand for educational progress, and began its career—without indeed the wealth or the prestige of its older compeers—but also without the trammels of tradition and ecclesiasticism, which render it so difficult for them to advance with the times. It is not a sufficient defence of the antiquated character of these Regulations to say that the very nature of the examination to which they refer would make the introduction of new discoveries entirely out of place, and that, in point of fact, the fundamental doctrines relating to the subjects in question were as fully established a hundred years ago as they are now. This is so nearly true (except in the case of *Heat*), that it would not be worth while to dispute it; but my objection is not to the want of novelty in the subjects enumerated, but to the want of perception, which the manner of the enumeration indicates, of the possibility of progress or improvement in the ways of teaching long-known truths. Instead of giving prominence to general principles in such a way as to suggest to teachers the use of easy and comprehensive methods, these Regulations cut up the subjects to which they relate into a number of detached propositions, of greater or less generality, which teachers and students, who accept these Regulations as their guide, generally treat as independent units of knowledge each of which is to be put into a separate hole of the memory. It would be wearisome, but not difficult, to illustrate my meaning by particular examples; the substance of it is that this examination does not encourage good teaching of the elementary parts of Physics, but induces candidates to trust to memory almost to the total exclusion of any attempt at thinking. My opinions on this subject have not been formed *à priori*, but have been forced upon me by reading examination papers, and by trying to teach in what I believed to be the best way. It is in general nearly hopeless to try to get students, who have the fear of the London Matriculation Examination before their eyes, to make any serious attempt to understand the principles of Mechanics; but they often show a lamentable willingness to learn statements of them by heart, and when they go up for examination they know a great deal and understand next to nothing. They know that in a lever of the first kind, whose weight is neglected, the power is to the weight as the weight's arm to the power's arm; that when a heavy body falls from rest, the spaces described in successive seconds are as the natural series of odd numbers; and they are ready at the shortest notice to write down the formula for calculating the specific gravity of a solid body heavier than water; but it is only in the rarest possible cases that they can be got to reproduce the reasoning by which these results are connected with general physical principles. The industry displayed in acquiring separate fragments of information about Physics is often extremely creditable; but it is impossible not to regret that the same method should be employed in learning what is called Science, as in learning the dates of accession of the Kings of England.

---

* Introductory Lecture delivered at the opening of the Session of the Faculties of Arts and Laws and of Science, in University College, London, on Monday, Oct. 5, 1874, by G. Carey Foster, F.R.S., Professor of Physics. Continued from p. 508.

A still more curious instance of the antiquarian tendencies of the University of London is afforded by the Regulations for the Degrees in Science, which were instituted as recently as 1860. It might have been supposed that when the Senate had once determined to make so great an innovation in the traditional usages of English Universities as to grant Degrees in Science, they would have been impelled by the spirit of their own act to frame such regulations for the examinations as should be in full agreement with the present state of science. I recognise as fully as anyone the impropriety of introducing anything that can fairly be called a new discovery into examinations such as those for the London degree of Bachelor of Science, but between such a course and that adopted by the University there is a very broad *via media*. In order to obtain the degree of Bachelor of Science, a candidate requires, after Matriculation, to pass two further examinations, called respectively the First and Second B.Sc. Examination. At the former, a paper is set in what is called "Mechanical Philosophy," and another in "Natural Philosophy," the Mechanical Philosophy being a repetition of the subjects called Natural Philosophy at Matriculation, with a few additions, chiefly under the head of Optics, while the Natural Philosophy includes *Heat*, *Electricity*, and *Magnetism*. At the Second B.Sc. Examination there are two papers in "Mechanical and Natural Philosophy," which are explained by the Regulations to mean nearly the same parts of Statics, Dynamics, Hydrostatics, Pneumatics, and Geometrical Optics as those prescribed for the First B.Sc. Examination, but treated a little more fully, and with the addition of a very little Acoustics, a little Physical Optics, and a smattering of Astronomy. The details given in the Regulations under each of these general heads are open to the same general criticisms as those which I have already ventured to make upon the mode in which the requirements in Natural Philosophy are stated in the Regulations for Matriculation; in fact, those parts of the subject which are common to the three examinations are specified in very nearly the same words in each case, the difference being that a slightly more mathematical treatment of them is expected at the higher examinations. In each case there is the same failure to suggest general and comprehensive points of view, and the same enumeration of particular examples, as though they were of equal importance with the general principles which they illustrate. It is just as if, in an examination in Latin or Greek, instead of its being stated that candidates would be required to answer questions in grammar, lists of particular nouns and verbs were given with the announcement that candidates might be required to give the declensions or principal parts of any of these. But these Regulations are defective not only in form but in substance—not only in spirit but in matter. Without going into further details in order to justify this statement, I may mention, by way of illustration, that at the First B.Sc. Examination, under the head *Electricity*, there is no distinct reference to any of the quantitative laws of the science, and it is only by a laxity of interpretation quite unsuited to the subject that an obscure allusion to Ohm's Law can be discovered—the great law expressing the connection between the strength of an electric current and the nature of the circuit which it traverses; while, under *Heat*, no liberality of interpretation could detect the smallest trace of the Dynamical Theory of Heat. This last omission, however, ceases to be surprising when we find the steam-engine classed with the common pump and forcing-pump; the hydrostatic press, the barometer, and the air-pump, under *Hydrostatics*, *Hydraulics*, and *Pneumatics*. It might have been natural a hundred years ago to look for Newcomen's atmospheric engine among such company; but, even then, James Watt had nearly converted the old atmospheric engine into the modern steam-engine.

But there is no need to enter upon any minute investigation of the Regulations for these examinations, in order to be convinced that their effect upon the study of Physics must be unfavourable. The small amount of encouragement which they hold out to pursue this subject seriously is shown by the fact that a London Bachelor of Science is not required to have any more knowledge of heat, magnetism, or electricity than candidates for degrees in Medicine are required to show at the "Preliminary Scientific (M.B.) Examination," which, in the usual course of things, is taken one year after Matriculation; and also by the fact that the papers in Mechanical and Natural Philosophy set at the Second B.Sc. Examination are identical with those set in the same subjects at the Second B.A. Examination. I have no fault to find with one side of this last arrangement; I have already given reasons for considering that Physics ought to occupy an important place in general education, and, from this point of view, the physical subjects for the Second B.A. Examination are, on the whole, not injudiciously chosen; but it is certainly strange that a degree in Science should not imply any greater acquaintance with the fundamental principles of Mechanics than is demanded of candidates for the degree of Bachelor of Arts, the examination for which is in the main literary and classical. Another fact, which may be regarded as a sort of experimental proof that the examinations of the University of London do not promote such a study of the elements of Physics as can serve as the foundation for a more advanced study, is that for the last five years a special examination for Honours in Experimental Physics has been held in connection with the First B.Sc. and Preliminary Scientific (M.B.) Examinations, at which a Medal and a Scholarship of 40*l*. a year, tenable for two years, are offered to the most deserving candidate in case of his exhibiting sufficient absolute merit, but hitherto the scholarship and medal have never been awarded, and only once has a candidate obtained a First Class at this examination.

The other examinations of the University of London into which Physics enters to a greater or less extent, are, that for the degree of M.A. in Branch II., and those for the degree of D.Sc. in certain branches; but as these examinations come at a stage of a man's career at which it may be supposed that his methods of study are not greatly influenced by the regulations of examining bodies, and as, moreover, the Regulations of the University relative to these degrees do not go much into detail, there is no reason for dwelling upon them in connection with my present subject.

I do not propose to say much about that part of the examinations for which the Examiners, rather than the Senate, are directly responsible; but there are one or two considerations which, although sufficiently obvious, it may be worth while to point out. First of all, however, I shall venture, presumptuous as it may be thought, to make one remark on the choice of the persons best fitted to be examiners. It has more than once been claimed as a special merit of the University of London, that the examiners are not teachers, or at least that they have nothing to do with teaching the candidates whom they are called upon to examine. Fortunately, however, this is not the case. As a matter of fact, the great majority of the examiners are always teachers, and it may quite well happen, at least at some of the smaller examinations, that a majority of the candidates have been pupils of a single examiner. But I venture to think that, instead of this state of things being considered as a more or less regrettable accident, it ought to be recognised as natural and desirable. If the real object of the examinations be to promote good teaching and sound learning, it is most important that, in setting the questions, the examiners should always keep in view their probable effect in giving direction to the studies of future candidates; and there can be no doubt that the men who are both most likely and most able to do this are those whose constant business it is to consider how the subjects in which they have to examine can be best brought before the minds of learners. Moreover, it is very difficult for examiners who are not also teachers, and teachers accustomed to pupils who are at about the same stage of advancement in their studies as the majority of the candidates, to know what amount of knowledge it is reasonable to expect. A man, however minute his own knowledge of his subject may be, generally soon forgets the exact steps by which he acquired it; and, unless he is in frequent contact with the minds of learners, he is no longer able to tell what, at any particular stage, it is creditable to know, and what it is disgraceful to be ignorant of. And again, though this perhaps is a less important consideration, the necessity which a teacher is under of periodically reviewing the whole round of his subject, is a great help towards a varied selection of questions.

With regard to the particular kind of questions which are most desirable in examinations like those of the University of London, I wish to say only a very few words. If the general considerations to which attention has been drawn in an earlier part of this lecture are of any value, it follows at once that examination questions in Physics ought to be selected with a view to testing the reasoning power and not the memory of candidates. If what are called *book-work* questions are admitted at all, they should be such as will bring out the power of reproducing trains of consecutive reasoning, and bringing facts to bear on the establishment of general conclusions, and not the power of simply recollecting individual facts. It may be said that such questions would be unfairly difficult. I can only say in reply that, if teaching were what it should be, I do not believe that this would be the case; but if it should be found to be so, I maintain that the inference is, not that any other style of examining in Physics should be adopted, but that the whole subject should be dropped. A late very distinguished member of the University once said that, in the case of candidates for Matriculation, all that could be fairly required at the examination in Physics was evidence of "correct acquisition." It would in my opinion be only a little more absurd to say that all that ought to be required at an examination in Geometry is evidence of the "correct acquisition" of Euclid. If Physics is not a subject upon which the intelligence should be exercised from the very beginning, it seems to me to be a waste of time to teach it at all.

The consideration of the kind of questions that are best fitted to be of use in promoting improved methods of teaching and learning, suggests a remark which bears upon the distinction that has often been pointed out between the subjects which it is desirable to teach and those which are most suitable for examinations. In the particular case of Physics, I am inclined to think that the very elementary parts of such branches as Heat and Electricity are not well adapted to form the subjects of examinations like those we are considering, where the examiners have no means of knowing the exact points of view from which the matters dealt with have been presented to the candidates. My reason for this opinion is the difficulty in these subjects of setting questions which require anything more on the part of candidates than mere exercise of the memory, and which at the same time are not unreasonably hard. As a practical inference, it appears to me that, if the amount of acquaintance with Heat, Electricity, and Magnetism represented by the London Regulations for the First B.Sc. Examination (supposing the regulations to be strictly interpreted) is all that can be fairly demanded at this stage of a student's progress, it is at least a question whether these subjects should not be deferred until a more advanced stage, when something more than descriptions of apparatus or the solution of arithmetical problems might be reasonably required.

If any of my audience have listened to this lecture with the consciousness that they will soon be going up to one or other of the examinations that I have been discussing, it may very possibly seem to them that I have been pleading throughout for making these examinations more difficult. To any to whom this seems to be the tendency of my remarks, I would venture to suggest one or two further considerations. In the first place, I fully admit that if examinations in Physics were to be such as I have advocated, that is, if they required candidates to *think*, while the teaching of Physics remained what too much of it now is—a mere loading of the *memory*—candidates would, no doubt, have a hard time of it; but the whole intention of what I have said is that examinations should be improved *in order* that teaching may be improved through their influence; and I believe that if teaching were what it should be, good examinations would be found to be no more difficult than bad ones. I may also observe that after all the precise degree of difficulty which an examination presents is not the most important consideration even for an intending candidate; what it really is important, not only for candidates but still more for those who regulate examinations, to consider is, what is the permanent educational value of the work which an examination requires, and not simply what is the amount of work needed. I have many a time in reading examination papers felt sincerely sorry for the writers when I saw how much labour they had evidently gone through in order to learn nothing—nothing that is of real use—and have thought how much the same amount of labour might have accomplished if it had only been better directed; and I beg leave to assure any who look upon examinations from the under side, that I have no wish whatever to add to the quantity of work that is already required of them; but what I do wish sincerely is, that whatever work they may be required to do in preparing for examinations may be such that they will be intellectually better and stronger for having done it. It cannot be too often repeated that degrees and university distinctions are of no more value in themselves than the Queen's head upon the coin. unless the metal is genuine, the stamp only makes it into a lying counterfeit. This has been urged upon students over and over again; what I shall be glad if this lecture tends in any degree to accomplish, is to press the same truth upon the attention of our University authorities. It is important for them to remember that a man is not really either better or worse for all the degrees that they can give him; and that their boast should be, not in the length of their lists of graduates, but in the extent to which they have promoted "a regular and liberal course of education."

NOTES

ONE of the first results of the Transit of Venus expedition with regard to the geological aspect and vegetation of a comparatively little known island, comes to us from Rodrigues, and is contained in a communication from Mr. J. B. Balfour to Dr Hooker, under date, from the above island, of August 23, 1874. As a proof of the inhospitable, or rather the uncivilised nature of the island, it is stated that the party belonging to the expedition were warned in Mauritius before starting for Rodrigues that they must take everything from the former island that they would be likely to require as it would be impossible to get anything at Rodrigues, and even labour is most difficult to be obtained. After providing himself with various articles of absolute necessity, Mr. Balfour started from Mauritius, and after a voyage of exactly a week, landed at Rodrigues on August 18. The appearance of the island as seen from the vessel while steaming along near the coast, presented few features which could be looked upon as evidencing any large amount of granite entering into its constitution. On the contrary, the columnar structure of the cliff lines, both on the coast and in the interior, along with the terraced aspect of many of the ridges separating deep ravines, cutting far back into the island, clearly showed that, whether the main mass of the island were granite or not, certainly at some period of its history it had been the scene of very extensive volcanic action. On the 19th of August an excursion was made across the island to survey the channel on the south side. The vegetation on the island is very rank. The trees do not grow to any great size, and in most places do not form thick forest, but are scattered singly over the slope of the hills. It is only in the deep valleys and gorges that they grow into thick forest. The commonest tree seems to be the Vacoa (*Pandanus*), of which there are probably at least four species. The under-scrub is very dense and very spiny, which renders walking through it by no means a pleasant task. Neither ferns nor mosses appear to be very abundant, but lichens are pretty plentiful, especially in their pulverulent state; and in many places the basalt was nearly covered with white powdery patches. The basalt forming the rocks near Port Mathurin is, in its unweathered condition, a very beautiful compact stone, with large crystals of several minerals scattered through it. The difficulties in landing upon the island seem to be very great, owing to the extent of the coral reefs.

THE Yorkshire College of Science at Leeds was opened without ceremony on Monday, by the delivery of one of the introductory lectures by Mr. A. H. Green, the Professor of Geology and Mining. The other professors—A. W. Rücker, Dr. T. E. Thorpe, and W. Walker—give their introductory lectures during the course of the present week, and the teaching of the session will then be proceeded with. Very suitable buildings have been obtained, containing ample accommodation, which has been fully utilised for lecture-rooms, laboratories, &c., which are well furnished with the necessary appliances. Still, as Mr. H. Brown said, "they must look forward to having a noble building like that of Owens College, Manchester;" if the College is to maintain its position and to advance at all, it cannot but end in this. The number of students enrolled is as yet small, but, no doubt, will gradually increase. Prof. Green, in his address, spoke of the importance of a thorough training in abstract science as the necessary groundwork of a technical education. "Before they could understand," he said, "the practical application of a science, they must be master of the science itself. What was sometimes understood as technical education was a sheer impossibility, and a contradiction in terms. They could not explain the technical application of a science without first laying down the scientific groundwork on which it rested. A science like geology could not be taught piecemeal. Technical education in the popular sense was a misnomer, because the teaching which would limit the range of a man's vision to the subjects of which he could see the use did not deserve the name of education, the very essence of which was the strengthening of the intellect by mental exercise. It was his earnest wish that he might be able to give a teaching which in the end would have an important bearing on their practical occupations, and enable them to manage their mining, engineering, and other pursuits—in the conduct of which a knowledge of geology came in useful—better than if they knew no geology at all. But if he was to succeed in doing so, he must begin by telling them many things which at first sight would seem to be of no practical value whatever." With such a spirit as these words indicate, animating the professors of this new college, the best results may be expected from their teaching.

A MEETING of some of the friends of the late Dr. Stoliczka was held in the rooms of the Zoological Society on Friday, the 16th inst., at which it was determined to obtain, by subscription, a bust, to be presented to the Asiatic Society of Bengal, of which society Dr. Stoliczka was for some years before his death one of the honorary secretaries. A committee was appointed to act in concert with one previously formed in Calcutta, and upwards of 50*l*. was subscribed in the room for the purpose mentioned. Subscriptions, we are informed, will be received by Messrs. Grindlay and Co., 55, Parliament Street.

THE *Athenæum* announces that the *Contemporary Review* for November will contain an account of a new scientific discovery by Prof. Tyndall.

AMONGST the works which are progressing favourably at the Observatory of Paris we may mention the determination of the velocity of light, by MM. Fizeau and Cornu. These able physicists are using for their second station the Tower of Montlhéry. The light is transmitted to Montlhéry through a refracting telescope of 12 in. and returned to the Observatory with a 7 in. The distance between the Observatory and Montlhéry being 26 kilometres, the total distance traversed by the ray of light is 52 kilometres. The space of time required amounts to something less than one-thousandth of a second.

THE polishing of the great reflecting telescope is almost completed, The immense lens to be covered with silver by the Leon Foucault process, is nearly ready. It is said that everything will be finished by the beginning of May 1875.

AT Agram, the chief town of Croatia, a Croatian University was formally opened on Oct. 19 by the highest magistrate of the land, who is called the Ban, and exercises a kind of viceregal power on behalf of the Emperor of Austria. The University is to be called "Francis-Joseph," from the name of its founder. The Rector delivered a very able oration, summarising the progress of the higher studies in Croatia from the time when Maria Theresa established the Society of Sciences. Many delegates of foreign or other Austro-Hungarian Academies were present at the ceremony (Krakow, Berlin, Bologna, Pesth), and delegates from the Servian societies of learning. It is expected that the new University will play a most important part in the civilisation of the East, and be indeed the vanguard of European science in that direction.

MUCH remains to be done in this respect if the information we collect from Levantine papers be correct. It appears that in one of the principal islands of the Greek Archipelago some poor women have been imprisoned and starved, under the charge of sorcery. They were arrested for having attracted a host of locusts to their native land. The locusts not retreating, the persecution was extended to the husbands of the wretched creatures.

THE International Commission of Geodesy will hold its next meeting in Paris, in accordance with the decision come to at Dresden, where it held its sitting this year. The Government will assign it a public building for its meetings.

MR. J. E. TAYLOR, F.G.S., has discovered a buried forest in the Orwell. The forest is represented by a layer of peat containing trunks, leaves, and fruits of the oak, elm, hazel, and fir, associated with which are the remains of the mammoth. A bed of freshwater shells containing species not now living in the Orwell underlies the peat. Mr. Taylor remarks that this submarine forest is contemporaneous with others along the coast which existed previous to the depression separating England from the Continent.

MR. J. E. TAYLOR, who has done so much to create an interest in science in Ipswich, is to give a course of twenty lectures (free) in that town during the coming winter, on "Plants: their Structures and Uses."

AN important discovery has been made at Highwood, near the village of Ashill, in Norfolk, consisting of a vast collection of Roman remains in an oak-lined well, 40 ft. deep. The Norfolk and Norwich Archæological Society visited the spot on the 16th inst., when the well, under the superintendence of Mr. Barton, was emptied of its contents by a number of workmen. The well contains a great variety of articles, the most abundant being urns, of which about 100 have been obtained; more than fifty of these are perfect, and many of most beautiful form and ornamentation. There is considerable doubt as to the purpose which these wells were intended to serve; there are other two at Ashill, and others have been found elsewhere.

THE *New Quarterly Magazine* for October contains, with other articles of general interest, a paper by Mr. Richard Jefferies on "Small Farms." The writer notes the enormous development of science in modern farming, saying: "New plans, new inventions and discoveries follow each other in constant succession. The capabilities of agriculture seem inexhaustible. The number of clever and intellectual men who turn their attention to it multiply daily. It has its colleges, its professors, its students, and it would require a great volume to describe the machinery alone that has been contrived of late years, and is now in the market. The chemistry of agriculture would fill many more such volumes. Geology, botany, entomology, almost all the sciences, are pressing forward to its aid." Deprecating, in the present state of agricultural science, the advantages of small farms, Mr. Jefferies goes on to say: "The utility of bringing up a race of students instructed in chemistry, geology, entomology, mechanics, &c., in agricultural colleges, with the assistance of professors, if they are afterwards to be placed on small farms, is a matter of much doubt; they would have no room for the exercise of their attainments. . . . Whether it be considered from the tenant's own side, or from the labourer's, or from the landlord's, the balance of argument appears to be indisputably in favour of large farms. To the nation, to the ever-increasing population, the large farm offers a greater present produce, and possibilities of still further development. The political economist, who judges the prosperity of an occupation by the amount of capital attracted towards it, must also decide in its favour, for capital will never flow into small farms."

WE commend to the notice of the Goldsmiths' Company the letter from "A Jeweller's Assistant" in yesterday's *Times*. Let us hope that this, as well as the other wealthy City Companies, are now waking up to a sense of their responsibilities, and that they will lose no time in utilising the immense wealth at their disposal, and which has hitherto been utterly wasted, in the promotion of technical—which ultimately means scientific—education. Let them not provoke a "City Companies' Commission."

ON the 12th inst. was opened the London School of Medicine for Women. The Council had determined that no inaugural address should be given, and thus a day which the future may possibly prove to have been one of no little importance passed by unmarked more than by the fact that the first lecture had been given in a Medical School devoted exclusively to the teaching of the female sex. The school is now in full working order, and women can receive an education fitting them to practise medicine. The services obtained by this school need not stop short at preparing women for the medical profession. There are many branches of science allied to the study of Medicine, Chemistry, Botany, Comparative Anatomy, &c., in all of which a course of lectures is given as part of the medical education. These subjects are separately adopted by men as a means of gaining a livelihood. A knowledge of any one of these subjects is attainable equally by women as by men, and there is no reason why women should not achieve a scientific reputation and earn a fair competency by engaging in these studies and by imparting their knowledge to others.

IT is announced by the last Indian mail that a smart shock of earthquake was experienced in Central Ceylon early on the morning of the 19th of September, at five o'clock. The vibration was considerable, and was accompanied by a dull rumbling sound. The motion was from east to west, apparently; the rumbling was decidedly in the east. The shock appears to have been felt in the centre of the island only. Earthquakes in Ceylon are such rare events that this one has had a good deal of attention bestowed upon it.

WE would draw the attention of our readers to the excellent introductory lecture delivered by Prof. Leoni Levi at King's College, on "The Educational and Economic Value of Museums and Exhibitions," which is published in the *Society of Arts Journal* for the 16th inst. He gives many valuable suggestions as to the uses for purposes of popular teaching which might be made of our museums. He thinks that London is still deficient in museums, and states that there are at least some two hundred cities and boroughs which have taken no step to secure museums and public libraries for themselves.

THE *Augsburg Allgemeine Zeitung* of the 22nd inst. gives the following facts and statistics from the various University Calendars just published:—The University of Berlin shows the largest attendance, having had, in the summer term of 1874, 2,980 students and 187 professors. While this University had for a time the second place and Leipzig the first, the order is now reversed, and Leipzig follows with 140 professors and 2,800 students. Then comes Halle, with 1,055 students and 95 professors; Breslau, with 1,036 students and 107 professors; Munich, with 1,031 students and 114 professors; Tubingen, 921 students and 84 professors; Wurzburg, 901 students and 58 professors; Heidelberg, 884 students and 104 professors; Bonn, 858 students and 98 professors; Strassburg, 667 students, and 81 professors; Konigsberg, 603 students and 76 professors; Greifswald, 540 students and 58 professors; Jena, 493 students and 69 professors; Munster, 451 students and 27 professors; Erlangen, 442 students and 51 professors; Marburg, 440 students and 62 professors; Giessen, 342 students and 58 professors; Freiburg, 297 students and 52 professors; Kiel, 210 students and 62 professors; Rostock, 132 students and 38 professors. In these numbers the non-matriculated students are also included. The German-speaking Universities outside the German Empire show the following attendance:—Basle, 163 students and 62 professors; Berne, 332 students and 63 professors; Zurich, 331 students and 75 professors; Dorpat, 768 students and 67 professors; Graz, 932 students and 68 professors; Innsbruck, 615 students and 52 professors; Prague, students (?) and 122 professors; Vienna, 3,615 students and 227 professors. Vienna, therefore, is at the present time the largest German University.

M. HURQUERLOT, a gentleman who was largely interested in railway speculations, died a few months ago and left a legacy of 24,000*l*. to the city of Paris for the purpose of establishing a railway school. But the sum, although very large, having been considered insufficient for the purpose, the Municipal Council has been reluctantly obliged to reject the money, which will revert to the lawful heirs.

MORE than 18,000 young men have gone successfully through their examinations, and have been admitted as volunteers for one year in the French army. About half of that number have been rejected as not having received a sufficient education. The report of the examiners shows an improvement in the mean capacity of candidates. Many young men are admitted, without having to pass previous examinations, Bachelors of Arts, Sciences, or Letters, Pupils of Public Schools of Arts and Public Works and Mines, and Beaux Arts, and a few other institutions. The number of the volunteers of that class is about 4,000. Each volunteer has to pay besides a sum of 60*l.* to the Government. Education must be combined with money, in order to shorten the service in the remodelled French army.

THE study of "seaweeds" is probably affected as much by the general public as that of fish; and whether or not the great mass of people who visit the Brighton Aquarium and other similar resorts really go there with any idea of becoming more intimately acquainted with the wonders of the deep, there is no doubt that the exhibition of varieties of ocean plants would be as popular as that of fish. A seaweed growing in water is very different from seaweed cast up on the shore, and a careful selection and arrangement of specimens would greatly enhance the interest of the tanks, whilst at the same time their presence would prove beneficial to the fish. We recommend the hint to the notice of the authorities of the Brighton, Crystal Palace, and Southport Aquariums.

AN Industrial Exhibition is to be held at Leighton Buzzard for a short time about Whitsuntide 1875. The district to be represented is limited to a radius of twenty miles around Leighton Buzzard, and the proceeds of the exhibition will be devoted to the formation of a lecture fund for the purpose of securing courses of high class (largely scientific, we hope) public lectures in connection with the Working Men's Society, and the increase of the Society's library.

To increase the general instructiveness of their Museum, the Leeds Philosophical and Literary Society have published Descriptive Guides to the different collections of which it is composed. That on the British Birds, by Mr. L. C. Miall, is before us, containing a short and instructive account of each species exhibited. This method of combining instruction with amusement is one which it would be well if other public institutions were to adopt, instead of leaving their collections, often valuable ones, for the idle gaze of the many uninitiated, and the careful study of the but too few special students of special branches of science and art.

IN many parts of the coasts of this country where fish are abundant, enormous quantities are used as manure: in Cornwall and on the Eastern coasts this is particularly the case, but no means are adopted to convert the fish into a manufactured manure, and they are thrown, as caught, on the land. The same remarks apply to America. But recently a system has been adopted in certain localities by which the fish are prepared specially for manuring the land. At Lucages, Long Island, a factory has recently been established for preparing the surplus quantities of "Menhaden" caught near there. The oil is first extracted from the fish, and the residue is prepared in a certain manner and converted into "fish guano," which has a good reputation as a fertiliser.

ARRANGEMENTS have been made for placing on board one of the steamers running between Liverpool and New York, one of the "American Aquarium Cars," a newly invented contrivance for transporting live fish, which has succeeded very well in long overland journeys, and by means of which it is hoped to effect a useful interchange of living fish of various kinds between this country and America. There are many American fish which might with benefit be introduced into England, and we at the same time might transport to the other side of the Atlantic some varieties of fish which are not found there.

THE exhibition of insects in the Orangery of the Tuileries Gardens, Paris, has been brought to a close. The distribution of prizes took place on October 5. The higher medals were taken by a Viennese *savant* for a magnificent atlas exhibiting all the organs and forms of *Phylloxera vastatrix*; but the Phylloxera question is left open, and no reasonable solution appears to have been presented. Lectures were delivered daily on entomology, and every one of them was illustrated by projections with the solar microscope. Almost every kind of insect was thus presented to the public. The exhibition proved wonderfully successful; more than 20,000 persons paid the entrance fee, and the number of free tickets issued amounted to 30,000 in the brief space of twelve days.

WE have received a lecture on "The Life and Works of Dr. Priestley," delivered in Paris at the time of the celebration of the Priestley Centenary by M. W. de Fonvielle. It is published by Auguste Ghio, and is dated 1875.

THE additions to the Zoological Society's Gardens during the past week include a Bengalese Leopard Cat (*Felis bengalensis*) and a Common Paradoxure (*Paradoxurus typus*) from India, presented by Capt. W. Reynolds; a Great Eagle Owl (*Bubo maximus*), European, presented by Lord Londesborough; an Indian Fruit Bat (*Pteropus medius*) from India, presented by Dr. Stafford; a Monteiro's Galago (*Galago monteiri*) from Angola; a Tooth-billed Pigeon (*Didunculus strigirostris*) from the Samoan Islands, deposited; two Geoffroy's Doves (*Peristera geoffroyi*) from the Island of Fernando de Noronha, and a Gentoo Penguin (*Pygoscelis taeniatus*) from the Falkland Islands, new to the collection, purchased.

KENT'S CAVERN*

BEFORE entering on this, their tenth Report, the committee desire to express their deep sense of the great loss they have sustained in the decease of Prof. Phillips. No member was more regular in his attendance at the meetings of the Committee or felt a livelier interest in the investigation with which they are charged. On March 18, 1874—little more than a month before his lamented death—though suffering from a severe cold, he visited the cavern, when he carefully inspected those branches of it which had been explored, and expressed his admiration of the clearness and importance of the evidence bearing on the question of human antiquity which had been obtained.

The investigation has been pursued without intermission during the entire period which has elapsed since the meeting at Bradford in 1873; the mode of operation has been that described in previous Reports and followed from the commencement; the work has been performed in the most satisfactory manner by the same workmen; and the superintendents have continued their daily visits and carefully recorded the results from day to day.

The interest felt in the exploration by the inhabitants and visitors of Torquay has suffered no abatement, and the superintendents have conducted a large number of persons through the cavern, including the members of the South-western Branch of the British Medical Association during a meeting of that body held at Torquay, and also the members of the Birmingham Natural History and Microscopical Society whilst on a scientific excursion to South Devon.

During May 1874, an arrangement was made with the superintendents by Prof. A. Newton of Cambridge, for Mr. Slater, one of the naturalists of the Rodrigues Transit Expedition, to spend some time in the cavern, studying the mode of exploration followed there; it being probable that he might have to explore some very interesting caves which exist in the island. Mr. Slater reached Torquay on the 1st of June, when everything was done to facilitate his purpose, and he spent some days watching the men at work.

Live rats continue to present themselves in the cavern from time to time, and prove occasionally to be very troublesome. Thus, in October 1873, one carried off six candles during the afternoon from a spot selected because it was believed to be inaccessible even to rats, and which had been used as the candle store during a period of three years without any previous loss of the kind; and in the same month another ate through one of the workmen's basket between the hours of nine and one, and carried off his dinner. A large number have been captured during the last twelve months.

---

* Tenth Report of the Committee for Exploring Kent's Cavern, Devonshire. (Abstract.)

During summer, bees have frequently been seen and heard in the innermost branches of the cavern, very far beyond any glimmering of day-light.

The branches of the cavern in which the researches have been carried on since the ninth Report was presented in 1873, are those known as the Long Arcade, Underhay's Gallery, the Cave of Inscriptions, and Clinnick's Gallery. The exploration of the former two has been completed, but the work is still in progress in the latter. The deposits have been, in descending order, like those reported last year: first, or uppermost, the Granular Stalagmitic Floor, from 12 to 30 inches in thickness; second, the Cave Earth, which has nowhere been more than two feet deep, but has rarely exceeded one foot, and has occasionally thinned out altogether; third, the Crystalline Stalagmitic Floor, usually exceeding the Granular Floor in thickness, but which had, in certain places, been partially broken up and removed by some natural agency before the deposition of the cave earth; and, fourth, or lowest known, the Breccia, consisting of materials not derivable from the cavern hill, and which appear to have been introduced through openings or mouths of the cavern at present choked up and unknown. The depth of this deposit has not been ascertained, as its bottom has nowhere been reached.

In the Long Arcade the surface of the upper or granular stalagmite was occupied with large natural "basins," some of them 12 inches deep, such as have been described in previous Reports. The following points of interest were noted respecting them during the progress of the work:—

1. The stalagmite forming their walls was harder and tougher than that surrounding them; whilst that composing their bottom was comparatively soft and friable.

2. The walls were traceable through the entire thickness of the Stalagmitic Floor; in other words, during the entire deposition of the floor, basins had existed in it, the bottom rising with the walls, but at a slower rate.

3. The water which filled them in rainy seasons passed down through the bottom in three or four hours at most.

4. Immediately beneath most of the basins there was an almost continuous interspace of about half an inch in height between the bottom of the stalagmite and the top of the cave earth; caused, no doubt, by the finer particles of the deposit being carried by the percolating water through interstices to a lower level.

It happened that the exploration of that part of the Arcade in which the basins were thus numerous was carried on during a wet season, when the water, passing through the Stalagmitic Floor, as just mentioned, caused two or three slips of the deposits beneath. In the largest of these a well-rolled flint nodule was found with some remains of animals. No such specimen had been previously seen within the cavern.

At the junction of the Long Arcade, the Cave of Inscriptions, and Clinnick's Gallery, there is a huge boss of stalagmite, in the form of the frustrum of an oblique cone, 43 feet in basal circumference, 14 feet along the slant side—which forms an angle of 40 degrees with the horizon, and thus gives a vertical height of fully 13 feet for the mass—and contains probably no less than 630 cubic feet of stalagmite. Its base consists of the older or crystalline stalagmite, and the upper portion, without any intervening cave earth, of the granular variety, which not only surrounded and completely encased the former, but, by flowing in copious sheets, formed the thick Granular Floor, spreading without a break and for great distances in every direction. Though inscriptions exist in various parts of the cavern, this mass is, with perhaps the exception of the almost inaccessible Crypt of Dates, more thickly scored with names, initials, and dates than any other equal area within the cavern; and hence it has acquired the name of the Inscribed Boss of Stalagmite. The inscriptions occupy its outer or most exposed semi-surface, where in certain places they form a network. Letters of all sizes, from some fully three inches in height to others as small as ordinary writing, cross each other and thus add to the difficulty of decipherment. Some of them were cut with great care and finish, and must have occupied a large amount of time, whilst others were but hasty scratches. It seems to have been somewhat fashionable to surround the inscriptions with rectangular parallelograms, varying from 6·5 to 3·75 inches in length, by 5·5 to 3·5 in breadth. In at least one or two cases the cutting of the parallelogram preceded that of the inscription, as the latter extends beyond the boundary. Not unfrequently several names occur together, whether within a parallelogram or not, and in each such case the entire work seems to have been performed by the same hand. At least four of them belong to the seventeenth century, and the earliest of the series, so far as at present known, is that of "Peter Lemaire, Rich. Colby, of London, 1615." Amongst the names is that of "Deluc," probably the well-known geologist, "Champernowne," that of a well-known old Devonshire family, and several prevalent in the immediate district.

In 1846 the Torquay Natural History Society appointed a committee of three of its members, including the two superintendents of the present exploration, to make some very limited researches in the cavern. One of the spots which that committee selected was in Clinnick's Gallery, immediately adjacent to the inscribed boss, where they made a very small excavation. The materials dug up on that occasion were, as usual at that time, thrown on one side, where they remained until removed in May last when they were taken out of the cavern by the present committee. Before this was done, the surface of the mass was carefully examined to ascertain what thickness had been reached by the stalagmite which, as the superintendents well knew, had been accreting on it during the last twenty-eight years. The result was a small film not thicker than ordinary writing-paper, and limited to two examples, each covering not more than two or three square inches.

Underhay's Gallery was found, when the work of exploration was completed, to be about 10 feet long, from 2·5 to 7 feet wide, and from 6 to 7·5 feet in height, the latter measurement being taken from the bottom of the excavation. Before the committee commenced their operations there, its mouth was almost entirely closed with large masses of limestone. Notwithstanding this, the late Mr. Underhay, for several years guide to the cavern, forced himself into the gallery about fourteen years ago, even though after passing the entrance, he must have found the Granular Stalagmitic Floor within a foot of the roof in certain places. Here he found *on* and *sticking into* the stalagmite a few small bones which he succeeded in bringing out, when they were found to be phalanges of human feet. Though these specimens did not appear to be of an antiquity at all approaching that of the cave-hyæna and his contemporaries, the superintendents, who were familiar with them, very carefully watched the progress of the work, in the hope of finding some further traces of the skeleton; and on reaching Mr. Underhay's very limited diggings they met with a series of bones, all *on* and *in* the stalagmite, some of which were certainly human, whilst others were as clearly not so. The whole were at once sent to Mr. George Busk, a member of the committee, who has been so good as to forward a report on them to the effect that twenty-eight of the specimens are human, and include an astragalus, a navicular bone, a trapezium, a patella, a metatarsal, an ecto-cuneiforme, phalanges of fingers and toes, and fragments of humeri, ribs, and vertebræ; that they appear to be the remains of an adult individual of small size and delicate make, and probably of a female, on which point, however, it is impossible to speak positively; that the bones are not necessarily of any very remote antiquity; that the remaining specimens are not human, but belong to small sheep or goat, probably the former, which must have been of the smallest Welsh type.

When the very contracted character of this gallery, prior to its excavation by the committee, is borne in mind, it is difficult to understand how the remains were introduced. There were neither potsherds nor charcoal, nor, in short, anything suggesting that the bones were the remnants of a body disposed of by cremation, such as were met with in another branch of the cavern in 1872; nor were there any marks of teeth on the bones such as might have been expected had they been taken thither by a carnivorous animal, or the relics of a skeleton buried or secreted there, of which all other portions had been carried off by some carnivore.

The only noteworthy objects met with in the Granular Stalagmitic Floor during the year were a tooth of bear, fragments of bone, one considerable "find" of coprolites, and charred wood on two occasions, all of which occurred in the Long Arcade.

The Cave Earth has yielded during the period under notice 187 teeth of various kinds of mammals, of which 94 occurred in Underhay's Gallery, 63 in the Long Arcade, 20 in the Cave of Inscriptions, and 10 in Clinnick's Gallery; 102 belonged to hyæna, 36 to bear, 27 to horse, 8 to elephant, 8 to fox, 4 to rhinoceros, 1 to lion, and 1 probably to wolf. There were also numerous bones and fragments of bone, of which some were gnawed, and a few appear to have been burnt. Coprolites were very abundant, 69 distinct "finds" having been met with during the twelvemonth. They sometimes, though rarely, consisted of a solitary ball, whilst at others upwards of 20 were lying together and not unfrequently cemented into large lumps. Occasionally the amount of matter of this kind found in a single day was sufficient to fill a large basket.

Fifteen specimens of flint and chert were also met with in the cave earth, 6 of them occurring in the Cave of Inscriptions, 5 in Underhay's Gallery, 2 in the Long Arcade, and 2 in Clinnick's Gallery. The finest of the series is No. 6324, found December 30, 1873, in the second foot-level, beneath the floor of granular stalagmite from 2 to 2·5 feet thick. It is a very symmetrical tongue-shaped tool, fashioned with much labour out of a chert nodule, and worked to an edge all round the perimeter except at the butt end, where portions of the original surface remain on both faces. It is 3·8 inches long, 2·3 inches in greatest breadth, 1·5 in greatest thickness, and convex on both faces, from each of which several flakes have been struck. Though fashioned out of a nodule, which is very rarely the case amongst the cave-earth implements, its symmetrical form and comparatively high finish are highly characteristic of the era to which it belongs.

No object of interest of any kind has been found in the Crystalline Stalagmitic Floor during the year; but the Breccia lying beneath it has been by no means unproductive. In this oldest of the cavern deposits the remains have been, as heretofore, exclusively those of bear, so far at least as is at present known, and in addition to a large number of bones, including a considerable portion of a skull, 441 teeth have been met with in it, of which 149 were in the Long Arcade, 115 in Underhay's Gallery, 91 in the Cave of Inscriptions, and 86 in Clinnick's Gallery.

Twenty-six specimens of flint and chert have also been found in this deposit, of which 10 occurred in the Long Arcade, 6 in Clinnick's Gallery, 5 in Underhay's Gallery, and 5 in the Cave of Inscriptions.

The finest of the series (No. $\frac{7}{11}$) and indeed one of the finest the cavern has yielded from the commencement, was found April 23, 1874, in the fourth or lowest foot-level, with 1 tooth of bear, fragments of bone, and a small chert flake (No. [illegible]) which had probably been rolled. It measures 4·5 inches in length, 3 inches in greatest breadth, 1·1 inch in greatest thickness, is very convex on one face, slightly so on the other, retains a portion of the original surface near the butt end, and is rudely quadrilateral in form, with the angles rounded off. Several flakes have been struck off each face, and the edge to which it has been reduced along its entire margin, except at the butt end, is by no means sharp; its surface is almost completely covered with an almost black, probably manganesic smut, whilst a slight chip near the pointed end shows it to consist of a very light-coloured granular chert. Several lines betokening planes, probably of structural weakness or perhaps of fracture, entirely surround it. If it has really been fractured, it must have occurred where the tool was found, and the parts have been naturally reunited without being faulted. Its character as well as its position shows that this fine implement belonged to the era of the Breccia.

This specimen is of considerable interest, both on account of the lines which cross its surface and of the position it occupied.

Amongst the flint implements found in Brixham Cavern that known as No. 6—8 has attracted considerable attention, and has been described and figured by Mr. John Evans, both in his "Ancient Stone Implements" and in the "Report on the Exploration of Brixham Cave." It was found in two pieces, the first on the 12th of August, 1858, the second, 40 feet from it, on the 9th of the following September; and it was not until some time after the latter date that the late Dr. Falconer discovered that the two fragments fitted each other, and when united formed a massive spear-shaped implement. The lines on the Kent's Cavern specimen just described show that it had either been fractured where it was found, or, what seems more probable, that it is traversed by planes of structural weakness, such that a slight blow would break it into two or more pieces, which a stream of water would easily remove and probably separate, and thus produce a repetition of the Brixham case.

The Kent's Cavern tool was found in a small recess in the wall, just within the outer or wider entrance of Clinnick's Gallery, within a very few feet of the Inscribed Boss of Stalagmite, and, as has already been stated, in the fourth foot-level of the Breccia; that is, at the greatest depth in the oldest of the cavern deposits to which the present exploration has been carried, and is thus wonderfully calculated to take the mind step by step back into antiquity.

First, very near the spot occupied by the specimen, there rises a vast cone of stalagmite, which an inscription on its surface shows has undergone no appreciable augmentation of volume during the last two-and-a-half centuries.

Second, prior to that was the period spent in raising the greater portion of this cone, which measures upwards of 40 feet in basal girth, reaches a height of fully 13 feet, and contains more than 600 cubic feet of stalagmitic matter.

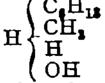
Third, still earlier was the era during which the cave earth was introduced, in a series of successive small instalments with protracted periods of intermittence, when the cavern was alternately the home of man and of the cave hyæna, and the latter dragged thither piecemeal so many portions of extinct mammals as to convert the cave into a crowded palæontological museum.

Fourth, further back still, was the period during which the base or nucleus of the cone or boss was laid down in the form of crystalline stalagmite.

Fifth, and earliest of all, was the time when materials not derivable from the immediate district were carried into the cavern, through openings now probably choked up, entirely unknown, and the direction in which they lie but roughly guessed at, when apparently the cavern-haunting hyæna had not yet arrived in Britain. At an early stage in this earliest era man occupied Devonshire; for prior to the introduction of the uppermost four feet of breccia, one of his massive unpolished tools, rudely chipped out of a nodule of chert, found its way into a recess in the cavern, and having a character such as to show that it must have lain undisturbed in the same spot until it was detected by a committee of the British Association.

SCIENTIFIC SERIALS

THE *Journal of the Chemical Society* for September contains the following papers communicated to the Society:—On the products of the decomposition of castor oil, No. 3. On the decomposition by excess of alkaline hydrate, by E. Nelson. The action of sodium hydrate mixed with water gives rise to the formation of a mixture of an alcohol and a ketone on distillation. The alcohol is an octylic alcohol, which the author regards as the secondary alcohol methyl-hexyl carbinol



$H\left\{\begin{array}{l}C_6H_{13}\\CH_3\\H\\OH\end{array}\right.$

The ketone is methyl-hexyl ketone. The olefine derived from the alcohol has been examined. The supposed heptylic alcohols of Städeler and Petersen turn out to be a mixture of octylic-alcohol with methyl-hexyl ketone.—On the action of nitrosyl-chloride on organic bodies, Part I. On phenol, by Dr. W. A. Tilden. The phenol is oxidised to quinone, which substance is then converted into chloranil, the nitrosyl-chloride being completely reduced—a certain amount to ammonium chloride.—Aniline and its homologues, &c., in coal-tar oils, by Watson Smith.—On the action of chlorine, bromine, &c., upon isodinaphthyl, by Watson Smith and James M. Poynting. The action of chlorine gives rise to the formation of a tetrachlorinated derivative, $C_{20}H_{10}Cl_4$. Bromine replaces seven atoms of hydrogen, giving rise to the compound $C_{20}H_7Br_7$. With concentrated sulphuric acid a conjugate acid is formed, of which the barium and sodium salts have been examined. Both the chlorinated and brominated derivatives are amorphous powders.—On hydrogen persulphide, by William Ramsay. The persulphide was prepared by first saturating alcohol with ammonia gas, and then passing sulphuretted hydrogen through the solution. The ammonium sulphide thus produced was shaken up with sulphur and a solution of strychnine in alcohol added. White crystals having the formula $C_{21}H_{22}N_2O_2H_2S_3$ separate out on standing. These crystals treated with sulphuric acid yield hydrogen persulphide in the form of oily globules, but the yield is small, and the separation from the sulphuric acid extremely difficult. The author finally adopts the old method of pouring calcium persulphide into hydrochloric acid. Analyses of the compound thus obtained gave results indicating a formula between H_2S_7 and H_2S_{10}. The properties of the persulphide have been examined in some detail.—The journal contains its usual valuable collection of abstracts.

Geological Magazine, Oct. 1874.—The original articles contained in this number are (1) a continuation of Mr. Lechmere Gupp's article on West Indian Tertiary Fossils; (2) Notes on the impression of *Palæontina oolitica* in the Jermyn Street Museum, by A. G. Butler, including a discussion on its zoological place; (3) The structure of Lambay Porphyry, by Prof. Hull, a paper read before the Geological Society of Ireland; (4) Geology of West Galway and South-west Mayo, by S. H. Kinahan, an epitome of a communication made to the British Association; (5) Note on the Phonolite of the Wolf-rock, by S. Allport.

Zeitschrift der Œsterreichischen Gesellschaft für Meteorologie, Sept. 15.—This number contains a description of the self-acting printing barometer, invented some years ago by Mr. Hough, director of the Observatory at Albany, U.S., but not very well known in Europe. By the employment of electricity, the barometer will record movements as slight as ·0005 in., and will print not only curves, but a register as well, at any required intervals per hour. The apparatus does not require frequent attention.—Among the *Kleinere Mittheilungen*, we have a notice of M. Goulier's aneroid, provided with a scale of heights beside the scale of millimetres. It is contended against this arrangement that two scales make a correct reading less easy; that the precision of the scale of heights, where the intervals between the lines are not equal, must be doubtful, and that the correction proper to each aneroid would not be easily applied to the scale of heights.—M. Mühry has an article On differences of temperature as a cause of latitudinal oceanic circulation. He maintains that two causes are at work, each of which tends to produce latitudinal circulation, namely, the diminution of the force of gravity towards the equator, and the increase of temperature with consequent expansion and diminished specific gravity. The lower strata of cold water rise at the equator towards the surface, and a corresponding descent of warm upper strata must take place in polar regions. With regard to the debated question on the point of greatest density of sea-water, he holds it to be the same as that of fresh water, and late experiments bear out his argument on this subject.

Bulletins de la Société d'Anthropologie de Paris, fascicule vi. tome 8, 1874.—In the closing number of the Society's last year's Reports, the remains found at Solutré, near Macon (in August 1873), formed a large proportion of the subjects of the papers. The assumed find at Solutré of a metallic ring, enamelled green, on one of the phalanges of the skeleton which had been uncovered in the presence of MM. de Quatrefages, Broca, and nearly fifty other persons, has been rejected by the Society as unworthy the consideration of scientific men; while M. Broca, in a detailed report of the investigation in which he on that occasion took the principal share, has clearly shown the impossibility of such a ring escaping his notice had it been present. M. Broca in another paper considers at length the characteristics of the various crania which have been found at Solutré since the spot was first examined by MM. de Ferry, Arelin, de Fremlnville, Lortet, and others, and described by the two first-named in their work "Le Mâconnais Préhistorique" (1870): and he draws attention to the various prehistoric and historic epochs at which interments have been made at Solutré, and by which the question of the true age of these remains has been surrounded with greater difficulties than belong to the palæontological character of any other similar spot in France. The prehistoric crania at Solutré are in a very bad condition; but they present a large capacity of nearly 1,600 cubic centimetres, with an index of only 82·87. Platycnemic tibiæ, with the characteristic columnar femures, were found, but M. Broca seems on the whole to assume that the earliest discovered men of Solutré belonged to a mixed race similar to those of the Belgian caves of La Lesse. M. Hamy has demonstrated that brachicephalic crania supervene at Solutré on the dolichocephalic, as at Cro-Magnon.—M. Topinard read a paper on the systems of craniometry, in which he endeavoured to show by the contradictory cranial determinations arrived at in reference to the Solutré and other recent finds, how important it is to show a definite method of cranial measurement. In the discussion which followed, M. Rochet opposed the notion that craniometry in art is based upon individual fancy more than scientific accuracy; while M. Broca admitted the defects of the present methods.—A note by M. P. Bert, on the twin monster known as the double-headed nightingale, led to a general discussion on double or twin monsters, and to the inquiry whether they were produced from two distinct embryos or from one germ endowed *ab initio* with the property of doubling or reproducing certain parts. It was generally admitted that external circumstances have no power to induce embryonic duality.—Madame C. Royer, in a very original paper on the origin of different human races, protested against the hypothesis which derives all European races from Asia, and endeavoured to show by the geological history of the earth that man must have appeared first on the great Austral continent, and radiated thence to the other continents. Her novel views were received with marked attention, and it was felt that if she should be able to adduce sound geological proof of her statements, her hypothesis of primary human migrations will be as important as it is original. Till she fulfils her promise of clearly expounding her theory, her arguments cannot, however, be accepted as more than ingenious speculations.

Revue d'Anthropologie, tome iii. No. 3.—M. Paul Broca supplies us in this number of the review, of which he is sole editor, with a comprehensive history of the course of observations which have led to the enunciation of the theory propounded by him (in the *Bulletins de la Soc. d'Anthrop. de Paris* for January and February 1874) in regard to the hygrometric properties of fossil crania. After considering the important but inadequately appreciated experiments made in 1859 by M. Welcker in reference to this point, he enters at great length into the consideration of the numerous carefully conducted series of observations and measurements by which he was led to the conclusions which he has adopted, and his paper constitutes, therefore, a most valuable *résumé* of the physical as well as the palæontological bearings of the subject.—M. Bérenger-Feraud, surgeon in the French navy, gives, as the result of personal investigation, an account of the different tribes who occupy the shores of the Casamanca in Intertropical Africa. This stream, on which the Portuguese and French have a few scattered trading stations, is one of the numerous rivers of Western Africa which take their source on the western slope of the Fouta-Djalon mountain-ranges. The author considers the Casamanca peoples under the three heads of primary or autochthonic, invading, and immigrating races; the first including the Feloups and Bagnouns, the second the Belantes, Mandingues, and Peuls, and the last the Onolofs, Saracolais, Machouins, Taumas, &c.; and passing each in review, he describes their habits, the form of fetichism followed by each, and their general social condition. Among the Balantes he notes the singular custom of making the duration of marriage responsibilities dependent on the conservation of the "pagua" or festive garment given to the wife by the husband on the occasion of their wedding. The woman who wishes to secure a divorce has merely to wear out her pagúa as fast as she can, and then present it in a tattered condition to her family, on which she obtains her release from the power of her husband. Among the same people a charge of sorcery, which is very common with them, can only be met by a public appeal to the ordeal of the "mançone" or "ago broumedion," which is said to be a decoction from the bark of a poisonous tree, and which it would appear is always fatal unless rich gifts have secured the copious watering of the draught by those to whom its preparation is confided.—MM. Daleau and Gassies give a report of the appearances presented by a cavern at Jollas, in the canton of Bourg (Gironde), which, on its recent exploration, yielded in a stratum of red diluvium below a solid calcareous bed, a rich deposit of bones, many of which had been cleft, but none of which belonged to extinct species, numerous flint implements similar to those found at Moustier and Solutré, but no remains of pottery, except in the upper part of the cavern, where they had probably been thrown aside long after the disuse of the cavern.

Zeitschrift für Ethnologie, heft vi. 1873.—The first article in this number gives some interesting details in regard to the almost unknown Red Indian tribe of the Tulus of Panama, believed to be the descendants of the Churchures, who successfully resisted the attempts made by the Spanish Conquistadores for their subjection. Representatives of these people appeared last year at Bogota with the object of making complaints against the collectors of caoutchouc, cacao, and elephant nuts, who had come to their woods and been guilty of violence against the tribe, and it was from his examination of these men that the author drew up his report.—In a suggestive article by Prof. Bastian on the nature of ethnology and its relations to geography, the author points out how essential the knowledge of physical laws is to the right comprehension of ethnology, which is in itself less a zoological history of man than a history of the geographical distribution of man considered in relation to physical habits, which, like the physical characteristics of different faunas and floras, depend primarily upon geographical position, and secondarily on climatic, geognostic, and other analogous conditions.—Herr Virchow laid before the society several skulls of the Goldi, a hitherto almost unknown tribe, who occupy the shores of the Amoor at the point where the Sangari and the Ussuri join the main stream. He is of opinion that these people are more nearly allied to the Tunguses than to the Esquimaux, the crania in his possession being remarkable for their high brachicephalic form and large cranial capacity.—In a letter from Dr. Bleek, addressed to the society, the writer draws attention to the peculiarity evinced by the Bushmen of becoming fairer and lighter in skin after they have for a time enjoyed good and abundant food, with the comforts of civilised life. This special characteristic he regards as a proof of the difference between these peoples and the negro races of South Africa, and as an evidence of their nearer affinity with more northern tribes. Dr. Bleek at the same time expresses his opinion that the dances by moonlight, which are systematically practised by the South African tribes, are connected with some form of moon-worship; while Dr. Fritsch, on the other hand, believes that these dances are in no way religious, and are simply called forth by the charm of tropical moonlit nights.—Herr Virchow exhibited some stone implements or wedges precisely similar to the so-called flint knives, which we are accustomed to assign to the Stone Age; yet these were of modern fabrication, being made in the present day in Syria, where they are used, amongst other purposes, to keep the different parts of the Syrian threshing machine (*tribulum*) in their places.

Astronomische Nachrichten, No. 2,007, contains the observations of position and magnitude of 148 comparison stars and 13 minor planets, made with the meridian circle at Berlin.—No. 2,008 contains the positions of 108 more stars, reduced to the mean equinox of 1870, and the positions of 20 planets, made by the same instrument. With the Berlin refractor the positions of some 58 planets have been determined, and some of them have been observed on a number of nights.—In No. 2,009 L. Schulhof gives an ephemeris and the following elements of Comet III. 1874, discovered by Coggia on the 19th of August:—

$$T = \text{July } 5{\cdot}16629 \text{ Berlin time.}$$
$$\pi = 347^\circ\ 20'\ 2''$$
$$\Omega = 213^\circ\ 12'\ 15''$$
$$i = 28^\circ\ 25'\ 41''$$
$$\log. q = 0{\cdot}15831$$

M. Geelmuyden gives elements of Coggia's first comet of 1874, and assigns a period of 10,445 years.—D'Arrest contributes a number of spectroscopic observations of Secchi's types III. and IV.—Ormond Stone gives a note on certain expressions of the distance of a comet from the earth, and a paper on Brunnow's method of correcting the orbit of a comet.—Dr. Holetschek gives an ephemeris of Borrelly's comet, the two last positions of which are—

		R.A.	DEC.
Oct. 29	...	6h. 21m. 9s.	+ 50° 37′·6
Nov. 2	...	6h. 5m. 11s.	+ 47° 36′·7

and an ephemeris of Coggia's comet of the 19th of August—

Oct. 29	...	5h. 0m. 41·8s.	− 0° 12′ 55″
Nov. 2	...	4h. 48m. 46·4s.	− 1° 49′ 50″

Memorie della Società degli Spettroscopisti Italiani, August.—Father Secchi contributes a paper discussing the theory of solar spots set forth by Galileo, and he compares the theories and observations of Wilson, Kirchhoff, Faye, and Gautier. Tacchini adds a note discussing M. Faye's theory of the formation of solar spots, and opposing it on the ground that spots and faculæ seem to accompany eruptions. Tacchini also gives notes on the positions of the chromosphere where magnesium vapour was observed in January last, and he also mentions the position of prominences accompanying spots at the limb, and containing metallic vapours. The magnesium line and 1474 occur most frequently.—Notes and measurements of the comet (Coggia) made by E. Dembowski with a 7-inch Merz, together with drawings of the nucleus, appear in this number.—Schiaparelli contributes a note on the new star observed in Sagittarius in 1690. He thinks it the same as the variable star S Sagittarius, R.A. 287° 40′, Dec. 19° 18′.—Tacchini gives a table with notes showing the number of meteors, with their brightness, observed in each fifteen minutes from 10h. 30m. to 13h. 15m. on the 9th, 10th, and 11th of August last. The radiant point

SOCIETIES AND ACADEMIES

MANCHESTER

Literary and Philosophical Society, Oct. 6.—Rev. William Gaskell, M.A., vice-president, in the chair.—On the ossiferous deposit at Windy Knoll, near Castleton, by Mr. Rooke Pennington, LL.B.—On some teeth from a fissure in Waterhouses Quarry, in Staffordshire. Mr. Pennington called attention to some teeth of a bison (*Bos priscus*) from a fissure in a quarry at Waterhouses. The animal had evidently fallen in while coming to drink at the river Hamps. It had been erroneously described as an Irish elk.—On the extent and action of the heating surface for steam boilers, by Prof. Osborne Reynolds, M.A.—Dr. Joule made a further communication respecting his mercurial air pump described in the Proceedings for Dec. 24, 1872, and Feb. 4, Feb. 18, and Dec. 30, 1873. He had successfully made use of the glass plug proposed in the Proceedings for Feb. 4, 1873. This he constructs by blowing out the entrance tube and grinding the bulb thus formed into the neck of the thistle-shaped glass vessel. To collect the pumped gases he now employs an inverted glass vessel attached to the entrance tube and dipping into the mercury in the upper part of the thistle glass.

WINCHESTER

The Winchester and Hampshire Scientific and Literary Society held the first meeting of its sixth session on Oct. 19; Dr. Heale, treasurer, in the chair.—The Rev. F. Howlett, F.R.A.S., delivered an introductory address, noticing many of the more important discoveries made during the past year in various departments of scientific research.

NATURE

A WEEKLY ILLUSTRATED JOURNAL OF SCIENCE.

"To the solid ground
Of Nature trusts the mind which builds for aye."—WORDSWORTH

No. 236, VOL. 10] THURSDAY, MAY 7, 1874 [PRICE FOURPENCE

Registered as a Newspaper at the General Post Office.

[All Rights are Reserved

BRITISH ASSOCIATION for the ADVANCEMENT OF SCIENCE,

22, Albemarle Street, London, W.

The NEXT ANNUAL GENERAL MEETING will be held at BELFAST, commencing on WEDNESDAY, August 19.

President-Elect,

Professor TYNDALL, D.C.L. LL.D. F.R.S. F.C.S.

NOTICE TO CONTRIBUTORS OF MEMOIRS.—Authors are reminded that, under an arrangement dating from 1871, the acceptance of Memoirs, and the days on which they are to be read, are now, as far as possible, determined by Organising Committees for the several Sections before the beginning of the Meeting. It has therefore become necessary, in order to give an opportunity to the Committees of doing justice to the several communications, that each Author should prepare an Abstract of his Memoir, of a length suitable for insertion in the published Transactions of the Association, and that he should send it, together with the original Memoir, by book-post, on or before August 1, addressed thus:—"General Secretaries, British Association, 22, Albemarle Street, London, W. For Section ." If it should be inconvenient to the Author that his paper should be read on any particular day, he is requested to send information thereof to the Secretaries in a separate note.

G. GRIFFITH, M.A.,
Assistant General Secretary, Harrow.

ROYAL INSTITUTION OF GREAT BRITAIN,

ALBEMARLE STREET, PICCADILLY, W.

RICHARD A. PROCTOR, Esq., Author of "Saturn," "The Sun," &c., will, on SATURDAY next, May 9, at Three o'clock, begin a Course of Five Lectures "On the Planetary System."

NEVIL STORY MASKELYNE, Esq., M.A. F.R.S. Keeper of the Mineral Department, British Museum, will, on THURSDAY next, May 14, at Three o'clock, begin a Course of Four Lectures "On Physical Symmetry in Crystals."

Subscription to each Course, Half-a-Guinea; to all the Courses in the Season, Two Guineas.

ROYAL COUNCIL OF EDUCATION.—

The Laboratory and Class-rooms of Berners College are open for Pupils EVERY DAY and EVENING. The subjects of the above Examinations can be studied either Privately or in Classes. Fees moderate. Analyses and investigations conducted.—Apply to Prof. E. V. GARDNER, F.E.S., F.S.A., 44, Berners Street, W.

FOR SALE.

AN AMATEUR'S COLLECTION of FOSSILS

(stratigraphically arranged) Precious Stones, Agates, Sea, Land, and Freshwater Shells. Suitable for a student of Primeval and Progressive Natural History. For particulars apply to X Y Z., care of the Publisher of NATURE, 24, Bedford Street, Strand, W.C.

CHARING CROSS HOSPITAL MEDICAL SCHOOL.

SUMMER SESSION, 1874.

A Course of Lectures on Zoology and Comparative Anatomy will be delivered by A. H. GARROD, Esq., Fellow of St. John's College, Cambridge, preparatory for the Examinations of the University of London, Fellowships of the College of Surgeons, and Civil Service. Fee for the Course, £3 3s.

FRANCIS HIRD, Dean

KING'S COLLEGE.

GEOLOGY.—EVENING CLASSES

A Course of Lectures on "The Lower Forms of Past Life as illustrated by Fossils," will be given by the Rev. THOS WILTSHIRE, M.A. F.G.S. on Monday Evenings, commencing April 27th. There will be also one or more Field Lectures in the neighbourhood of London during the present Term, and an Excursion of two or three days' duration at a distance from London. For additional information apply to the Secretary, King's College, Strand, London.

PRELIMINARY EXAM. IN ARTS, COLL. SURG., June 1874.

MR. HANBURY, M.A., Wrangler and late

Senior Scholar of his College, will shortly begin to read with Classes for this Examination. Mr. Hanbury is assisted by efficient Lecturers in French, Chemistry, and Classics, and has passed several Pupils for this Examination, to whom references are allowed. An early Class will commence towards the latter part of February and a later one about Lady Day. Fee for the Course, from 7 to 12 guineas, according to the time of commencement and number of subjects taken up.—Address, 24 Old Square, Lincoln's Inn, W.C.

MATRICULATION EXAMINATION, LOND. UNIV., June 1874

MR. HANBURY, M.A., Wrangler and late

Senior Scholar of his College, reads with Pupils for this Examination. Mr. Hanbury is assisted by efficient Lecturers in French, Chemistry, and Classics, and has been particularly successful for this Examination, having passed fifty-three Pupils, to whom references can be given. An early class about Lady-day, and a later one will commence the middle of February. Fees for the two, 14*l.* and 10*l.* 10*s.* respectively. For further particulars, address to 24, Old Square, Lincoln's inn, W.C. Two of Mr. Hanbury's pupils passed the Matriculation Examination in January 1873, in the Honours-list, seventh and fourteenth respectively.

A few Residents can be accommodated in Mr. Hanbury's house, at Clapham

ODONTOPTERYX TOLIAPICUS (Owen).

—Casts of the Head of this new rare Bird from the London clay of Sheppey, described by Prof. Owen, and formerly in the possession of Mr. Bryce M. Wright, can now be procured. Price 2*s.* 6*d.* each; coloured, 4*s.* BRYCE M. WRIGHT, Dealer in Minerals, Fossils, Shells, Ethnological and Ethnographical Implements, 90, Great Russell Street, Bloomsbury, London.

SCIENTIFIC BOOKS.—A few copies can

still be had of Sowerby's Mineral Conchology, British and Exotic Mineralogy, English Fungi, British Miscellany, Zoological Journal, Genera of Shells, Species Conchologorum, Tankerville Cat., &c., &c., as well as a large stock of second-hand books on Geology, Conchology, Entomology, &c. &c. SOWERBY, 167A, Strand.

LONDON INTERNATIONAL EXHIBITION, 1874.—OPEN DAILY, 10 a.m. to 6 p.m.

THE FRENCH PICTURE GALLERIES are NOW OPEN.

THE EXHIBITION OF WINE IS OPEN DAILY from Twelve to Five. Visitors to the Exhibition will be charged 6d extra for admission to the Cellars of the Royal Albert Hall. Entrance Kensington Road. Exhibitors of Wine are allowed to have their wine tasted by visitors.

LONDON INTERNATIONAL EXHIBITION.

SEASON TICKETS.

A. Non transferable Ticket … … … … … … … … £2
B. Non-transferable Ticket, with 120 artisans', or 240 school tickets … … … … … … … … … £3
C. Transferable Ticket, with 100 artisans' or 400 school tickets £5

Season Ticket holders of £3 and £5 tickets are registered as MEMBERS FOR PROMOTING TECHNICAL INSTRUCTION.

CHARGES FOR ADMISSION.—1s daily, except on Wednesdays, 2s. 6d.

LONDON INTERNATIONAL EXHIBITION.—A MILITARY BAND PLAYS in the French Garden on THURSDAYS, from Three to Five, and in the Western Annexe on SATURDAYS, from Three to Five

ANTHROPOLOGICAL INSTITUTE OF GREAT BRITAIN AND IRELAND,

4, St. Martin's Place, Trafalgar Square, W.C.

(In which are united the Anthropological Society of London and the Ethnological Society of London.)

President … … … Prof. Busk, F.R.S.
Treasurer … … … Rev. Dunbar I. Heath, M.A.
Director … … … E. W. Brabrook, Esq. F.S.A.

The Institute will meet on Tuesday, May 12th, at 8 o'clock p.m. precisely, when the following Papers will be read:—

1.—"On Statistics obtained from Schools." By Francis Galton, Esq., F.R.S.
2.—"On the Excess of Female Population in the West Indies." By Francis Galton, Esq. F.R.S.
3.—"On the Extinction of Families." By the Rev. H. W. Watson, M.A.
4.—"On Ancient Stone Monuments of the Nágás." By Major H. Godwin Austen, F.R.G.S.

An Exhibition, of Gold Objects recently brought from Ashanti, by Messrs. R. and S. Garrard and Co., will precede the reading of the papers.

J. FRED COLLINGWOOD, *Secretary*.

NATURAL SCIENCE.—An Associate of Royal School of Mines, Whitworth Scholar, and Forbes' Medallist, is open to an Appointment in Chemistry, Physics, or Biology.—Address, A.R.S.M., Publisher of NATURE, 29, Bedford Street, Strand, W.C.

REQUIRED, a MATHEMATICAL and NATURAL SCIENCE MASTERSHIP in a good School, by a CAMBRIDGE HONOUR-MAN.—Address—Alpha, care of the Publishers of NATURE, 29, Bedford Street, Strand, W.C.

WANTED.—An Assistant with a knowledge of Astronomy, Chemistry, and Photography for Observatory Work connected with Spectroscope.—For terms, &c., apply by letter to R.S.N., care of the Publishers of NATURE, 29, Bedford Street, Strand

WANTED to PURCHASE, a CLASSIFIED COLLECTION of BRITISH BIRDS' EGGS. Must all be well authenticated.—Apply, stating terms, to E. E. B., care of Messrs. MACMILLAN and Co., Bedford Street, Strand, W.C.

ICE SAFES & WENHAM LAKE ICE.

THE
WENHAM LAKE ICE COMPANY'S CELEBRATED ICE
(In Town or Country),
American Ice, Water Pitchers, Ice Butter Dishes, Ice Cream Machines.
PRIZE MEDAL & NEW DUPLEX REFRIGERATORS,
Fitted with Water Tanks and Filters, and all Modern Improvements,
CAN BE OBTAINED ONLY AT THE SOLE OFFICE,
THE WENHAM LAKE ICE COMPANY,
125, STRAND, LONDON, W.C. (CORNER OF SAVOY STREET)
Illustrated Price Lists free.

W. LADD & CO.'S

DIFFRACTION SPECTROSCOPE

In leather case for the pocket. Price 15s.

MANUFACTURERS OF SCIENTIFIC & EXPERIMENTAL APPARATUS BY APPOINTMENT TO THE ROYAL INSTITUTION OF GREAT BRITAIN.

11 & 12, BEAK STREET, REGENT STREET, W.,
AND
199, BROMPTON ROAD, S.W.

ESTABLISHED 1843.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 500 Medical Men to be the most effective invention in the curative treatment of Hernia. The use of a steel spring, so often hurtful in its effects, is here avoided; a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, 2 inches below the hips, being sent to the manufacturer,

JOHN WHITE, 228, Piccadilly,

Price of a Single Truss, 16s., 21s., 26s. 6d., and 31s. 6d.
,, Double ,, 31s 6d., 42s., and 52s. 6d.

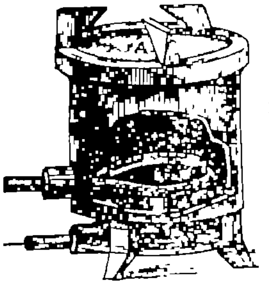
FLETCHER'S

NEW LOW TEMPERATURE BURNER (PATENT)



This Burner gives a range of heating power from a gentle current of WARM air to a BRIGHT RED HEAT, and is so perfectly under control that a common glass bottle may be placed on the tripod without protection and heated to any required temperature without the slightest risk of fracture. In practical use it dispenses with the necessity for drying-closets, sand-and-water baths, &c

For very low temperatures the ring must be lighted through the opening B; this causes a current of warm air to rise through the gauze above. For higher temperatures the light must be applied on the surface of the gauze A, which will give a large body of clear blue flame. A special pattern is made with a blast tube, by which the flame on the surface can be concentrated and urged until it gives almost a clear white heat, the temperature depending on the air supplied through the blast tube.

Price, without blast tube ... ... 7s. 6d.
,, with blast tube for high temperatures ... 9s. 0d.

UNIVERSAL FURNACE (GAS),

For High Temperatures (without blast) for Crucibles, Muffles, &c., in several sizes and patterns Special designs made to order.

NEW BUNSEN BURNERS, giving a range of temperature up to a clear white heat, 10s. 6d

HOT BLAST BLOWPIPES, giving temperatures exceeding the fusing-point of platinum, 11s 6d, 13s., 15s.

THE DEPTHS OF THE SEA:

An Account of the General Results of the Dredging Cruises of H.M.SS. *Porcupine* and *Lightning* during the Summers of 1868–69–70, under the scientific direction of

Dr. CARPENTER, F.R.S. J. GWYN JEFFRIES, F.R.S., and Dr. WYVILLE THOMSON, F.R.S.

By C. WYVILLE THOMSON F.R.S.

Director of the Civilian Scientific Staff of the *Challenger* Expedition.

Illustrated by 8 Maps and Plates and nearly 100 Woodcuts.

"The book is full of interesting matter, and is written by a master of the art of popular exposition. It is excellently illustrated, both coloured maps and woodcuts possessing high merit. Those who have already become interested in the dredging operations will, of course, make a point of reading this work; those who wish to be pleasantly introduced to the subject, and rightly to appreciate the news which arrives from time to time from the *Challenger*, should not fail to seek instruction from Prof. Thomson."—*Athenæum.*

"Marked throughout by logical command of facts, no less than by patience and skill in accumulating them, the mastery which Prof. Wyville Thomson shows over the results arrived at during this comparatively restricted series of explorations augurs well for the harvest of knowledge to be reaped, we may hope, in the course of the more adequately equipped and more extensive survey over which he has now gone forth in supreme control."—*Saturday Review.*

"Even to the non-scientific who understands neither Latin names nor Miller-Casella thermometers, this book may still be full of interest, if he who glances at it cares to see what a wonderful world he lives in, and how very little he knows of it. The book is worth having, if only for the illustrations. Looking at the engravings, it is not too much to say that no such illustrations of the peculiarly delicate and complicated forms of animal life have yet appeared."—*Times.*

"As a profoundly valuable contribution to science, as a literary effort of high order, or as an elegantly artistic volume, this book is worthy of the warmest praise. The simplicity of style and clearness of description are very high merits."—*Quarterly Journal of Science.*

"For all time will be a standard work in connection with this particular subject."—*Morning Post.*

"The illustrations are admirable; we have rarely seen figures on wood so exquisitely drawn and engraved or so carefully printed. Take it all in all, it is a work of rare merit, and will be of enduring utility; it does infinite credit to all concerned in its production."—*Field.*

"Nothing can be more complete than the account of the scientific results of these voyages, which are fully illustrated by woodcuts of the strange forms of life brought from the dark depths of the ocean, by charts of soundings, and elaborate tables of the deep-sea temperature. The book is another admirable example of that mingling of literary interest with scientific completeness and value which is the only true form of what is called in lumbering but expressive phrase, 'the popularisation of science."—*Daily News.*

MACMILLAN & CO., LONDON.

SCOTTISH PROVIDENT INSTITUTION,

EDINBURGH: 6, St. Andrew Square. LONDON: 18, King William Street, E.C.

ITS ADVANTAGES over other offices are:—

A larger immediate assurance for the same premium, with the prospect to good lives of eventually receiving very considerable additions.

Thus £1,200 or £1,250 may be secured at once for the premium usually charged for £1,000 only; and policies originally for, say, £1,000, have been increased to £1,400, £1,600, or even to £1,800.

FINANCIAL POSITION.

The Fund, accumulated entirely from the premiums, exceeds £2,250,000. Notwithstanding its low rates, no Office of the same age (Established 1837) has so large a Fund, or shows so large an increase from year to year.

On May 1st, Part I., super royal 8vo., price 3s., of a Third Issue of

BRITISH WILD FLOWERS. Illustrated

by J. E. SOWERBY, with short descriptions and references.

This work will be completed in 22 monthly parts. Each part will contain coloured Illustrations of 80 wild flowers on 4 plates.

The volume is a condensed edition of the "Standard English Botany" of Sowerby and Sir James Edward Smith, and contains a coloured illustration of every British plant.

JOHN VAN VOORST, 1, Paternoster Row

8vo. cloth, 474 pp., illustrated by 160 Woodcuts, £1 6s.

A HISTORY of BRITISH QUADRUPEDS,

including the Cetacea. By THOMAS BELL, F.R.S. &c. Second Edition, revised and partly re-written by the Author, assisted by R. F. Tomes and E. R. Alston.

"The work as a whole contains a fund of interesting information with which every English gentleman, whether living in town or country, should be familiar. We need scarcely add that the drawings, as in all Mr. Van Voorst's publications, are exquisitely done, and add greatly to the value of the work."—*Academy*, April 4, 1874.

JOHN VAN VOORST, 1, Paternoster Row.

In 8vo, with 12 Plates, price 21s. cloth.

THE OCEAN: its Tides and Currents and their Causes.

By WILLIAM LEIGHTON JORDAN, F.R.G.S.

"A very valuable addition to the list of works advancing our cosmical knowledge."—*Scientific Review*.

"The author of this book gives us a new Principia. Still, the book is the production of a man thoroughly well up in his own subject, and many others collateral with it. It is one that may be safely commended to the study of all who are interested in the subject of ocean currents."—*Iron*.

"Here we have the vulnerable point of Dr. Carpenter's modified resuscitation of the old theory of oceanic circulation clearly indicated, and a home-thrust of clear, sound reasoning fairly delivered through it. As this point is the very heart of Dr. Carpenter's contribution to the subject, the thrust is fatal. It is followed by further and equally clear and able discussion of the details of Dr. Carpenter's arguments, and of the theories of Maury, Rennell, Herschel, &c. This Chapter XX of Mr. Jordan's book is really excellent, and worthy of careful reading."—*Quarterly Journal of Science*.

The reports received from H.M.S. *Challenger* are confirming the views expressed in this work with a distinctness exceeding the most sanguine anticipations of the Author.

London: LONGMANS, GREEN, & CO., Paternoster Row.

NEW WORK BY RICHARD A. PROCTOR, B.A.

Just published, in 8vo, illustrated by 22 Lithographic Charts (4 coloured) and 22 Woodcut Diagrams, price 16s.

THE UNIVERSE AND THE COMING TRANSITS:

Presenting Researches into and New Views respecting the Constitution of the Heavens, together with an Investigation of the Conditions of the approaching Transits of Venus. (Recently confirmed by a unanimous vote of the chief Astronomers of Great Britain.) By RICHARD A. PROCTOR, B.A., Honorary Fellow of King's College, London.

"One of the most exhaustive of modern astronomical treatises."—*Standard*.

"We heartily commend this book to the attention of our readers; its style is plain, but its matter and substance will gratify their utmost expectations of the grand and the sublime."—*Edinburgh Courant*.

London: LONGMANS, GREEN, & CO., Paternoster Row.

Published by Georg Reimer, Berlin.

UNTERSUCHUNGEN uber die VEGETATIONSFORMEN von COCCOBACTERIA SEPTICA

und den Antheil, welchen sie an der Entstehung und Verbreitung der accidentellen Wundkrankheiten haben. Versuch einer wissenschaftlichen Kritik der verschiedenen Methoden antiseptischer Wundbehandlung. Von Dr. THEODOR BILLROTH, Professor der Chirurgie in Wien. 258 pp. and 5 plates, royal 4to. boards, 48s.

PHEASANTS FOR COVERTS AND AVIARIES,

their Natural History and Practical Management. By W. B. TEGETMEIER, F.Z.S. Illustrated with numerous Full-page Engravings by T. W. Wood.

"One of the handsomest and most useful sporting-books published."—*Baily's Magazine*.

"Nothing can be more interesting than the descriptions."—*Athenæum*.

"Mr. Tegetmeier has conveyed an amount of information which is truly surprising."—*Lancet*.

"Replete with practical detail."—NATURE.

"No one will regret that Mr. Tegetmeier's skill has been directed into this channel."—*Saturday Review*.

"We have not only all the scientific knowledge we possess of the pheasant, but every needful detail of instructions how to breed and rear it."—*Standard*.

London: *Field* Office, 346, Strand, W.C.

Now ready, with illustrations, crown 8vo, 12s.

RECORDS OF THE ROCKS; or, Notes

on the Geology, Natural History, and Antiquities of North and South Wales, Devon, and Cornwall. By Rev. W. S. SYMONDS, F.G.S., Rector of Pendock.

"We are sure that Mr. Symonds' book, while it will serve as a very useful itinerary for geologists on their rambles, will be still more welcome to the more discursive naturalist, and to the ordinary tourist, on account of the variety of fields over which it conducts him.

"A tourist who has been fortunate enough to put this book in his portmanteau when exploring the districts of which it treats, will certainly be at no loss for interesting and valuable local information of every kind."—*Saturday Review*.

"That which distinguishes the 'Records of the Rocks' from the crowd of geological books which bear a superficial resemblance to it, is that it is the record of the personal experiences of an amateur who has laboured in his favourite pursuit for many years with a diligence and conscientiousness seldom to be met with out of the line of professional study."—*Guardian*.

"An excellent work. The author is an amateur of unusual earnestness, experience, and attainments, and his book is one which those unversed in geology and natural history may read with pleasure and profit. Visitors in the counties of which the author treats will enjoy their vacation all the more with this volume."—*Daily News*.

TISLEY AND SPILLER,

OPTICIANS, &c.,

172, BROMPTON ROAD, S.W.

(Three minutes' walk from South Kensington Museum).

JUDSON'S DYES.—18 Colours, 6d. each.

RIBBONS, WOOL, SILK, FEATHERS,

Completely dyed in 10 minutes without soiling the hands.

Full Instructions supplied Of all Chemists and Stationers.

JUDSON'S DYES.—Dyeing at Home.—JUDSON'S simple DYES are most useful and effectual. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c

JUDSON'S DYES.—Photographic Paper Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES Beautiful effects are thus produced in green, pink, brown, and many other colours—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES.—Ferns, Grasses, Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c, by simply dipping them in a solution of JUDSON'S DYES Charming Bouquet may be thus composed.

JUDSON'S DYES.—Ink—Ink—Ink.—A Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water

JUDSON'S DYES.—For Colouring Architectural Plans, &c.—Much trouble may be saved in grinding up colours to a uniform tint. They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades

JUDSON'S DYES.—For Staining Wood.—Diluted with Water They sink deeply into the fibre, and will not rub off. They form the most economical stain on record. Light Brown for mahogany colour is excellent, No 2 Black for walnut, Canary for satin, also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE

Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

TO SECRETARIES OF SCIENTIFIC AND LITERARY SOCIETIES.

It having been suggested that the publication of a weekly Diary in NATURE of the Meetings, &c. *of the various provincial* Scientific and Literary Societies *would be found very useful, not only to the Members of such Societies, but to all who are interested in scientific and literary subjects, the Publishers have determined to devote a portion of their Advertisement columns to this purpose, and to insert* NOTICES OF MEETINGS, SUBJECTS OF LECTURES, *&c., at the nominal charge of* One Shilling *for each insertion.*

The Publishers of NATURE *will be glad if the Secretaries of Societies will aid them in their endeavours to make this weekly Diary as complete and useful as possible. Notices intended for insertion therein must be sent, addressed to the* Publishers, *by* Wednesday Mornings.

OFFICE—29, BEDFORD STREET, STRAND.

THE

JOURNAL OF APPLIED CHEMISTRY,

A MONTHLY PUBLICATION OF 16 PAGES QUARTO,

Devoted to Chemistry as applied to Arts and Manufactures, Agriculture Metallurgy, &c. &c.

At Two Dollars and Twenty-five Cents per annum, or One Dollar and Seventy-five Cents paid strictly in advance, including postage to United Kingdom.

Each number contains Original Articles on General Chemistry applied to Arts and Manufactures; Matter on Particular Fabrications, as Petroleum, Soaps, Tanning, Dyeing, and numerous others

A suitable space is also devoted to Practical Recipes and interesting Scientific Facts.

Full and carefully-prepared Market Reviews and Prices Current of Drugs and Chemicals of every description are given in each number for New York, Boston, and Philadelphia, with Tables of Imports.

EIGHTH VOLUME, commenced with January number.

DEXTER & CO, PUBLISHERS,
Spruce Street, New York; 48, Hanover Street, Boston; and 149, South 4th Street, Philadelphia, Pa., U S.A.

THE ENTOMOLOGIST'S MONTHLY MAGAZINE.

Price Sixpence, monthly, 24 pages 8vo., with occasional Illustrations.

Conducted by H. G KNAGGS, M.D. F.L.S., R. McLACHLAN, F.L.S., E. C. RYE, and H. T. STAINTON, F.R.S., &c.

This Magazine, commenced in 1864, contains standard articles and notes on all subjects connected with Entomology, and especially on the Insects of the British Isles.

Subscription—Six Shillings per Volume, post-free. The volumes commence with the June number in each year.

Vols. I. to V. (strongly bound in cloth) may be obtained by purchasers of the entire set to date, at the increased price of 10s. each; the succeeding vols. may be had separately or together at 7s. each.

London: JOHN VAN VOORST, 1, Paternoster Row.

N B.—Communications, &c., should be sent to the Editors at the above address.

"THE GARDEN,"

A Weekly Illustrated Journal devoted solely to Horticulture in all its Branches.

"THE GARDEN" is conducted by WILLIAM ROBINSON, F L.S, Author of "Hardy Flowers," "Alpine Flowers for English Gardens," "The Parks, Promenades, and Gardens of Paris," &c; and the best Writers in every Department of Gardening are contributors to its pages.

The following are some of the subjects regularly treated of in its pages —

The Flower Garden.
Landscape Gardening.
The Fruit Garden.
Garden Structures.
Room and Window Gardens.
Notes and Questions.
Market Gardening.

Edited by JOHN ALGERNON CLARKE, Secretary to the Central Chamber of Agriculture,

Devotes special attention to the discussions and proceedings of the Chambers of Agriculture of Great Britain (which now number upwards of 18,000 members), besides giving original papers on practical farming, and a mass of intelligence of particular value to the agriculturist.

The London Corn, Seed, Hop, Cattle, and other Markets of Monday are specially reported in this Journal, which is despatched the same evening so as to insure delivery to country subscribers by the first post on Tuesday morning. Price 3*d.*, or prepaid, 15*s.* a year post free.

Published by W. PICKERING, 21, Arundel Street, Strand, W.C.

THE ZOOLOGIST.

A MONTHLY JOURNAL OF NATURAL HISTORY.

Conducted by EDWARD NEWMAN, F.L.S. F.Z.S. &c.

The Zoologist was established in 1843 to record and preserve observations on subjects similar to those treated of in White's "Natural History of Selborne," and the success which has attended it is sufficient proof that its plan is acceptable to "out-of-door naturalists," those who delight in observing the manners, habits, the private lives, the migrations, movements, nests, young and food of animals It contains original papers and records of facts relating to Quadrupeds, Birds, Reptiles, Fishes, and Insects, together with notices of recent works on every branch of Natural History. The editor has been assisted by more than two hundred of our very best zoologists.

Published on the First of every Month.

PRICE ONE SHILLING.

London: JOHN VAN VOORST, 1, Paternoster Row.

NEWMAN'S ENTOMOLOGIST:

A MONTHLY ILLUSTRATED JOURNAL OF BRITISH INSECTS

Conducted by EDWARD NEWMAN, F.L.S. F.Z.S. &c.,

Late President of the Entomological Society.

The objects of the *Entomologist* are to give every information about Insects; more especially to work out the history of those which attack Fruit and Forest Trees, Vegetables, Root and Seed Crops, Greenhouse and Garden Plants, with a view to suggesting remedies. Notes, Observations, and Queries on every branch of the Science are solicited. To preserve a continuous record of the occurrence of rarities. To improve collections by offering a ready medium for the exchange of specimens.

Published on the First of every Month.

PRICE SIXPENCE.

SIMPKIN, MARSHALL, and Co, Stationers' Hall Court.

On the 1st of every Month, pp. 32, 8vo, with at least One Plate,

THE JOURNAL OF BOTANY,

BRITISH AND FOREIGN,

Edited by HENRY TRIMEN, M.B, F.L.S, British Museum, assisted by J. G. BAKER, F.L.S., Royal Herbarium, Kew.

Subscriptions for 1874 (12*s.* post free in the United Kingdom) payable in advance to the publishers, Messrs. Ranken and Co., Drury House, St. Mary-le-Strand, London, W.C., of whom may be obtained the volume for 1873 (price 16*s.* 6*d.* bound in cloth): also covers for the volume (price 1*s.*), and back numbers.

AGRICULTURAL PUBLICATIONS.

THE PROPORTIONATE FATTENING and Flesh-forming Qualities of nearly all the Feeding Substances in general use by Farmers: also the Manurial Value of the Residue from each article.

Opinions of the Press.

"It is clearly a very useful indicator of the values of the foods for cattle. —*Athenæum.*

"The chart cannot fail to be very useful to the keepers of horses and meat stock, and it will be an 'eye-opener' to many who will perceive how it is they have been so often disappointed after giving large prices for fancy foods."—*Sporting Times.*

"A very useful table The system is a very capital one, and we recommend our agricultural friends to invest a shilling, and procure one of the tables published by the Agricultural and Horticultural Association."—*Land and Water.*

PROFESSOR OF NATURAL PHILOSOPHY IN THE UNIVERSITY OF EDINBURGH;

AND

A. ADAMS-REILLY, F.R.G.S.

With Portraits, Maps, and Illustrations.

"It has seldom been our good fortune to peruse a biography so entirely satisfactory as that contained in the present volume. There were a wonderful simplicity and unity in the character and career of Principal Forbes, and in this delightful memoir the living man is so faithfully represented, that those who had only known him as the indefatigable physicist, the demonstrator, if not the actual discoverer of the phenomena of glacier structure and motion, or those whom his career never reached, will here find themselves introduced to a personal acquaintance; while his many friends and loyal students will gratefully acknowledge that Prof. Shairp and his able coadjutors have done their work wisely and well. At once a graceful literary monument to the memory of a good man, and an exhaustive scientific manual on the special subjects to which Forbes's life was consecrated."—*Spectator.*

MACMILLAN AND CO., London.

HOLLOWAY'S PILLS.—During spring, before entering on the relaxing heat of summer, it is a wise and wholesome precaution to purify and cool the system by some alterative competent to regulate disordered actions, and to strengthen while it cleanses. This long-sought medicine exists in Holloway's far-famed, purifying, and tonic Pills, which cost only a trifle, and will ward off serious illness, which too frequently reduces competency to poverty, and enjoyment to misery. This medicine, both innocent in its nature and searching in its operation, is suitable for all ages and both sexes. It is especially adapted for soldiers and sailors, and is an indispensable requisite for colonists and persons proceeding to foreign countries, where climates harass the constitution

It writes almost instantly Full Black.
Does not corrode Steel Pens.
Is cleanly to use, and not liable to Blot.
Flows easily from the Pen
Blotting-paper may be applied at the moment of writing.

TO BE HAD OF ALL STATIONERS.

JUDSON'S DYES.—18 Colours, 6d. each.

RIBBONS, WOOL, SILK, FEATHERS,

Completely dyed in 10 minutes without soiling the hands.

Full Instructions supplied Of all Chemists and Stationers

JUDSON'S DYES.—Dyeing at Home.—
JUDSON'S simple DYES are most useful and effectual Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper
Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES Beautiful effects are thus produced in green, pink, brown, and many other colours—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES. — Ferns, Grasses,
Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c., by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed.

JUDSON'S DYES.—Ink—Ink—Ink.—A
Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water

JUDSON'S DYES.—For Colouring Architectural Plans, &c —Much trouble may be saved in grinding up colours to a uniform tint. They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades

JUDSON'S DYES.—For Staining Wood.—
Diluted with Water They sink deeply into the fibre, and will not rub off. They form the most economical stain on record. Light Brown for mahogany colour is excellent, No. 2 Black for walnut, Canary for satin, also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE

Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

HOLLOWAY'S OINTMENT and PILLS.
—Self Help —In sickness it was a momentous matter to find an easy, ready, and reliable remedy for outward disfigurations and inward disorders until these inestimable preparations were made known. No invalid need now be at a loss in successfully managing ulcers, sores, tumours, boils, bruises, sprains, &c. Enveloping Holloway's medicines are very intelligible printed directions for using them, which should be attentively studied and immediately followed by all who resort to His treatment Sooner or later the sufferer will assuredly triumph over the worst diseases. This searching Ointment disperses all those malignant humours which aggravate diseases of the skin, prevent the cicatrization of ulcers, and ever kindle inflammatory tendencies in the system.

THE ONLY CHEAP FARMERS' NEWSPAPER.

THE CHAMBER OF
AGRICULTURE JOURNAL
AND FARMERS' CHRONICLE,

Edited by JOHN ALGERNON CLARKE, Secretary to the Central Chamber of Agriculture,

Devotes special attention to the discussions and proceedings of the Chambers of Agriculture of Great Britain (which now number upwards of 18,000 members), besides giving original papers on practical farming, and a mass of intelligence of particular value to the agriculturist.

THE ZOOLOGIST.

A MONTHLY JOURNAL OF NATURAL HISTORY.

Conducted by EDWARD NEWMAN, F.L.S. F Z S. &c.

The Zoologist was established in 1843 to record and preserve observations on subjects similar to those treated of in White's "Natural History of Selborne," and the success which has attended it is sufficient proof that its plan is acceptable to "out-of-door naturalists;" those who delight in observing the manners, habits, the private lives, the migrations, movements, nests, young and food of animals It contains original papers and records of facts relating to Quadrupeds, Birds, Reptiles, Fishes, and Insects, together with notices of recent works on every branch of Natural History The editor has been assisted by more than two hundred of our very best zoologists

Published on the First of every Month.

PRICE ONE SHILLING.

London: JOHN VAN VOORST, 1, Paternoster Row.

THE ENTOMOLOGIST'S MONTHLY MAGAZINE.

Price Sixpence, monthly, 24 pages 8vo., with occasional Illustrations.

Conducted by H. G KNAGGS, M.D. F.L.S, R. MCLACHLAN, F.L S, E. C. RYE, and H. T. STAINTON, F.R.S, &c

This Magazine, commenced in 1864, contains standard articles and notes on all subjects connected with Entomology, and especially on the Insects of the British Isles.
Subscription—Six Shillings per Volume, post-free. The volumes commence with the June number in each year.
Vols I to V. (strongly bound in cloth) may be obtained by purchasers of the entire set to date, at the increased price of 10*s*. each, the succeeding vols. may be had separately or together at 7*s*. each.

London: JOHN VAN VOORST, 1, Paternoster Row.

N.B —Communications, &c., should be sent to the Editors at the above address.

SCOTTISH PROVIDENT INSTITUTION,

EDINBURGH: 6, St. Andrew Square, LONDON: 18, King William Street, E.C.

ITS ADVANTAGES over other offices are:—

A larger immediate assurance for the same premium, with the prospect to good lives of eventually receiving very considerable additions.

Thus £1,200 or £1,250 may be secured at once for the premium usually charged for £1,000 only; and policies originally for, say, £1,000, have been increased to £1,400, £1,600, or even to £1,800.

FINANCIAL POSITION.

The Fund, accumulated entirely from the premiums, exceeds £2,250,000. Notwithstanding its low rates, no Office of the same age (Established 1837) has so large a Fund, or shows so large an increase from year to year.

PERUVIAN GOVERNMENT GUANO,

MESSRS. J. HENRY SCHRODER & CO.,

TO SECRETARIES OF SCIENTIFIC AND LITERARY SOCIETIES.

It having been suggested that the publication of a weekly Diary in NATURE of the Meetings, &c. *of the various provincial* Scientific and Literary Societies *would be found very useful, not only to the Members of such Societies, but to all who are interested in scientific and literary subjects, the Publishers have determined to devote a portion of their Advertisement columns to this purpose, and to insert* NOTICES OF MEETINGS, SUBJECTS OF LECTURES, *&c., at the nominal charge of* One Shilling *for each insertion.*

The Publishers of NATURE *will be glad if the Secretaries of Societies will aid them in their endeavours to make this weekly Diary as complete and useful as possible. Notices intended for insertion therein must be sent, addressed to the* Publishers, *by* Wednesday Mornings.

THE OCEAN : its Tides and Currents and their Causes. By WILLIAM LEIGHTON JORDAN, F.R G S.

"A very valuable addition to the list of works advancing our cosmical knowledge."—*Scientific Review*.

"The author of this book gives us a new Principia. Still, the book is the production of a man thoroughly well up in his own subject, and many others collateral with it. It is one that may be safely commended to the study of all who are interested in the subject of ocean currents."—*Iron*

"Here we have the vulnerable point of Dr. Carpenter's modified resuscitation of the old theory of oceanic circulation clearly indicated, and a home-thrust of clear, sound reasoning fairly delivered through it As this point is the very heart of Dr Carpenter's contribution to the subject, the thrust is fatal. It is followed by further and equally clear and able discussion of the details of Dr Carpenter's arguments, and of the theories of Maury, Rennell, Herschel, &c This Chapter XX. of Mr Jordan's book is really excellent, and worthy of careful reading"—*Quarterly Journal of Science.*

The reports received from H M S *Challenger* are confirming the views expressed in this work with a distinctness exceeding the most sanguine anticipations of the Author.

London : LONGMANS, GREEN, & CO , Paternoster Row.

Now ready,

AN ELEMENTARY TREATISE ON STEAM. By JOHN PERRY, B E , Whitworth Scholar, F.C S., late Lecturer on Physics at Clifton College. 4*s* 6*d*

When boys have acquired an elementary knowledge of Experimental Mechanics and Heat it is well to teach them the application of the principles they have learnt, by some such course as is sketched in the present work, before proceeding to Electricity, Acoustics, and Light The numerous examples and exercises will prove useful in all Physics classes ; whether the whole course is followed or not ; to candidates for scholarships at the Universities and to boys preparing for the examinations at Woolwich and Cooper's Hill

BERNARD QUARITCH, 15, Piccadilly, London

Just ready, Cheap Edition, 18mo, 1*s*.

The CHILDHOOD of the WORLD : a Simple Account of Man in Early Times. By EDWARD CLODD, F.R.A.S.

"This genial little volume is a child's book as to shortness, cheapness, and simplicity of style, though the author reasonably hopes that older people will use it as a source of information not popularly accessible elsewhere as to the life of Primitive Man and its relation to our own . . This book, if the time has come for the public to take to it, will have a certain effect in the world It is not a mere compilation from the authors mentioned in the preface, but takes its own ground and stands by itself and for itself. Mr. Clodd has thought out his philosophy of life, and used his best skill to bring it into the range of a child's view"—E. B. TYLOR, F R S, in NATURE.

"I read your little book with great pleasure. I have no doubt it will do good, and hope you will continue your work. Nothing spoils our temper so much as having to unlearn in youth, manhood, and even old age, so many things which we were taught as children. A book like yours will prepare a far better soil in the child's mind, and I was delighted to have it to read to my children."—Letter from Professor MAX MULLER to the Author

Now ready, price One Shilling.

London: MACMILLAN AND CO.

CADBURY'S COCOA ESSENCE.

CADBURY'S COCOA ESSENCE (Registered) is now taken by thousands as a light and invigorating beverage, who could not before take prepared Cocoa owing to its being too thick and heavy.

It consists solely of fine Cocoa Nibs, with the EXCESS of fatty matter extracted, and is consequently three times the strength of the "prepared" Cocoas so largely advertised, which often disagree with dyspeptic and delicate constitutions.

"Those who wish for Pure Cocoa in a convenient form should obtain the Cocoa Essence."—NATURE, Oct. 20, 1870.

"Cocoa treated thus will, we expect, prove to be one of the most nutritious, digestible, and restorative of drinks."—British Medical Journal, July 27, 1860.

CADBURY'S MEXICAN CHOCOLATE (IN BLUE WRAPPER) is guaranteed to consist solely of the finest Cocoa and Sugar, slightly flavoured with Vanilla. Great care has been taken in its preparation, so that it may be depended upon as the best Chocolate, used either as a confection or as a beverage.

OBSERVE.—*When Cocoa thickens in the cup it proves the addition of Starch.*

MAKERS, by Special Appointment, TO THE QUEEN.

Observe that "Cadbury's Cocoa Essence (Registered)" is on each Packet, as inferior descriptions are sometimes substituted

Printed by R. CLAY, SONS, & TAYLOR, at 7 and 8, Bread Street Hill, in the City of London, and published by MACMILLAN & CO. at the Office, 29 and 30, Bedford Street, Covent Garden.—THURSDAY, May 14, 1874.

FREDERICK CURREY, Secretary.

PRELIMINARY EXAM. IN ARTS, COLL. SURG., June 1874.

MR. HANBURY, M.A., Wrangler and late Senior Scholar of his College, will shortly begin to read with Classes for this Examination. Mr. Hanbury is assisted by efficient Lecturers in French, Chemistry, and Classics, and has passed several Pupils for this Examination, to whom references are allowed. An early Class will commence towards the latter part of February, and a later one about Lady Day. Fee for the Course, from 7 to 12 guineas, according to the time of commencement and number of subjects taken up.—Address, 24 Old Square, Lincoln's Inn, W.C.

MATRICULATION EXAMINATION, LOND. UNIV., June 1874.

MR. HANBURY, M.A., Wrangler and late Senior Scholar of his College, reads with Pupils for this Examination. Mr. Hanbury is assisted by efficient Lecturers in French, Chemistry, and Classics, and has been particularly successful for this Examination, having passed fifty-three Pupils, to whom references can be given. An early class about Lady-day, and a later one will commence the middle of February. Fees for the two, 14l. and 10l. 10s. respectively. For further particulars, address to 24, Old Square, Lincoln's-inn, W.C. Two of Mr. Hanbury's pupils passed the Matriculation Examination in January 1873, in the Honours list, seventh and fourteenth respectively.

A few Residents can be accommodated in Mr. Hanbury's house, at Clapham.

SCIENTIFIC BOOKS.—A few copies can still be had of Sowerby's Mineral Conchology, British and Exotic Mineralogy, English Fungi, British Miscellany, Zoological Journal, Genera of Shells, Species Concholorum, Tankerville Cat., &c., &c., as well as a large stock of second-hand books on Geology, Conchology, Entomology, &c. &c. SOWERBY, 167A, Strand.

ROYAL COUNCIL OF EDUCATION.—The Laboratory and Class-rooms of Berners College are open for Pupils EVERY DAY and EVENING. The subjects of the above Examinations can be studied either Privately or in Classes. Fees moderate. Analyses and investigations conducted.—Apply to Prof. E. V. GARDNER, F.E.S., F.S.A., 44, Berners Street, W.

REQUIRED, a MATHEMATICAL and NATURAL SCIENCE MASTERSHIP in a good School, by a CAMBRIDGE HONOUR-MAN.—Address—Alpha, care of the Publishers of NATURE, 29, Bedford Street, Strand, W.C.

To ASTRONOMERS and OTHERS.—A skillful Photographer, who is a Chemist and Amateur Astronomer, and possesses also some Literary Ability, wishes for an ENGAGEMENT in which these qualifications would be of service.—D.W., Doctor's Cottages, South Shore, Blackpool.

NATURAL SCIENCE MASTERSHIP WANTED after July 31 next by a Graduate of Cambridge, in a first-rate Grammar School. The highest testimonials.—Address, M. A., care of NATURE, 29, Bedford Street, Covent Garden, London, W.C.

NATURAL SCIENCE.—An Associate of Royal School of Mines, Whitworth Scholar, and Forbes' Medallist, is open to an Appointment in Chemistry, Physics, or Biology.—Address, A.R.S.M., Publisher of NATURE, 29, Bedford Street, Strand, W.C.

A YOUNG LADY seeks a RE-ENGAGEMENT as GOVERNESS in London. She is capable of teaching the rudiments of NATURAL SCIENCE, and has a thorough knowledge of French, German, and the usual branches of a sound English Education. —Address, Miss K., NATURE Office, 29, Bedford Street, Strand, W.C.

WANTED to PURCHASE, a CLASSIFIED COLLECTION of BRITISH BIRDS' EGGS. Must all be well authenticated.—Apply, stating terms, to E. E. B., care of Messrs. MACMILLAN and Co., Bedford Street, Strand, W.C.

COOKE'S EQUATORIAL REFRACTOR. Wanted, a 4½ or 5 in. Equatorial Refractor of excellent definition, by Cooke. One made by the *late* Mr. Cooke preferred.—Address, stating price, powers, and all other particulars, X.Y.Z., care of Mr. Hodges, Commerce Court, Sord Street, Liverpool.

FOR SALE.

AN AMATEUR'S COLLECTION of FOSSILS (stratigraphically arranged) Precious Stones, Agates, Sea, Land, and Freshwater Shells. Suitable for a student of Primeval and Progressive Natural History. For particulars apply to X Y Z., care of the Publisher of NATURE, 29, Bedford Street, Strand, W.C.

"THE GARDEN,"

A Weekly Illustrated Journal devoted solely to Horticulture in all its Branches.

"THE GARDEN" is conducted by WILLIAM ROBINSON, F.L.S., Author of "Hardy Flowers," "Alpine Flowers for English Gardens," "The Parks, Promenades, and Gardens of Paris," &c., and the best Writers in every Department of Gardening are contributors to its pages.

The following are some of the subjects regularly treated of in its pages:—

The Flower Garden
Landscape Gardening
The Fruit Garden
Garden Structures
Room and Window Gardens.
Notes and Questions.
Market Gardening.
Trees and Shrubs
Hardy Flowers
Town Gardens.
The Conservatory.
Public Gardens.
The Greenhouse and Stove.
The Household
The Wild Garden.
The Kitchen Garden

"THE GARDEN" may be obtained through all Newsagents and at the Railway Bookstalls, at 4*d.* per Copy. It may also be had direct from the Office at 5*s.* for a Quarter, 9*s.* 9*d.* for a Half-year, and 10*s.* 6*d.* for a Year, payable in advance, and in Monthly Parts. Specimen Copies (post-free), 4½*d.*

37, Southampton Street, Covent Garden, S.W.

THE ZOOLOGIST.

A MONTHLY JOURNAL OF NATURAL HISTORY.

Conducted by EDWARD NEWMAN, F.L.S., F.Z.S. &c.

The Zoologist was established in 1843 to record and preserve observations on subjects similar to those treated of in White's "Natural History of Selborne," and the success which has attended it is sufficient proof that its plan is acceptable to "out-of-door naturalists," those who delight in observing the manners, habits, the private lives, the migrations, movements, nests, young and food of animals. It contains original papers and records of facts relating to Quadrupeds, Birds, Reptiles, Fishes, and Insects, together with notices of recent works on every branch of Natural History. The editor has been assisted by more than two hundred of our very best zoologists.

Published on the First of every Month.

PRICE ONE SHILLING.

London: JOHN VAN VOORST, 1, Paternoster Row.

Now ready, price 20*s.*

JOURNAL OF THE ROYAL GEOGRAPHICAL SOCIETY.

Vol. XLIII.

Edited by H. W. BATES, F.L.S., Assistant-Secretary.

CONTENTS.

1. On the Garo Hills. By Major H. H. Godwin-Austen, R.E.
2. On a Projected Railway Route over the Andes. By R. Crawford, C.E. (Map.)
3. Journey from Kiôto to Yedo. By C. W. Lawrence. (Map.)

HOLLOWAY'S OINTMENT and PILLS.—Rheumatism and rheumatic gout are the most dreaded of all diseases, because their victims know that they are safe at no season, and at no age secure. Holloway's Ointment, after fomentation of the painful parts, gives greater relief than any other application, but it must be diligently used to obtain this desirable result. It has been highly commended by rheumatic subjects of all ages and of both sexes for rendering their attacks less frequent and less rigorous, and for repressing the sour perspirations and soothing the nerves. In many cases Holloway's Ointment and Pills have proved the greatest blessings in removing rheumatism and rheumatic gout which had assailed persons previously healthy and in the prime of life.

Now ready,

NEGRETTI & ZAMBRA'S

NEW ENCYCLOPÆDIC CATALOGUE

Of Optical, Mathematical, Nautical, Electrical, Galvanic, Magnetic, Pneumatic, Hydraulic, Hydrostatic, Photographic, and Standard

BRYANT & MAY'S MATCHES.

Second Edition, royal 8vo, cloth extra gilt, 31s. 6d.

The DEPTHS of the SEA: An Account of the General Results of the Dredging Cruises of H M SS. *Porcupine* and *Lightning* during the Summers of 1868-69-70, under the Scientific Direction of Dr. Carpenter, F.R.S., J. Gwyn Jeffries, F R.S , and Dr. Wyville Thomson, F.R.S. By C. WYVILLE THOMSON, F.R.S., &c., Director of the Civilian Scientific Staff of the *Challenger* Expedition. Illustrated by 8 Maps and Plates and nearly 100 Woodcuts.

"The book is full of interesting matter, and is written by a master of the art of popular exposition. It is excellently illustrated, both coloured maps and woodcuts possessing high merit. Those who have already become interested in the dredging operations will, of course, make a point of reading this work; those who wish to be pleasantly introduced to the subject, and rightly to appreciate the news which arrives from time to time from the *Challenger*, should not fail to seek instruction from Prof. Thomson."—*Athenæum.*

Second Edition, royal 8vo, cloth extra, 31s. 6d.

The FORCES of NATURE: a Popular Introduction to the Study of Physical Phenomena. By AMEDEE GUILLEMIN. Translated from the French by MRS. NORMAN LOCKYER, and Edited, with Additions and Notes, by J. NORMAN LOCKYER, F.R.S. Illustrated by 11 Coloured Plates and 455 Woodcuts.

"Translator and editor have done justice to their trust. The text has all the force and flow of original writing, combining faithfulness to the author's meaning with purity and independence in regard to idiom, while the technical precision and accuracy pervading the work throughout speak of the watchful editorial supervision which has been given to every scientific detail. Altogether, the work may be said to have no parallel, either in point of fulness or attraction, as a popular manual of physical science."—*Saturday Review.*

Third Edition, royal 8vo, cloth extra, 21s.

SPECTRUM ANALYSIS. By Professor ROSCOE, F.R.S. With Appendices, Engravings, Maps, and Chromolithographs.

"The Illustrations—no unimportant part of a book on such a subject—are marvels of wood-printing, and reflect the clearness which is the distinguishing merit of Mr. Roscoe's explanations."—*Saturday Review.*

"The lectures themselves furnish a most admirable elementary [illegible] on the subject, whilst by the insertion in [illegible] of extracts from the most important [illegible] dered it equally valuable as a [illegible] *ster Review.*

CALIBA[illegible]

DAN[illegible]

tur[illegible]

SCOTTISH PROVIDENT INSTITUTION,

EDINBURGH: 6, St. Andrew Square. LONDON: 18, King William Street, E.C.

ITS ADVANTAGES over other offices are:—

A larger immediate assurance for the same premium, with the prospect to good lives of eventually receiving very considerable additions.

Thus £1,200 or £1,250 may be secured at once for the premium usually charged for £1,000 only; and policies originally for, say, £1,000, have been increased to £1,400, £1,600, or even to £1,800.

FINANCIAL POSITION.

The Fund, accumulated entirely from the premiums, exceeds £2,250,000. Notwithstanding its low rates, no Office of the same age (Established 1837) has so large a Fund, or shows so large an increase from year to year.

NOTICE.

There will be PUBLISHED, in '*NATURE* for JUNE 4, a NOTICE of the Eminent Naturalist,

CHARLES DARWIN, F.R.S.

By DR. ASA GRAY, With a PORTRAIT beautifully ENGRAVED ON STEEL, by CHARLES H. JEENS,

Forming the THIRD of the SERIES of ILLUSTRATED ARTICLES on

"SCIENTIFIC WORTHIES."

The Publishers would urge upon all regular Subscribers and Readers of NATURE to bring this Announcement under the notice of their Scientific Friends, and those who are Members of Scientific Societies, before their co-Members.

As the printing of the Portrait requires considerable time, it is requested that Orders for Extra Copies be given at the earliest possible moment.

Just ready, Cheap Edition, 18mo, 1s.

The CHILDHOOD of the WORLD: a Simple Account of Man in Early Times. By EDWARD CLODD, F.R.A.S.

"This genial little volume is a child's book as to shortness, cheapness, and simplicity of style, though the author reasonably hopes that older people will use it as a source of information not popularly accessible elsewhere as to the life of Primitive Man and its relation to our own. . . . This book, if the time has come for the public to take to it, will have a certain effect in the world. It is not a mere compilation from the authors mentioned in the preface, but takes its own ground and stands by itself and for itself. Mr. Clodd has thought out his philosophy of life, and used his best skill to bring it into the range of a child's view."—E. B. TYLOR, F.R.S., in NATURE.

"I read your little book with great pleasure. I have no doubt it will do good, and hope you will continue your work. Nothing spoils our temper so much as having to unlearn in youth, manhood, and even old age, so many things which we were taught as children. A book like yours will prepare a far better soil in the child's mind, and I was delighted to have it to read to my children."—Letter from Professor MAX MÜLLER to the Author.

MACMILLAN & CO., London.

Eighth Thousand, cloth, 21s., 70 Plates, 4 Coloured.

HOW TO WORK WITH THE MICROSCOPE. A complete Manual of Microscopical Manipulation. A full description of many new processes of investigation, taking photographs, &c.

DAVID HUME'S PHILOSOPHICAL WORKS.

On Saturday, the 23rd instant, in 2 vols. 8vo, price 28s.

A TREATISE on HUMAN NATURE, being an Attempt to Introduce the Experimental Method of Reasoning into Moral Subjects; and Dialogues concerning Natural Religion. By DAVID HUME. Edited, with Preliminary Dissertations and Notes, by T. H. GREEN, M.A., Fellow and Tutor, Ball. Coll. Oxford, and the Rev. T. H. GROSE, M.A. Fellow and Tutor, Queen's Coll. Oxford.

In the Autumn, in 2 vols. 8vo, uniform,

HUME'S ESSAYS, MORAL, POLITICAL, and LITERARY, with Notes, &c., by the same Editors.

⁂ These four volumes will form a New and Complete Edition of DAVID HUME'S "Philosophical Works," to be had in Two separate Sections, as above announced.

London: LONGMANS, GREEN, & CO., Paternoster Row.

Just published, in post 8vo cloth, price 5s.

DIVINE REVELATION or PSEUDO-SCIENCE? An Essay. By R. G. SUCKLING-BROWNE, B.D., Author of "The Mosaic Cosmogony, a Literal Translation of the First Chapter of Genesis, with Annotations and Rationale."

London: LONGMANS, GREEN, & CO., Paternoster Row.

Now ready, small demy 8vo, price 6s.

A TALE of AGES. Being a Description of some of the Geological and Historical Changes which have occurred in the Neighbourhood of Edinburgh. By RALPH RICHARDSON, Secretary Edinburgh Geological Society.

EDMONSTON & DOUGLAS, Edinburgh. HAMILTON, ADAMS, & CO., London.

In royal 8vo, cloth extra gilt, price 31s. 6d.

CONTRIBUTIONS to SOLAR PHYSICS. By J. NORMAN LOCKYER, F.R.S. I. A Popular Account of Inquiries into the Physical Constitution of the Sun, with especial reference to Recent Spectroscopic Researches. II. Communications to the Royal Society of London and the French Academy of Sciences, with Notes. Illustrated by 7 Coloured Lithographic Plates and 175 Woodcuts.

"The first part of the work, presenting the reader with a continuous sketch of the history of the various inquiries into the physical constitution of the sun, cannot fail to be of interest to all who care for the revelations of modern science; and the interest will be enhanced by the excellence of the numerous illustrations by which it is accompanied."—*Athenæum.*

"The book may be taken as an authentic exposition of the present state of science in connexion with the important subject of spectroscopic analysis . . . Even the unscientific public may derive much information from it."—*Daily News.*

JUDSON'S DYES.—18 Colours, 6d. each.

RIBBONS, WOOL, SILK, FEATHERS,

Completely dyed in 10 minutes without soiling the hands.

Full Instructions supplied. Of all Chemists and Stationers

JUDSON'S DYES.—Dyeing at Home.—JUDSON'S simple DYES are most useful and effectual. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES Beautiful effects are thus produced in green, pink, brown, and many other colours—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES.—Ferns, Grasses, Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c., by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed

JUDSON'S DYES.—Ink—Ink—Ink.—A Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water

JUDSON'S DYES.—For Colouring Architectural Plans, &c —Much trouble may be saved in grinding up colours to a uniform tint. They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades

JUDSON'S DYES.—For Staining Wood.—Diluted with Water. They sink deeply into the fibre, and will not rub off. They form the most economical stain on record *Light* Brown for mahogany colour is excellent; No. 2 Black for walnut, Canary for satin; also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE

Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS

TRADE MARK.

Is allowed by upwards of 500 Medical Men to be the most effective invention in the curative treatment of Hernia. The use of a steel spring, so often hurtful in its effects, is here avoided; a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, 2 inches below the hips, being sent to the manufacturer,

JOHN WHITE, 228, Piccadilly,

ELASTIC STOCKINGS, KNEE-CAPS, &c, for Varicose Veins and all cases of weakness and Swellings of the Legs, Sprains, &c. They are porous, light in texture, and inexpensive, and drawn on over an ordinary stocking. Price 4*s* 6*d.*, 7*s.* 6*d.*, 10*s.*, and 16*s.* each. Postage free.

JOHN WHITE, Manufacturer, 228, Piccadilly, London.

WORKS IN PHYSICAL SCIENCE.

Airy (G. B.)—POPULAR ASTRONOMY. With Illustrations by Sir G. B. AIRY, K.C.B., Astronomer-Royal. Seventh and cheaper edition. 18mo. cloth. 4*s.* 6*d.*

This work consists of Six Lectures, which are intended "to explain to intelligent persons the principles on which the instruments of an Observatory are constructed (omitting all details, so far as they are merely subsidiary), and the principles on which the observations made with these intruments are treated for deduction of the distances and weights of the bodies of the Solar System, and of a few stars, omitting all minutiæ of formulæ, and all troublesome details of calculation." The speciality of this volume is the direct reference of every step to the Observatory, and the full description of the methods and instruments of observation.

Bastian.—Works by H. CHARLTON BASTIAN, M.D., F.R.S., Professor of Pathological Anatomy in University College, London, &c. :—

THE MODES OF ORIGIN OF LOWEST ORGANISMS: Including a Discussion of the Experiments of M. Pasteur, and a Reply to some Statements by Professors Huxley and Tyndall. Crown 8vo. 4*s.* 6*d.*

"It is a work worthy of the highest respect, and places its author in the very first-class of scientific physicians. . . . It would be difficult to name an instance in which skill, knowledge, perseverance, and great reasoning power have been more happily applied to the investigation of a complex biological problem."—*British Medical Journal.*

THE BEGINNINGS OF LIFE: Being some Account of the Nature, Modes of Origin, and Transformations of Lower Organisms. In Two Volumes. With upwards of 100 Illustrations. Crown 8vo. 28*s.*

These volumes contain the results of several years' investigation on the Origin of Life, and it was only after the author had proceeded some length with his observations and experiments that he was compelled to change the opinions he started with for those announced in the present work—the most important of which is that in favour of "spontaneous generation"—the theory that life has never ceased to be actually originated. The first part of the work is intended to show the general reader, more especially, that the logical consequences of the now commonly accepted doctrines concerning the "Conservation of Energy," and the "Correlation of the Vital and Physical Forces" are wholly favourable to the possibility of the independent origin of "living matter." It also contains a view of the "Cellular Theory of Organisation." In the Second Part of the work, under the head "Archebiosis," the question as to the present occurrence or non-occurrence of "spontaneous generation" is fully considered. "He has made a notable contribution to the literature of scientific research and exposition."—*Daily News.* "It is a book that cannot be ignored, and must inevitably lead to renewed discussions and repeated observations, and through these to the establishment of truth."—A. R. WALLACE in NATURE.

Birks (T. R.) On MATTER and ETHER; or, the Secret Laws of Physical Change. By THOMAS RAWSON BIRKS, M.A., Professor of Moral Philosophy in the University of Cambridge. Crown 8vo. 5*s.* 6*d.*

The author believes that the hypothesis of the existence of, besides matter, a luminous ether, of immense elastic force, supplies the true and sufficient key to the remaining secrets of inorganic matter, of the phenomena of light, electricity, &c. In this treatise the author endeavours first to form a clear and definite conception with regard to the real nature both of matter and ether, and the laws of mutual action which must be supposed to exist between them. He then endeavours to trace out the main consequences of the fundamental hypothesis, and their correspondence with the known phenomena of physical change.

Blanford (W. T.)—GEOLOGY and ZOOLOGY of ABYSSINIA. By W. T. BLANFORD. 8vo. 21*s.*

This work contains an account of the Geological and Zoological Observations made by the author in Abyssinia, when accompanying the British Army on its march to Magdala and back in 1868, and during a short journey in Northern Abyssinia, after the departure of the troops. Part I. Personal Narrative; Part II. Geology; Part III. Zoology. With Coloured Illustrations and Geological Map. "The results of his labours," the *Academy* says, "is an important contribution to the natural history of the country."

Cooke (Josiah P., jun.)—FIRST PRINCIPLES of CHEMICAL PHILOSOPHY. By JOSIAH P. COOKE, jun., Ervine Professor of Chemistry and Mineralogy in Harvard College. Crown 8vo. 12*s.* Third Edition, revised and corrected.

The object of the author in this book is to present the philosophy of Chemistry in such a form that it can be made with profit the subject of College recitations, and furnish the teacher with the means of testing the student's faithfulness and ability. With this view the subject has been developed in a logical order, and the principles of the science are taught independently of the experimental evidence on which they rest.

Cooke (M. C.)—HANDBOOK of BRITISH FUNGI, with full descriptions of all the Species, and Illustrations of the Genera. By M. C. COOKE, M.A. Two vols. crown 8vo. 24*s.*

During the thirty-five years that have elapsed since the appearance of the last complete Mycologic Flora no attempt has been made to revise it, to incorporate species since discovered, and to bring it up to the standard of modern science. No apology, therefore, is necessary for the present effort, since all will admit that the want of such a manual has long been felt, and this work makes its appearance under the advantage that it seeks to occupy a place which has long been vacant. No effort has been spared to make the work worthy of confidence, and, by the publication of an occasional supplement, it is hoped to maintain it for many years as *the* "Handbook" for every student of British Fungi. Appended is a complete alphabetical Index of all the divisions and subdivisions of the Fungi noticed in the text. The book contains 400 figures. "Will maintain its place as the standard English book, on the subject of which it treats, for many years to come."—*Standard.*

Dawson (J. W.)—ACADIAN GEOLOGY. The Geologic Structure, Organic Remains, and Mineral Resources of Nova Scotia, New Brunswick, and Prince Edward Island. By JOHN WILLIAM DAWSON, M.A. LL.D., F.R.S., F.G.S., Principal and Vice-Chancellor of M'Gill College and University, Montreal, &c. Second Edition, revised and enlarged. With a Geological Map and numerous Illustrations. 8vo. 18*s.*

The object of the first edition of this work was to place within reach of the people of the districts to which it relates, a popular account of the more recent discoveries in the geology and mineral resources of their country, and at the same time to give to geologists in other countries a connected view of the structure of a very interesting portion of the American Continent, in its relation to general and theoretical Geology. In the present edition, it is hoped this design is still more completely fulfilled, with reference to the present more advanced condition of knowledge. The author has endeavoured to convey a knowledge of the structure and fossils of the region in such a manner as to be intelligible to ordinary readers, and has devoted much attention to all questions relating to the nature and present or prospective value of deposits of useful minerals. Besides a large coloured Geological Map of the district, the work is illustrated by upwards of 260 cuts of sections, fossils, animals, &c. "The book will doubtless find a place in the library, not only of the scientific geologist, but also of all who are desirous of the industrial progress and commercial prosperity of the Acadian provinces."—*Mining Journal.* "A style at once popular and scientific. . . . A valuable addition to our store of geological knowledge."—*Guardian.*

MACMILLAN AND CO., London.

This day, in 8vo, price 7*s.* 6*d.*

THEORY of the GLACIERS of SAVOY.

BY M. LE CHANOINE RENDU,

In 8vo, price 16*s.*

THE LIFE AND LETTERS OF JAMES DAVID FORBES, F.R.S.,

LATE PRINCIPAL OF THE UNITED COLLEGE IN THE UNIVERSITY OF ST. ANDREWS.

BY JOHN CAMPBELL SHAIRP, LL.D.

PRINCIPAL OF THE UNITED COLLEGE IN THE UNIVERSITY OF ST. ANDREWS;

PETER GUTHRIE TAIT, M.A.

PROFESSOR OF NATURAL PHILOSOPHY IN THE UNIVERSITY OF EDINBURGH;

AND

A. ADAMS-REILLY, F.R.G.S.

With Portraits, Maps, and Illustrations.

"It has seldom been our good fortune to peruse a biography so entirely satisfactory as that contained in the present volume. There were a wonderful simplicity and unity in the character and career of Principal Forbes, and in this delightful memoir the living man is so faithfully represented, that those who had only known him as the indefatigable physicist, the demonstrator, if not the actual discoverer of the phenomena of glacier structure and motion, or those whom his career never reached, will here find themselves introduced to a personal acquaintance; while his many friends and loyal students will gratefully acknowledge that Prof. Shairp and his able coadjutors have done their work wisely and well. At once a graceful literary monument to the memory of a good man, and an exhaustive scientific manual on the special subjects to which Forbes's life was consecrated."—*Spectator.*

VICHY WATERS COMPANY,

27, MARGARET STREET, REGENT STREET, LONDON, W.

DEPOT FOR ALL FOREIGN MINERAL WATERS, VICHY.

The use of the Natural Waters of Vichy is extending vastly. They are most efficacious in all complaints arising from acidity. They make the blood more alkaline and less coagulable, and promote its circulation. In the derangement of the digestive functions, and in all the chronical disorders of the abdominal organs, their good effects are shown. The Waters of Vichy are alkaline and gaseous, and although medicinal they are agreeable to the palate, from their slightly acid taste. Of all mineral waters they are the most exported.

Just Published. 8vo. Price 14*s*.

A MANUAL OF THE CHEMISTRY OF THE CARBON COMPOUNDS;

Mr. J. CAMERON SWAN, 1, Dean Street, Newcastle-on-Tyne.

DISSOLVED PERUVIAN GUANO,

PREPARED BY

OHLENDORFF & CO.

LONDON, ANTWERP, HAMBURGH, AND EMMERICH-ON-RHINE.

GUARANTEED TO CONTAIN

Nitrogen equal to 10 per cent. of non-volatile Ammonia.
20 " soluble } Guano Phosphates.
4 " insoluble } Guano Phosphates.
Price:—14*l*. per ton for 30 tons and upwards.
15*l*. " lots under 30 tons.

Delivered free at any of their depôts in the United Kingdom
AGAINST CASH.

This Manure is prepared from GENUINE PERUVIAN GOVERNMENT GUANO. The result of its special treatment is, that the ammonia is FIXED, the phosphates in the raw Guano rendered SOLUBLE and the Manure brought into the condition of a free dry powder.

It loses nothing from exposure to the atmosphere, or to the heat of the sun. It is offered to the Farmer with a Guarantee of its composition, and is, in fact, the richest, and, considering the quality, the cheapest GUARANTEED Manure at present in the market. Its fertilising properties are such as will enable the consumer to derive the greatest economical advantage from the use of Guano.

OHLENDORFF & CO.

OFFICES:—110, Fenchurch Street, London, E.C.
WORKS:—At Plaistow, near Victoria Docks.
DEPOTS:—In London, at the above Works, and at the principal Outports.

Printed by R. CLAY, SONS, & TAYLOR, at 7 and 8, Bread Street Hill, in the City of London, and published by MACMILLAN & Co. at the Office, 29 and 30, Bedford Street, Covent Garden.—THURSDAY, May 21, 1874.

UNIVERSITY OF LONDON.

NOTICE is Hereby Given, that the next Half-yearly Examination for MATRICULATION in this University will commence on MONDAY, the 29th of June, 1874. In addition to the Metropolitan Examination, Provincial Examinations will be held at St. Cuthbert's College, Ushaw , Stonyhurst College ; Owens College, Manchester , Queen's College, Liverpool and Queen's College, Birmingham.

Every Candidate is required to transmit his Certificate of Age to the Registrar (University of London, Burlington Gardens, London, W) at least fourteen days before the commencement of the Examination.

Candidates who pass the Matriculation Examination are entitled to proceed to the Degrees conferred by the University in Arts, Laws, Science, and Medicine. This Examination is accepted (1) by the Council of Military Education in lieu of the Entrance Examination otherwise imposed on Candidates for admission to the Royal Military College at Sandhurst , and (2) by the College of Surgeons in lieu of the Preliminary Examination otherwise imposed on Candidates for its Fellowship. It is also among those Examinations of which some one must be passed (1) by every Medical Student on commencing his professional studies ; and (2) by every person entering upon Articles of Clerkship to an Attorney—any such person matriculating in the First Division being entitled to exemption from one year's service.

WILLIAM B. CARPENTER, M D.

Registrar

May 26, 1874

PRELIMINARY EXAM. IN ARTS, COLL SURG., June 1874.

MR. HANBURY, M.A., Wrangler and late Senior Scholar of his College, will shortly begin to read with Classes for this Examination. Mr Hanbury is assisted by efficient Lecturers in French, Chemistry, and Classics, and has passed several Pupils for this Examination, to whom references are allowed. An early Class will commence towards the latter part of February, and a later one about Lady Day. Fee for the Course, from 7 to 12 guineas, according to the time of commencement and number of subjects taken up —Address, 24 Old Square, Lincoln's Inn, W.C.

MATRICULATION EXAMINATION, LOND. UNIV., June 1874

MR. HANBURY, M.A., Wrangler and late Senior Scholar of his College, reads with Pupils for this Examination Mr. Hanbury is assisted by efficient Lecturers in French, Chemistry, and Classics, and has been particularly successful for this Examination, having passed fifty-three Pupils, to whom references can be given. An early class about Lady-day, and a later one will commence the middle of February Fees for the two, 14l and 10l 10s respectively For further particulars, address to 24, Old Square, Lincoln's-inn, W C Two of Mr Hanbury's pupils passed the Matriculation Examination in January 1873, in the Honours list, seventh and fourteenth respectively

A few Residents can be accommodated in Mr. Hanbury's house, at Clapham.

ROYAL COUNCIL OF EDUCATION.—The Laboratory and Class-rooms of Berners College are open for Pupils EVERY DAY and EVENING. The subjects of the above Examinations can be studied either Privately or in Classes. Fees moderate. Analyses and Investigations conducted.—Apply to Prof. E. V. GARDNER, F.E.S., F.S.A., 44, Berners Street, W.

TO NATURALISTS and GEOLOGISTS. In the River Marshes near the picturesque ruin of Orford Castle, Suffolk, a lately made cutting in the Crag formation is bringing to light numerous Fossils, including some of the rarer species in a high state of preservation, and arrangements are now being made by means of a small Subscription from Naturalists who may wish to possess sets of these Fossils to secure as many of them as possible while the cutting is open. The collecting operation, and the labelling the Fossils will be done under the direction of Mr. Charlesworth, while details can be had by written application (with stamped envelope) to Fredc. Collingwood, Esq., F.G.S., 4, St. Martin's Place, Trafalgar Square, W.C.

NOTICE.—To Science Classes.—MOTTERSHEAD & CO., Laboratory Furnishers, Exchange Street, Manchester, supply all the Apparatus enumerated in the South Kensington Lists for the use of Teachers of Physical Science (Light, Heat, Electricity, Magnetism, &c.), and will be happy to show intending purchasers specimens of the various Instruments, or to forward Estimates on application. Orders exceeding £2 in value delivered free to any railway station in England.

NATURAL SCIENCE MASTERSHIP WANTED after July 31 next by a Graduate of Cambridge, in a first-rate Grammar School. The highest testimonials.—Address, M.A., care of NATURE, 29, Bedford Street, Covent Garden, London, W.C.

A YOUNG LADY seeks a RE-ENGAGEMENT as GOVERNESS in London. She is capable of teaching the rudiments of NATURAL SCIENCE, and has a thorough knowledge of French, German, and the usual branches of a sound English Education.—Address, Miss K., NATURE Office, 29, Bedford Street, Strand, W.C.

REQUIRED, a MATHEMATICAL and NATURAL SCIENCE MASTERSHIP in a good School, by a CAMBRIDGE HONOUR-MAN.—Address—Alpha, care of the Publishers of NATURE, 29, Bedford Street, Strand, W.C.

A D.Sc. (Lond.), Master in a Public School, proposing to spend some weeks in Germany, would undertake the charge of Pupils.—For Terms, &c., address D.Sc., NATURE Office.

To ASTRONOMERS and OTHERS.—A skilful Photographer, who is a Chemist and Amateur Astronomer, and possesses also some Literary Ability, wishes for an ENGAGEMENT in which these qualifications would be of service.—D.W., Doctor's Cottages, South Shore, Blackpool.

WANTED to PURCHASE, a CLASSIFIED COLLECTION of BRITISH BIRDS' EGGS. Must all be well authenticated.—Apply, stating terms, to E. E. B., care of Messrs. MACMILLAN and Co., Bedford Street, Strand, W.C.

FOR SALE.

AN AMATEUR'S COLLECTION of FOSSILS (stratigraphically arranged) Precious Stones, Agates, Sea, Land, and Freshwater Shells. Suitable for a student of Primeval and Progressive Natural History. For particulars apply to X.Y.Z., care of the Publisher of NATURE, 29, Bedford Street, Strand, W.C.

NATURE.—Wanted clean Copies of Nos. 10, 12, and 116. NATURE Office, 29, Bedford Street, Strand, W.C.

A LADY requires a RE-APPOINTMENT. German, French, the Elements of Natural Science, together with all the usual branches of Education. Highest References can be given.—Address, M.A.H., care of the Publishers of NATURE, 29, Bedford Street, Covent Garden, W.C.

JOHN MURRAY, Albemarle Street.

THE ONLY CHEAP FARMERS' NEWSPAPER.

THE CHAMBER OF AGRICULTURE JOURNAL

AND FARMERS' CHRONICLE,

Edited by JOHN ALGERNON CLARKE, Secretary to the Central Chamber of Agriculture,

Devotes special attention to the discussions and proceedings of the Chambers of Agriculture of Great Britain (which now number upwards of 18,000 members), besides giving original papers on practical farming, and a mass of intelligence of particular value to the agriculturist.

The London Corn, Seed, Hop, Cattle, and other Markets of Monday are specially reported in this Journal, which is despatched the same evening so as to insure delivery to country subscribers by the first post on Tuesday morning. Price 3d., or prepaid, 15s. a year post free.

Published by W. PICKERING, 21, Arundel Street, Strand, W.C.

HOLLOWAY'S OINTMENT and PILLS.

Hearty and Healthy.—The experience of thousands has amply demonstrated the power possessed by these healing and purifying remedies of removing cutaneous eruptions and relieving fistulas and abscesses These hidden evils frequently rob life of every comfort, through the reluctance of the sufferer to expose his infirmity Holloway's Ointment supersedes such dreadful publicity by placing within reach of all plain instructions for curing themselves, without any danger and without the necessity of mentioning their malady to any one. The most bashful need only send to any chemist for these remedies, read their "directions for use," set forth in clear, precise, pertinent language, and cure their own infirmities

"THE GARDEN,"

A Weekly Illustrated Journal devoted solely to Horticulture in all its Branches.

"THE GARDEN" is conducted by WILLIAM ROBINSON, F L.S, Author of "Hardy Flowers," "Alpine Flowers for English Gardens," "The Parks, Promenades, and Gardens of Paris," &c.; and the best Writers in every Department of Gardening are contributors to its pages.

The following are some of the subjects regularly treated of in its pages —

The Flower Garden.
Landscape Gardening.
The Fruit Garden.
Garden Structures.
Room and Window Gardens.
Notes and Questions.
Market Gardening.
Trees and Shrubs.
Hardy Flowers.
Town Gardens.
The Conservatory.
Public Gardens.
The Greenhouse and Stove.
The Household.
The Wild Garden
The Kitchen Garden.

"THE GARDEN" may be obtained through all Newsagents and at the Railway Bookstalls, at 4d. per Copy. It may also be had direct from the Office at 5s. for a Quarter, 9s. 9d. for a Half-year, and 19s. 6d for a Year, payable in advance, and in Monthly Parts. Specimen Copies (post-free), 4½d.

37, Southampton Street, Covent Garden, S.W.

NEWMAN'S ENTOMOLOGIST:

A MONTHLY ILLUSTRATED JOURNAL OF BRITISH INSECTS

Conducted by EDWARD NEWMAN, F.L.S. F.Z.S. &c.,

Late President of the Entomological Society.

The objects of the *Entomologist* are to give every information about Insects; more especially to work out the history of those which attack Fruit and Forest Trees, Vegetables, Root and Seed Crops, Greenhouse and Garden Plants, with a view to suggesting remedies. Notes, Observations, and Queries on every branch of the Science are solicited. To preserve a continuous record of the occurrence of rarities. To improve collections by offering a ready medium for the exchange of specimens.

Published on the First of every Month.

PRICE SIXPENCE.

SIMPKIN, MARSHALL, and Co, Stationers' Hall Court.

THE

JOURNAL OF APPLIED CHEMISTRY,

A MONTHLY PUBLICATION OF 16 PAGES QUARTO,

Devoted to Chemistry as applied to Arts and Manufactures, Agriculture Metallurgy, &c. &c.

At Two Dollars and Twenty-five Cents per annum, or One Dollar and Seventy-five Cents paid strictly in advance, including postage to United Kingdom.

Each number contains Original Articles on General Chemistry applied to Arts and Manufactures; Matter on Particular Fabrications, as Petroleum, Soaps, Tanning, Dyeing, and numerous others.

A suitable space is also devoted to Practical Recipes and interesting Scientific Facts.

Full and carefully-prepared Market Reviews and Prices Current of Drugs and Chemicals of every description are given in each number for New York, Boston, and Philadelphia, with Tables of Imports.

EIGHTH VOLUME, commenced with January number.

DEXTER & CO., PUBLISHERS,

Spruce Street, New York; 48, Hanover Street, Boston; and 149, South 4th Street, Philadelphia, Pa., U S.A.

SCOTTISH PROVIDENT INSTITUTION,

EDINBURGH: 6, St. Andrew Square. LONDON: 18, King William Street, E.C.

ITS ADVANTAGES over other offices are:—

A larger immediate assurance for the same premium, with the prospect to good lives of eventually receiving very considerable additions.

Thus £1,200 or £1,250 may be secured at once for the premium usually charged for £1,000 only; and policies originally for, say, £1,000, have been increased to £1,400, £1,600, or even to £1,800.

FINANCIAL POSITION.

The Fund, accumulated entirely from the premiums, exceeds £2,250,000. Notwithstanding its low rates, no Office of the same age (Established 1837) has so large a Fund, or shows so large an increase from year to year.

NOTICE.

There will be PUBLISHED, in *NATURE* for JUNE 4, a NOTICE of the Eminent Naturalist,

CHARLES DARWIN, F.R.S.

By DR. ASA GRAY, With a PORTRAIT beautifully ENGRAVED ON STEEL, by CHARLES H. JEENS, Forming the THIRD of the SERIES of ILLUSTRATED ARTICLES on

"SCIENTIFIC WORTHIES."

The Publishers would urge upon all regular Subscribers and Readers of NATURE to bring this Announcement under the notice of their Scientific Friends, and those who are Members of Scientific Societies, before their co-Members.

As the printing of the Portrait requires considerable time, it is requested that Orders for Extra Copies be given at the earliest possible moment.

NEW WORK BY RICHARD A. PROCTOR, B.A.

Just published, in 8vo, illustrated by 22 Lithographic Charts (4 coloured) and 22 Woodcut Diagrams, price 16s

MANCHESTER

TUESDAY, JUNE 2.

GEOLOGICAL SOCIETY, at 8 30.—Siliceous Boulders.

TO SECRETARIES OF SCIENTIFIC AND LITERARY SOCIETIES.

It having been suggested that the publication of a weekly Diary in NATURE of the Meetings, &c. *of the various provincial* Scientific and Literary Societies *would be found very useful, not only to the Members of such Societies, but to all who are interested in scientific and literary subjects, the Publishers have determined to devote a portion of their Advertisement columns to this purpose, and to insert* NOTICES OF MEETINGS, SUBJECTS OF LECTURES, *&c., at the nominal charge of* One Shilling *for each insertion.*

The Publishers of NATURE *will be glad if the Secretaries of Societies will aid them in their endeavours to make this weekly Diary as complete and useful as possible. Notices intended for insertion therein must be sent, addressed to the* Publishers, *by* Wednesday Mornings.

OFFICE—29, BEDFORD STREET, STRAND.

CARACAS

Owes its delicious flavour to the choice Caracas and other Cocoas with which it is manufactured.

COCOA

WORKS IN PHYSICAL SCIENCE.

Flower (W. H.)—An INTRODUCTION to the OSTEOLOGY of the MAMMALIA. Being the substance of the Course of Lectures delivered at the Royal College of Surgeons of England in 1870. By W. H. FLOWER, F.R.S., F.R.C.S., Hunterian Professor of Comparative Anatomy and Physiology. With numerous Illustrations. Globe 8vo, 7*s.* 6*d.*

Although the present work contains the substance of a Course of Lectures the form has been changed, so as the better to adapt it as a handbook for students. Theoretical views have been almost entirely excluded; and while it is impossible in a scientific treatise to avoid the employment of technical terms, it has been the author's endeavour to use no more than absolutely necessary, and to exercise due care in selecting only those that seem most appropriate, or which have received the sanction of general adoption. With a very few exceptions the illustrations have been drawn expressly for this work from specimens in the Museum of the Royal College of Surgeons.

Galton—Works by Francis Galton, F.R.S.—

METEOROGRAPHICA, or Methods of Mapping the Weather. Illustrated by upwards of 600 Printed Lithographic Diagrams. 4to, 9*s.*

As Mr. Galton entertains strong views on the necessity of meteorological charts and maps, he determined, as a practical proof of what could be done, to chart the area of Europe, so far as meteorological stations extend, during one month, viz. the month of December 1861. Mr. Galton got his data from authorities in every part of Britain and the Continent, and on the basis of these has here drawn up nearly a hundred different maps and charts, showing the state of the weather all over Europe during the above period.

HEREDITARY GENIUS: An Inquiry into its Laws and Consequences. Demy 8vo, 12*s.*

"A most able and most interesting book."—*Times.* "We know through the admirable labours of Mr. Galton, that Genius tends to be inherited."—Darwin's "Descent of Man," vol. i. p. 3.

Geikie (A.)—SCENERY of SCOTLAND, Viewed in Connection with its Physical Geography. With Illustrations and a new Geological Map. By ARCHIBALD GEIKIE, Professor of Geology in the University of Edinburgh. Crown 8vo, 10*s.* 6*d.*

"We can confidently recommend Mr. Geikie's work to those who wish to look below the surface and read the physical history of the Scenery of Scotland by the light of modern Science."—*Saturday Review.* "Amusing, instructive, and picturesque."—*Times.*

Guillemin.—The FORCES of NATURE: A Popular Introduction to the Study of Physical Phenomena. By AMEDEE GUILLEMIN. Translated from the French by Mrs. NORMAN LOCKYER; and Edited, with Additions and Notes, by J. NORMAN LOCKYER, F.R.S. Illustrated by 11 Coloured Plates and 455 Woodcuts. Second Edition. Imperial 8vo, cloth, extra gilt, 31*s.* 6*d.*

"Translator and Editor have done justice to their trust. The text has all the force and flow of original writing, combining faithfulness to the author's meaning with purity and independence in regard to idiom; while the historical precision and accuracy pervading the work throughout speak of the watchful editorial supervision which has been given to every scientific detail. Nothing can well exceed the clearness and delicacy of the illustrative woodcuts, borrowed from the French edition, or the purity and chromatic truth of the coloured plates. Altogether the work may be said to have no parallel, either in point of fulness or attraction, as a popular manual of physical science. . . . What we feel, however, bound to say, and what we say with pleasure, is, that among works of its class no publication can stand comparison either in literary completeness or in artistic grace with it."—*Saturday Review.*

Hooker (Dr.)—The STUDENT'S FLORA of the BRITISH ISLANDS. By J. D. HOOKER, C.B. F.R.S. M.D. D.C.L., Director of the Royal Gardens, Kew. Globe 8vo, 10*s.* 6*d.*

The object of this work is to supply students and field-botanists with a fuller account of the Plants of the British Islands than the manuals hitherto in use aim at giving. The ordinal, generic, and specific characters have been re-written, and are to a great extent original, and drawn from living or dried specimens, or both. "Cannot fail to perfectly fulfil the purpose for which it is intended."—*Land and Water.* "Containing the fullest and most accurate manual of the kind that has yet appeared."—*Pall Mall Gazette.*

Huxley (Professor).—LAY SERMONS, AD- DRESSES, and REVIEWS. By T. H. HUXLEY, LL.D. F.R.S. New and Cheaper Edition. Crown 8vo, 7*s.* 6*d.*

Fourteen Discourses on the following subjects:—1. On the Advisableness of Improving Natural Knowledge. 2. Emancipation—Black and White. 3. A Liberal Education, and where to find it. 4. Scientific Education. 5. On the Educational Value of the Natural History Sciences. 6. On the Study of Zoology. 7. On the Physical Basis of Life. 8. The Scientific Aspects of Positivism. 9. On a Piece of Chalk. 10. Geological Contemporaneity and Persistent Types of Life. 11. Geological Reform. 12. The Origin of Species. 13. Criticisms on the "Origin of Species." 14. On Descartes' "Discourse touching the Method of using one's Reason rightly and of seeking Scientific Truth."

LESSONS in ELEMENTARY PHYSIOLOGY. With numerous Illustrations. New Edition. 18mo, cloth, 4*s.* 6*d.*

This book describes and explains, in a series of graduated lessons, the principles of Human Physiology, or the Structure and Functions of the Human Body. The first lesson supplies a general view of the subject. This is followed by sections on the Vascular or Venous System, and the Circulation; the Blood and the Lymph; Respiration; Sources of Loss and of Gain to the Blood; The Functions of Alimentation; Motion and Locomotion; Sensations and Sensory Organs; the Organs of Sight; the Coalescence of Sensations with one another and with other States of Consciousness; the Nervous System and Innervation; Histology, or the Minute Structure of the Tissues. A Table of Anatomical and Physiological Constants is appended. "Unquestionably the clearest and most complete elementary treatise on this subject that we possess in any language."—*Westminster Review.* "Pure gold throughout."—*Guardian.*

Jellet (John H., B.D.)—A TREATISE on the THEORY of FRICTION. By JOHN H. JELLET, B.D., Senior Fellow of Trinity College, Dublin; President of the Royal Irish Academy. 8vo, 8*s.* 6*d.*

This work consists of eight chapters as follows:—I. Definitions and Principles. II. Equilibrium and Frictions. III. Extreme Positions of Equilibrium. IV. Movement of a Particle or System of Particles. V. Motion of a Solid Body. VI. Necessary and Possible Equilibrium. VII. Determination of the Actual Value of the Acting Force of Friction. VIII. Miscellaneous Problems—1. Problems of the Top. 2. Friction Wheels and Locomotives. 3. Questions for Exercise. "The book supplies a want which has hitherto existed in the science of pure mechanics."—*Engineer.*

Jones.—The OWENS COLLEGE JUNIOR COURSE of PRACTICAL CHEMISTRY. By FRANCIS JONES, Chemical Master in the Grammar School, Manchester. With Preface by Professor ROSCOE. 18mo, with Illustrations, 2*s.* 6*d.*

MACMILLAN AND CO., London.

MR. BOWDLER SHARPE'S NEW ORNITHOLOGICAL WORKS WILL BE READY IN A FEW DAYS.

A NEW EDITION, thoroughly revised and augmented, of

LAYARD'S BIRDS of SOUTH AFRICA. Illustrated by 12 Coloured Plates Subscription price, £1 11s. 6d.

BERNARD QUARITCH, 15, Piccadilly, London.

THE ZOOLOGIST.

A MONTHLY JOURNAL OF NATURAL HISTORY.

Conducted by EDWARD NEWMAN, F.L S. F.Z.S. &c.

The Zoologist was established in 1843 to record and preserve observations on subjects similar to those treated of in White's "Natural History of Selborne," and the success which has attended it is sufficient proof that its plan is acceptable to "out-of-door naturalists," those who delight in observing the manners, habits, the private lives, the migrations, movements, nests, young and food of animals It contains original papers and records of facts relating to Quadrupeds, Birds, Reptiles, Fishes, and Insects, together with notices of recent works on every branch of Natural History. The editor has been assisted by more than two hundred of our very best zoologists.

Published on the First of every Month.

PRICE ONE SHILLING.

London: JOHN VAN VOORST, 1, Paternoster Row.

Second Edition, royal 8vo, cloth extra gilt, 31s 6d.

The DEPTHS of the SEA: An Account of the General Results of the Dredging Cruises of H M SS *Porcupine* and *Lightning* during the Summers of 1868-69-70, under the Scientific Direction of Dr Carpenter, F.R S, J. Gwyn Jeffries, F R S, and Dr. Wyville Thomson, F.R.S. By C WYVILLE THOMSON, F.R S, &c, Director of the Civilian Scientific Staff of the *Challenger* Expedition. Illustrated by 8 Maps and Plates and nearly 100 Woodcuts

"The book is full of interesting matter, and is written by a master of the art of popular exposition It is excellently illustrated, both coloured maps and woodcuts possessing high merit. Those who have already become interested in the dredging operations will, of course, make a point of reading this work, those who wish to be pleasantly introduced to the subject, and rightly to appreciate the news which arrives from time to time from the *Challenger*, should not fail to seek instruction from Prof Thomson"—*Athenæum.*

Second Edition, royal 8vo, cloth extra, 31s 6d.

The FORCES of NATURE: a Popular Introduction to the Study of Physical Phenomena. By AMEDEE GUILLEMIN Translated from the French by MRS. NORMAN LOCKYER, and Edited, with Additions and Notes, by J NORMAN LOCKYER, F.R S Illustrated by 11 Coloured Plates and 455 Woodcuts.

"Translator and editor have done justice to their trust. The text has all the force and flow of original writing, combining faithfulness to the author's meaning with purity and independence in regard to idiom; while the technical precision and accuracy pervading the work throughout speak of the watchful editorial supervision which has been given to every scientific detail Altogether, the work may be said to have no parallel, either in point of fulness or attraction, as a popular manual of physical science"—*Saturday Review.*

Third Edition, royal 8vo, cloth extra, 21s

SPECTRUM ANALYSIS. By Professor ROSCOE, F.R.S. With Appendices, Engravings, Maps, and Chromolithographs

"The illustrations—no unimportant part of a book on such a subject—are marvels of wood-printing, and reflect the clearness which is the distinguishing merit of Mr. Roscoe's explanations"—*Saturday Review.*

"The lectures themselves furnish a most admirable elementary treatise on the subject, whilst by the insertion in appendices to each lecture of extracts from the most important published memoirs, the author has rendered it equally valuable as a text-book for advanced students."—*Westminster Review.*

CALIBAN: The MISSING LINK. By DANIEL WILSON, LL D., Professor of History and English Literature in University College, Toronto. 8vo, 10s. 6d.

MACMILLAN & CO., LONDON.

JUDSON'S DYES.—18 Colours, 6d. each.

RIBBONS, WOOL, SILK, FEATHERS,

Completely dyed in 10 minutes without soiling the hands.

Full Instructions supplied. Of all Chemists and Stationers.

JUDSON'S DYES.—Dyeing at Home.—JUDSON'S simple DYES are most useful and effectual. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c

JUDSON'S DYES.—Photographic Paper Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES. Beautiful effects are thus produced in green, pink, brown, and many other colours—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES.—Ferns, Grasses, Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c, by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed

JUDSON'S DYES.—Ink—Ink—Ink.—A Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water.

JUDSON'S DYES.—For Colouring Architectural Plans, &c.—Much trouble may be saved in grinding up colours to a uniform tint They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades.

JUDSON'S DYES.—For Staining Wood.—Diluted with Water They sink deeply into the fibre, and will not rub off They form the most economical stain on record. Light Brown for mahogany colour is excellent; No. 2 Black for walnut; Canary for satin; also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE

Of Chemists and Oilmen in London, Chemists and Stationers in the Country

VICHY WATERS COMPANY,

27, MARGARET STREET, REGENT STREET, LONDON, W.

DEPOT FOR ALL FOREIGN MINERAL WATERS, VICHY.

The use of the Natural Waters of Vichy is extending vastly. They are most efficacious in all complaints arising from acidity. They make the blood more alkaline and less coagulable, and promote its circulation. In the derangement of the digestive functions, and in all the chronical disorders of the abdominal organs, their good effects are shown. The Waters of Vichy are alkaline and gaseous, and although medicinal they are agreeable to the palate, from their slightly acid taste. Of all mineral waters they are the most exported.

PERUVIAN GOVERNMENT GUANO.

MESSRS. J. HENRY SCHRODER & CO.,

OF EAST INDIA AVENUE, AND 15, LEADENHALL STREET, LONDON,

Hereby Give NOTICE that they are now the SOLE CONSIGNEES of this GUANO in the United Kingdom.

The price is 13*l.* per ton, for lots of not less than 30 tons, or 14*l.* 5*s.* per ton for any smaller quantity.

Prompt cash, per ton in bags, gross weight at any of their depôts.

Further particulars may be ascertained on application to them or to their Agents—

Messrs. J. H. SCHRODER & CO., 13, Rumford Place, Liverpool;
Messrs. WM. SMITH & CO., 10, Corn Street, Bristol, and at King's Lynn;
Messrs. EDWARDS, WINKLEY, & CO., 160, High Street, Hull;
Mr. J. CAMERON SWAN, 1, Dean Street, Newcastle-on-Tyne.

DISSOLVED PERUVIAN GUANO,

PREPARED BY

OHLENDORFF & CO.

LONDON, ANTWERP, HAMBURGH, AND EMMERICH-ON-RHINE.

GUARANTEED TO CONTAIN

Nitrogen equal to 10 per cent. of non-volatile Ammonia.
20 " soluble } Guano Phosphates.
4 " insoluble }
Price :—14*l.* per ton for 30 tons and upwards.
15*l.* " lots under 30 tons.

Delivered free at any of their depôts in the United Kingdom AGAINST CASH.

This Manure is prepared from GENUINE PERUVIAN GOVERNMENT GUANO. The result of its special treatment is, that the ammonia is FIXED, the phosphates in the raw Guano rendered SOLUBLE and the Manure brought into the condition of a free dry powder.

It loses nothing from exposure to the atmosphere, or to the heat of the sun. It is offered to the Farmer with a Guarantee of its composition, and is, in fact, the richest, and, considering the quality, the cheapest GUARANTEED Manure at present in the market. Its fertilising properties are such as will enable the consumer to derive the greatest economical advantage from the use of Guano.

OHLENDORFF & CO.

OFFICES :—110, Fenchurch Street, London, E.C.

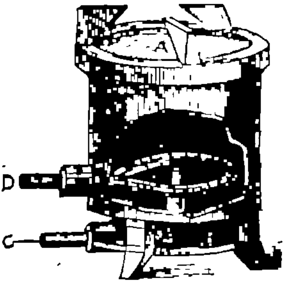
Specimen of Record Slip. Each dot represents one mile of wind. (About half-size)

1871.—FIRST-CLASS BRONZE MEDAL, Royal Cornwall Polytechnic Society. 1872.—SILVER MEDAL. 1873.—INTERNATIONAL EXHIBITION PRIZE MEDAL.

FLETCHER'S
NEW LOW TEMPERATURE BURNER (PATENT)



This Burner gives a range of heating power from a gentle current of WARM air to a BRIGHT RED HEAT, and is so perfectly under control that a common glass bottle may be placed on the tripod without protection and heated to any required temperature without the slightest risk of fracture. In practical use it dispenses with the necessity for drying-closets, sand-and-water baths, &c.
For very low temperatures the ring must be lighted through the opening B, this causes a current of warm air to rise through the gauze above. For higher temperatures the light must be applied on the surface of the gauze A, which will give a large body of clear blue flame. A special pattern is made with a blast tube, by which the flame on the surface can be concentrated and urged until it gives almost a clear white heat, the temperature depending on the air supplied through the blast tube.
Price, without blast tube 7*s* 6*d*
„ with blast tube for high temperatures ... 9*s*. 0*d*.

UNIVERSAL FURNACE (GAS),
For High Temperatures (without blast) for Crucibles, Muffles, &c., in several sizes and patterns. Special designs made to order
NEW BUNSEN BURNERS, giving a range of temperature up to a clear white heat, 10*s* 6*d*.
HOT BLAST BLOWPIPES, giving temperatures exceeding the fusing-point of platinum, 11*s* 6*d*, 13*s*, 15*s*
POWERFUL FOOT-BLOWERS, 18*s*
Drawings and description from dealers in Chemical Apparatus, or from
THOMAS FLETCHER, F.C.S.,
13 & 15, SUEZ STREET,
WARRINGTON.

JUDSON'S DYES.—18 Colours, 6d. each.
RIBBONS, WOOL, SILK, FEATHERS,
Completely dyed in 10 minutes without soiling the hands.
Full Instructions supplied. Of all Chemists and Stationers

JUDSON'S DYES.—Dyeing at Home.—
JUDSON'S simple DYES are most useful and effectual. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper
Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES Beautiful effects are thus produced in green, pink, brown, and many other colours—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES.—Ferns, Grasses,
Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c., by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed.

JUDSON'S DYES.—Ink—Ink—Ink.—A
Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water.

JUDSON'S DYES.—For Colouring Architectural Plans, &c.—Much trouble may be saved in grinding up colours to a uniform tint. They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades.

JUDSON'S DYES.—For Staining Wood.—
Diluted with Water. They sink deeply into the fibre, and will not rub off. They form the most economical stain on record Light Brown for mahogany colour is excellent. No. 2 Black for walnut, Canary for satin, also black, lavender, magenta, and many other colours.
SIXPENCE PER BOTTLE
Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

NATURE.—Wanted clean Copies of Nos.
10, 13, and 116. NATURE Office, 29, Bedford Street, Strand, W.C.

THE ZOOLOGIST.

A MONTHLY JOURNAL OF NATURAL HISTORY.

Conducted by EDWARD NEWMAN, F.L.S. F.Z.S. &c.

The Zoologist was established in 1843 to record and preserve observations on subjects similar to those treated of in White's "Natural History of Selborne," and the success which has attended it is sufficient proof that its plan is acceptable to "out-of-door naturalists," those who delight in observing the manners, habits, the private lives, the migrations, movements, nests, young and food of animals. It contains original papers and records of facts relating to Quadrupeds, Birds, Reptiles, Fishes, and Insects, together with notices of recent works on every branch of Natural History. The editor has been assisted by more than two hundred of our very best zoologists.

Published on the First of every Month.

PRICE ONE SHILLING.

London: JOHN VAN VOORST, 1, Paternoster Row.

THE ENTOMOLOGIST'S MONTHLY MAGAZINE.

Price Sixpence, monthly, 24 pages 8vo., with occasional Illustrations.

Conducted by J. W. DOUGLAS, R. MCLACHLAN, F.L.S., E. C. RYE, and H. T. STAINTON, F.R.S., &c.

This Magazine, commenced in 1864, contains standard articles and notes on all subjects connected with Entomology, and especially on the Insects of the British Isles.

Subscription—Six Shillings per Volume, post-free. The volumes commence with the June number in each year.

Vols. I. to V. (strongly bound in cloth) may be obtained by purchasers of the entire set to date, at the increased price of 10s. each; the succeeding vols. may be had separately or together at 7s. each.

London: JOHN VAN VOORST, 1, Paternoster Row.

N.B.—Communications, &c., should be sent to the Editors at the above address.

LETTERS from H.M.S. "Challenger,"
By Professor WYVILLE THOMSON, with numerous Illustrations, are now appearing in *Good Words*. Sixpence Monthly, illustrated.

Now ready, at all the Libraries.

SOUTH by WEST: or, Winter in the Rocky Mountains and Spring in Mexico.

Edited by the Rev. CANON KINGSLEY.

With numerous Illustrations. Demy 8vo, 16s.

From the *Times*, May 30, 1874.

"One of the most fresh and pleasant, and in some respects the most original, volumes of travel that has perhaps ever fallen from a young lady's pen. As we close her book, with all its bright and pleasant sketches, rich with the true light of the sunny south fresh before our eyes . . . we have to thank the writer for introducing us once again to the marvellous history of Mexico—a history which can never lose its charm while the English language is spoken."

WORKS BY THE REV. CHARLES KINGSLEY,
Canon of Westminster.

HEALTH and EDUCATION. Second Thousand.
Crown 8vo, 7s. 6d.

"Those who see the importance of translating the precepts of physiology from a scientific 'tongue not understanded of the people' into plain and forcible English, may well rejoice that Mr. Kingsley has taken up the cause." *Pall Mall Gazette*.

TOWN GEOLOGY. Fourth Thousand.
Crown 8vo, 5s.

"A masterpiece of scientific exposition"—*Echo*.

W. ISBISTER & CO., 56, Ludgate Hill, London.

Illustrated by 760 Wood Engravings and Three Coloured Plates, and accompanied by a Series of Problems, medium 8vo, cloth, 18s.

DESCHANEL'S NATURAL PHILOSOPHY:

TO SECRETARIES OF SCIENTIFIC AND LITERARY SOCIETIES.

It having been suggested that the publication of a weekly Diary in Nature of the Meetings, &c. *of the various provincial* Scientific and Literary Societies *would be found very useful, not only to the Members of such Societies, but to all who are interested in scientific and literary subjects, the Publishers have determined to devote a portion of their Advertisement columns to this purpose, and to insert* NOTICES OF MEETINGS, SUBJECTS OF LECTURES, *&c., at the nominal charge of* One Shilling *for each insertion.*

The Publishers of Nature *will be glad if the Secretaries of Societies will aid them in their endeavours to make this weekly Diary as complete and useful as possible. Notices intended for insertion therein must be sent, addressed to the* Publishers, *by* Wednesday Mornings.

Office—29, BEDFORD STREET, STRAND.

"*NATURE.*"

ISMAILÏA

A NARRATIVE OF

THE EXPEDITION TO CENTRAL AFRICA

FOR THE SUPPRESSION OF

THE SLAVE TRADE.

ORGANISED BY ISMAIL, KHEDIVE OF EGYPT.

By SIR SAMUEL BAKER, PASHA, M.A., F.R.S., F.G.S.,

Major-General of the Ottoman Empire, late Governor-General of Equatorial Nile Basin, Gold Medallist of the Royal Geographical Society, Grande Medaille d'Or de la Société de Géographie de Paris, Honorary Member of the Geographical Societies of Paris and Berlin, Author of the "Albert N'yanza Great Basin of the Nile," the "Nile Tributaries of Abyssinia," "Eight Years' Wanderings in Ceylon," "The Rifle and Hound in Ceylon," &c.

MACMILLAN & CO., LONDON.

Just Published. 8vo. Price 14*s.*

A MANUAL OF THE CHEMISTRY OF THE CARBON COMPOUNDS; OR, ORGANIC CHEMISTRY.

By C. SCHORLEMMER, F.R.S.,

LECTURER ON ORGANIC CHEMISTRY IN THE OWENS COLLEGE, MANCHESTER.

"Nor is Mr. Schorlemmer appreciated by the profession for his experimental researches only; his fame is even more widely spread by his 'Manual of Organic Chemistry.' This is one of the favourite works from which the present generation of young chemists derive their information. Having myself to teach a large class of students, I have continuous opportunities of recommending this work and of observing the benefit derived from this recommendation."—PROF HOFMANN.

London: MACMILLAN AND CO.

This day, in 8vo, price 7*s.* 6*d.*

THEORY of the GLACIERS of SAVOY.

BY M. LE CHANOINE RENDU,

Translated by ALFRED WILLS, Q.C., Late President of the Alpine Club.

To which are added the Original Memoir, and Supplementary Articles by PROFESSOR TAIT and JOHN RUSKIN, D.C.L. Edited, with Introductory Remarks, by GEORGE FORBES, B.A., Professor of Natural Philosophy in the Andersonian, University, Glasgow.

In 8vo, price 16*s.*

THE LIFE AND LETTERS OF JAMES DAVID FORBES, F.R.S.,

LATE PRINCIPAL OF THE UNITED COLLEGE IN THE UNIVERSITY OF ST. ANDREWS.

By JOHN CAMPBELL SHAIRP, LL.D., Principal of the United College in the University of St. Andrews; PETER GUTHRIE TAIT, M.A., Professor of Natural Philosophy in the University of Edinburgh; and A. ADAMS-REILLY, F.R.G.S.

With Portraits, Maps, and Illustrations.

"It has seldom been our good fortune to peruse a biography so entirely satisfactory as that contained in the present volume. There were a wonderful simplicity and unity in the character and career of Principal Forbes, and in this delightful memoir the living man is so faithfully represented, that those who had only known him as the indefatigable physicist, the demonstrator, if not the actual discoverer of the phenomena of glacier structure and motion, or those whom his career never reached, will here find themselves introduced to a personal acquaintance; while his many friends and loyal students will gratefully acknowledge that Prof. Shairp and his able coadjutors have done their work wisely and well. At once a graceful literary monument to the memory of a good man, and an exhaustive scientific manual on the special subjects to which Forbes's life was consecrated."—*Spectator.*

MACMILLAN AND CO., London.

THE LONDON & GENERAL WATER PURIFYING COMPANY, LIMITED.

PATENT CISTERN FILTERS, CHARGED SOLELY WITH ANIMAL CHARCOAL, requiring, when once fixed, no attention whatever And superior to all others. *Vide* Professor Frankland's reports to the Registrar-General, July 1866, November 1867, and May 1870. The CAUSE of the SUPPOSED PROPER MOTION of the FIXED STARS With other Geometrical Problems in Astronomy hitherto unsolved. By Lieutenant-Colonel DRAYSON, R.A. F.R A.S., Author of "Practical Military Surveying," &c. Demy 8vo, 10*s*. [This day.

The CAUSE, DATE, and DURATION of the LAST GLACIAL EPOCH of GEOLOGY With an Investigation of a new Movement of the Earth By Lieutenant-Colonel DRAYSON, R.A. F.R A.S Demy 8vo, 10*s*.

The EARTH. A Descriptive History of the Phenomena and Life of the Globe By ELISEE RECLUS. Edited by the late B B WOODWARD. With 234 Maps and Illustrations, and 24 page Maps printed in Colours. 2 vols. large demy 8vo, 26*s*

The OCEAN, ATMOSPHERE, and LIFE. Being the Second Series of a Descriptive History of the Life of the Globe. By ELISEE RECLUS. Translated by the late B. B. WOODWARD, and Edited by HENRY WOODWARD. 2 vols. large demy 8vo Illustrated with 250 Maps or Figures, and 27 Maps printed in Colours. Price 26*s*

CHAPMAN & HALL, 193, Piccadilly.

Second Edition, royal 8vo, cloth extra gilt, 31*s*. 6*d*.

The DEPTHS of the SEA: An Account of the General Results of the Dredging Cruises of H.M.SS. *Porcupine* and *Lightning* during the Summers of 1868-69-70, under the Scientific Direction of Dr. Carpenter, F.R.S., J. Gwyn Jeffries, F.R.S, and Dr. Wyville Thomson, F.R.S. By C WYVILLE THOMSON, F.R.S., &c., Director of the Civilian Scientific Staff of the *Challenger* Expedition. Illustrated by 8 Maps and Plates and nearly 100 Woodcuts

"The book is full of interesting matter, and is written by a master of the art of popular exposition It is excellently illustrated, both coloured maps and woodcuts possessing high merit. Those who have already become interested in the dredging operations will, of course, make a point of reading this work; those who wish to be pleasantly introduced to the subject, and rightly to appreciate the news which arrives from time to time from the *Challenger*, should not fail to seek instruction from Prof Thomson."—*Athenæum*.

Second Edition, royal 8vo, cloth extra, 31*s*. 6*d*.

The FORCES of NATURE: a Popular Introduction to the Study of Physical Phenomena. By AMEDEE GUILLEMIN. Translated from the French by MRS. NORMAN LOCKYER, and Edited, with Additions and Notes, by J. NORMAN LOCKYER, F.R.S Illustrated by 11 Coloured Plates and 455 Woodcuts.

"Translator and editor have done justice to their trust The text has all the force and flow of original writing, combining faithfulness to the author's meaning with purity and independence in regard to idiom, while the technical precision and accuracy pervading the work throughout speak of the watchful editorial supervision which has been given to every scientific detail. Altogether, the work may be said to have no parallel, either in point of fulness or attraction, as a popular manual of physical science."—*Saturday Review*.

Third Edition, royal 8vo, cloth extra, 21*s*.

SPECTRUM ANALYSIS. By Professor ROSCOE, F.R.S. With Appendices, Engravings, Maps, and Chromolithographs.

"The illustrations—no unimportant part of a book on such a subject—are marvels of wood-printing, and reflect the clearness which is the distinguishing merit of Mr. Roscoe's explanations."—*Saturday Review*.

"The lectures themselves furnish a most admirable elementary treatise on the subject, whilst by the insertion in appendices to each lecture of extracts from the most important published memoirs, the author has rendered it equally valuable as a text-book for advanced students."—*Westminster Review*.

MACMILLAN & CO., LONDON.

THIS DAY, in 8vo, price 14*s*.

ESSAYS AND ADDRESSES.

BY

PROFESSORS & LECTURERS OF OWENS COLLEGE, MANCHESTER

Published in Commemoration of the Opening of the New College Buildings, October 7th, 1873.

CONTENTS.

OPENING ADDRESS. By the Duke of Devonshire, K.G. F.R.S., President of the Court of Governors.

"On some Relations of Culture to Practical Life." By J. G. Greenwood, Principal and Professor of Greek.

"Original Research as a Means of Education." By H. E. Roscoe, F.R.S., Professor of Chemistry.

"Solar Physics." By Balfour Stewart, F.R.S., Professor of Natural Philosophy.

"The Sun's Distance from the Earth." By T. H. Core, Professor of Natural Philosophy.

"The Limits of Geological Knowledge." By W. Boyd Dawkins, F.R.S., Curator of the Natural History Museum, and Lecturer in Geology and Palæontology.

"The Use of Steam." By Osborne Reynolds, Professor of Engineering.

"Primeval Vegetation in its Relation to the Doctrines of Natural Selection and Evolution." By W. C. Williamson, F.R.S., Professor of Natural History.

"Science and Medicine." By A. Gamgee, F.R.S., Professor of Practical Physiology and Histology.

"Some Historical Results of the Science of Language." By A. S. Wilkins, Professor of Latin and Comparative Philology.

"The Talmud." By T. Theodores, Professor of Oriental and Modern Languages.

"Provencal Poetry in Old and Modern Times." By H. Breymann, Lecturer on French Language and Literature.

"The Recent Reorganisation of the English Law Courts, in its Relation to their Past History." By J. Bryce, D.C.L., Professor of Jurisprudence and Law.

"The Railways and the State." By W. Stanley Jevons, F.R.S., Professor of Logic, and Mental and Moral Philosophy, and Political Economy.

"The Peace of Europe.". By A. W. Ward, Professor of English and History.

MACMILLAN & CO., LONDON.

HENRY S. KING & CO.'S LIST.

This day, demy 8vo, cloth, 10s. 6d.

CONTENTS:—The Relation of the Evolution Hypothesis to Human Psychology—New Theories of Emotional Expression—Recent German Experiments with Sensation—Belief; its Varieties and its Conditions—The Genesis of the Free-will Doctrine—On some Elements of Moral Self-culture—The Basis of Musical Sensation—Aspects of Beauty in Musical Form—The Nature and Limits of Musical Expression—The Æsthetic Aspects of Character—The Representation of Character in Art—Lessing's Hamburg Dramaturgy—On the Possibility of a Science of Æsthetics.

Dr. W. B. CARPENTER'S PRINCIPLES of MENTAL PHYSIOLOGY. With their Applications to the Training and Discipline of the Mind, and the Study of its Morbid Conditions. 8vo, illustrated, cloth, 12s.

PHYSIOLOGY for PRACTICAL USE. By various Writers. Edited by JAMES HINTON. 2 vols. crown 8vo with 50 Illustrations, cloth, 12s. 6d.

THE INTERNATIONAL SCIENTIFIC SERIES.

1. Professor Tyndall's Forms of Water in Clouds and Rivers, &c. Fourth Edition, illustrated, 5s.
2. Walter Bagehot's Physics and Politics. Second Edition, 4s.
3. Dr. Edward Smith's Foods. Third Edition, illustrated, 5s.
4. Professor Bain's Mind and Body. Third Edition, illustrated, 4s.
5. Herbert Spencer's Study of Sociology. Third Edition, illustrated, 5s.
6. Prof. Stewart's Conservation of Energy. Second Edition, illustrated, 5s.
7. Dr. J. B. Pettigrew's Animal Locomotion. Second Edition, illustrated, 5s.
8. Dr. Henry Maudsley's Responsibility in Mental Disease. Second Edition, 5s.
9. Prof. Josiah P. Cooke's New Chemistry. Second Edition, illustrated, 5s.
10. Prof. Sheldon Amos's Science of Law. Crown 8vo. [Immediately.

HENRY S. KING & CO., 65, Cornhill, and 12, Paternoster Row.

SMITH, ELDER, & CO.'S NEW BOOKS.

NEW EDITION OF DARWIN ON CORAL REEFS.

The STRUCTURE and DISTRIBUTION of CORAL REEFS. By CHARLES DARWIN, F.R.S. New and Revised Edition. [Nearly ready.

Now ready, with a Map, crown 8vo, 10s. 6d.

The STORY of the ASHANTEE CAMPAIGN. By WINWOOD READE, the *Times* Special Correspondent. Author of "The African Sketch Book," &c

*** This work is not a mere reprint of the Author's letters in the *Times*.

Extract from the Author's Preface.

"It was my fortune to see more fighting than anyone else in the expedition, excepting a few officers serving in the native regiments. Moreover, no other writer, military or civil, witnessed either of these three events—the Storming of Amoaful by the Black Watch; the Storming of Ordahsu by the Rifle Brigade; or the Taking of Coomassie by Sir Archibald Alison and Colonel McLeod. I witnessed these three events."

HOURS in a LIBRARY. By Leslie Stephen. Crown 8vo, 9s.

CONTENTS:—De Foe's Novels—Richardson's Novels—Pope as a Moralist—Mr. Elwin's Edition of Pope—Some Words about Sir Walter Scott—Nathaniel Hawthorne—Balzac's Novels—De Quincey.

MOHAMMED and MOHAMMEDANISM: Lectures delivered at the Royal Institution of Great Britain in February and March 1874. By R. BOSWORTH SMITH, M.A. Crown 8vo, 6s.

LITERATURE and DOGMA: an Essay towards a better Apprehension of the Bible. By MATTHEW ARNOLD. Fourth Edition, revised. Crown 8vo, 9s.

"This book, when it gets known, will become a power, against which one may set oneself in opposition, but with which one must reckon."—*Theological Review* of Leyden.

SWISS ALLMENDS and a WALK to SEE THEM: a Second Month in Switzerland. By F. BARHAM ZINCKE, Vicar of Wherstead, and Chaplain-in-Ordinary to the Queen. Crown 8vo, with a Map, 7s. 6d.

SANITARY ARRANGEMENTS FOR DWELLINGS, intended for the Use of Officers of Health, Architects, Builders, and Householders. With numerous Illustrations. By WILLIAM EASSIE, C.E. F.L.S. F.G.S. &c, Author of "Healthy Houses." Crown 8vo, with Illustrations, 5s. 6d.

London: SMITH, ELDER, & CO, 15, Waterloo Place.

NEARLY READY.

TELEGRAPH AND TRAVEL.

A NARRATIVE of the FORMATION and DEVELOPMENT of TELEGRAPHIC COMMUNICATION between ENGLAND and INDIA, under the Orders of Her Majesty's Government, with incidental Notices of the Countries through which the Lines pass.

By COLONEL SIR FREDERIC GOLDSMID, C.B., K.C.S.I.,

Late Director of the Government Indo-European Telegraph.

With numerous Illustrations and Maps. 8vo.

MACMILLAN & CO., LONDON.

VICHY WATERS COMPANY,

27, MARGARET STREET, REGENT STREET, LONDON, W.

DEPÔT FOR ALL FOREIGN MINERAL WATERS, VICHY.

The use of the Natural Waters of Vichy is extending vastly. They are most efficacious in all complaints arising from acidity. They make the blood more alkaline and less coagulable, and promote its circulation. In the derangement of the digestive functions, and in all the chronical disorders of the abdominal organs, their good effects are shown. The Waters of Vichy are alkaline and gaseous, and although medicinal they are agreeable to the palate, from their slightly acid taste. Of all mineral waters they are the most exported.

Now Ready. Price One Shilling.

ART

PICTORIAL AND INDUSTRIAL: A REVIEW.

FOR JUNE 1874.

WITH CHOICE EXAMPLES FROM VARIOUS SOURCES,

REPRODUCED BY THE HELIOTYPE AND OTHER PERMANENT PROCESSES.

Edited by JOHN FORBES-ROBERTSON.

JOHN MURRAY, Albemarle Street.

HOLLOWAY'S OINTMENT and PILLS.—Health Lost and Found.—After safely struggling through the winter, multitudes will fall victims to the throat and chest complaints so common in the spring If the first symptoms receive attention and judicious treatment, not only will future danger be averted, but old ailments will give way and better health will be attained than was enjoyed before the illness. No treatment for safety and certainty of success may be so confidently relied upon as that discovered by Professor Holloway, whose Pills and Ointment always restore the sufferer. While the Pills are taken in moderate doses, the Ointment should be well rubbed upon the skin, near the part affected, as actively as salt is rubbed into meat

AGRICULTURAL PUBLICATIONS.

THE PROPORTIONATE FATTENING and Flesh-forming Qualities of nearly all the Feeding Substances in general use by Farmers: also the Manurial Value of the Residue from each article.

Opinions of the Press.

"It is clearly a very useful indicator of the values of the foods for cattle.—*Athenæum*

"The chart cannot fail to be very useful to the keepers of horses and meat stock, and it will be an 'eye-opener' to many who will perceive how it is they have been so often disappointed after giving large prices for fancy foods."—*Sporting Times.*

"A very useful table. The system is a very capital one, and we recommend our agricultural friends to invest a shilling, and procure one of the tables published by the Agricultural and Horticultural Association."—*Land and Water.*

Price One Shilling, Post Free.

MATCHES.

NEW EDITION.

With the Latest Discoveries and Rectifications.

THE HANDY ROYAL ATLAS OF MODERN GEOGRAPHY.

By ALEX. KEITH JOHNSTON,
LL.D. F.R.S.E. F.R.G.S.
Author of the "Physical Atlas," the "Royal Atlas," &c.

Exhibiting the present condition of Geographical Discovery and Research in the several Countries, Empires, and States of the World.

Forty-six Maps, clearly printed and carefully coloured, with General Index.

In imperial 4to, half-bound morocco, 2*l.* 12*s.* 6*d.* This Edition contains a new Map of North Polar Regions.

"Is probably the best work of the kind now published."—*Times.*

"The ample illustrations of recent discovery, and of the great groups of dependencies on the British Crown, renders Dr. Johnston's the best of all Atlases for English use."—*Pall Mall Gazette.*

"The 'Handy Atlas' is thoroughly deserving of its name. Not only does it contain the latest information, but its size and arrangement render it perfect as a book of reference."—*Standard.*

By the same Author.

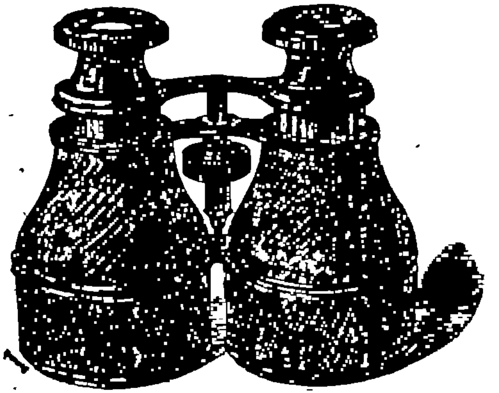
THE ROYAL ATLAS OF MODERN GEOGRAPHY

A Series of entirely Original and Authentic Maps, with Indices to each Map, comprising nearly 150,000 names of Places contained in the Atlas. A New Edition, brought up to the Present Time. Containing a New Map of North Polar Regions. In imperial folio, half-bound morocco, 5*l.* 15*s.* 6*d.*

"We know no series of maps which we can more warmly recommend."—*Saturday Review.*

WILLIAM BLACKWOOD & SONS, 45, George Street, Edinburgh; and 37, Paternoster Row, London.

BROWNING'S NEW BINOCULARS.



BROWNING'S NEW "PANERGETIC" OPERA, FIELD, and RACE GLASS, for general use, brilliant light, extensive field of view, and sharp definition.

THE "POLYCRATIC" OPERA, for distant objects, has 18 lenses, and possesses great power, with portability.

THE "EURYSCOPIC" OPERA, for the theatre, has the largest field of view, giving delightfully easy vision, 2*l.* 2*s.* New Illustrated List free.

ACHROMATIC BINOCULARS, from 15*s.*

NOTICES OF THE PRESS.

"Brings out figures with marvellous distinctness, and has a very large field of view, and so very many advantages over the other Binoculars that we have seen that we confidently award very high praise indeed."—*Popular Science Review.*

"Exhibits objects with remarkable brightness and sharpness."—*The Observer.*

"A wide extension of the field of view is attained, while even in misty weather objects are exhibited with wonderful clearness."—*Naval and Military Gazette.*

"A very extensive field of view is obtained, and objects in the distance are shown with great distinctness."—*English Churchman.*

SCIENTIFIC BOOKS.—A few copies can still be had of Sowerby's Mineral Conchology, British and Exotic Mineralogy, English Fungi, British Miscellany, Zoological Journal, Genera of Shells, Species Conchólorum, Tankerville Cat., &c., &c., as well as a large stock of second-hand books on Geology, Conchology, Entomology, &c. &c. SOWERBY, 167A, Strand.

PRIVATE TUITION.—A Clergyman, of long experience and uniform success in Tuition, RECEIVES FOUR PUPILS. Home comforts combined with great educational advantages. The highest references.—M.A., care of Editor of NATURE, 29, Bedford Street, Strand, W.C.

SCIENCE TUITION by CORRESPONDENCE.—For Terms, apply to D.C.L., care of Macmillan & Co., 29, Bedford Street, Strand, London, W.C.

The REV. L. HENSLEY, Vicar of Hitchin, Herts, formerly Fellow and Assistant Tutor of Trinity College, Cambridge, receives several Pupils to prepare for the Universities.

A LADY requires a RE-APPOINTMENT. German, French, the Elements of Natural Science, together with all the usual branches of Education. Highest References can be given.—Address, M.A.H., care of the Publishers of NATURE, 29, Bedford Street, Covent Garden, W.C.

NATURAL SCIENCE MASTERSHIP WANTED after July 31 next by a Graduate of Cambridge, in a first-rate Grammar School. The highest testimonials.—Address, M.A., care of NATURE, 29, Bedford Street, Covent Garden, London, W.C.

A YOUNG LADY seeks a RE-ENGAGEMENT as GOVERNESS in London. She is capable of teaching the rudiments of NATURAL SCIENCE, and has a thorough knowledge of French, German, and the usual branches of a sound English Education.—Address, Miss K., NATURE Office, 29, Bedford Street, Strand, W.C.

REQUIRED, a MATHEMATICAL and NATURAL SCIENCE MASTERSHIP in a good School, by a CAMBRIDGE HONOUR-MAN.—Address—Alpha, care of the Publishers of NATURE, 29, Bedford Street, Strand, W.C.

To ASTRONOMERS and OTHERS.—A skilful Photographer, who is a Chemist and Amateur Astronomer, and possesses also some Literary Ability, wishes for an ENGAGEMENT in which these qualifications would be of service.—D.W., Doctor's Cottages, South Shore, Blackpool.

FOR SALE.

AN AMATEUR'S COLLECTION of FOSSILS (stratigraphically arranged) Precious Stones, Agates, Sea, Land, and Freshwater Shells. Suitable for a student of Primeval and Progressive Natural History. For particulars apply to X.Y.Z., care of the Publisher of NATURE, 29, Bedford Street, Strand, W.C.

WANTED to PURCHASE, a CLASSIFIED COLLECTION of BRITISH BIRDS' EGGS. Must all be well authenticated.—Apply, stating terms, to E. E. B., care of Messrs MACMILLAN and Co., Bedford Street, Strand, W.C.

To LECTURERS and OTHERS.—For Sale, a Browning's AUTOMATIC ELECTRIC LAMP, with battery, large parabolic reflector, carbons and wires complete. All new. Suitable for spectrum experiments. Apply to V. E. A., 120, Falkner Street, Liverpool.

TO NATURALISTS and GEOLOGISTS.—Collections of the beautiful Fossils from a lately-made Cutting near Orford Castle, Suffolk (see Advertisement in NATURE, May 14th), are now being forwarded to the Subscribers. Lists of the Fossils, with other particulars, can now be had by addressing (with stamped envelope) Fredc. Collingwood, Esq., F.G.S., 4, St. Martin's Place, Trafalgar Square. A secure postal-box, with specimens from the Orford Castle Cutting, of Nassa granulata, Trophon muricatum, Tectura virginea, and Emarginula fissura, will be forwarded on receipt of twelve postage-stamps.

NOTICE.—To Science Classes.—MOTTERSHEAD AND CO., LABORATORY FURNISHERS, EXCHANGE STREET, MANCHESTER, supply all the Apparatus enumerated in the SOUTH KENSINGTON LISTS FOR THE USE OF TEACHERS OF PHYSICAL SCIENCE (Light, Heat, Electricity, Magnetism, &c.), and will be happy to show intending purchasers specimens of the various Instruments, or to forward Estimates on application. Orders exceeding £2 in value delivered free to any railway station in England.

TRUSSES (Self-adjusting), in use for the last sixty years, and same as worn by his late Majesty William IV. From 10s. each. SALMON ODY & CO., by appointment to the Army and Navy, 292, Strand, London. Price List post free.

CHEST EXPANDER and TROUSERS BRACE combined, 8s.; Ladies' Chest Expanders from 5s. 6d. SALMON ODY & CO., 292, Strand, London. Established 1806.

ELASTIC STOCKINGS for Varicose Veins or Weak Joints; and LADIES' ABDOMINAL BELTS, made to any size. Directions for self-measurement and prices post free. SALMON ODY & CO., 292, Strand, London.

JAMES WOOLLEY, SONS, & CO.,

69, MARKET STREET, MANCHESTER.

CHEMICAL APPARATUS AND REAGENTS,

For Lecture and Class Demonstration, Laboratory Instruction, &c.

SETS OF APPARATUS AND CHEMICALS

For the various Public Examinations.

Portable Chemical Cabinets adapted for Private Study.

Optician and Manufacturer of
ACHROMATIC MICROSCOPES,
and all kinds of Scientific Instruments.

Pillischer's
St. Thomas's Hospital
Microscope,

As supplied to the principal Universities and Hospitals.
Monocular, £5, Binocular, £10 10s.

PILLISCHER'S New Series of Correction and Immersion Object-glasses, from ¼ to 1/16 inch, unequalled for their brilliant Defining and Penetrating Power.

PILLISCHER'S Improved CLINICAL THERMOMETERS, in Sterling Silver Cases, 3½ in., 14s., 4½ in., 17s., 6 in., in Wooden Case, 10s., including a Kew Certificate.

ILLUSTRATED DESCRIPTIVE CATALOGUE MAY BE HAD ON APPLICATION TO

88, New Bond Street, W., London.

"THE GARDEN,"

A Weekly Illustrated Journal devoted solely to Horticulture in all its Branches.

"THE GARDEN" is conducted by WILLIAM ROBINSON, F.L.S., Author of "Hardy Flowers," "Alpine Flowers for English Gardens," "The Parks, Promenades, and Gardens of Paris," &c., and the best Writers in every Department of Gardening are contributors to its pages.

The following are some of the subjects regularly treated of in its pages:—

- The Flower Garden.
- Landscape Gardening.
- The Fruit Garden.
- Garden Structures.
- Room and Window Gardens.
- Notes and Questions.
- Market Gardening.
- Trees and Shrubs.
- Hardy Flowers.
- Town Gardens.
- The Conservatory.
- Public Gardens.
- The Greenhouse and Stove.
- The Household.
- The Wild Garden.
- The Kitchen Garden.

"THE GARDEN" may be obtained through all Newsagents and at the Railway Bookstalls, at 4d. per Copy. It may also be had direct from the Office at 5s. for a Quarter, 9s. 9d. for a Half-year, and 19s. 6d. for a Year, payable in advance, and in Monthly Parts. Specimen Copies (post-free), 4½d.

37, Southampton Street, Covent Garden, S.W.

JUDSON'S DYES.—18 Colours, 6d. each.

RIBBONS, WOOL, SILK, FEATHERS,

Completely dyed in 10 minutes without soiling the hands.

Full Instructions supplied. Of all Chemists and Stationers.

JUDSON'S DYES.—Dyeing at Home.— JUDSON'S simple DYES are most useful and effectual. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES. Beautiful effects are thus produced in green, pink, brown, and many other colours.—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES.—Ferns, Grasses, Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c., by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed.

JUDSON'S DYES.—Ink—Ink—Ink.—A Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water.

JUDSON'S DYES.—For Colouring Architectural Plans, &c.—Much trouble may be saved in grinding up colours to a uniform tint. They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades.

JUDSON'S DYES.—For Staining Wood.— Diluted with Water. They sink deeply into the fibre, and will not rub off. They form the most economical stain on record. Light Brown for mahogany colour is excellent; No. 2 Black for walnut; Canary for satin; also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE

Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

ROYAL GEOGRAPHICAL SOCIETY.

The ANNIVERSARY MEETING will be held (by permission of the Chancellor and Senate) in the Hall of the University of London, Burlington Gardens, on MONDAY, June 22nd, at 1 p.m. Right Honourable Sir H. BARTLE FRERE, K.C.B., President, in the chair.

The DINNER will take place at Willis's Rooms at half-past 6 on the same day. Right Honourable Sir H. BARTLE FRERE, K.C.B., in the chair.

Dinner Charge, Twenty-three Shillings, payable at the door; or Tickets to be had and Places taken at 1, Savile Row, Burlington Gardens.

The Friends of Members are admissible to the Dinner.

THE ONLY CHEAP FARMERS' NEWSPAPER.

THE CHAMBER OF AGRICULTURE JOURNAL
AND FARMERS' CHRONICLE,

Edited by JOHN ALGERNON CLARKE, Secretary to the Central Chamber of Agriculture,

Devotes special attention to the discussions and proceedings of the Chambers of Agriculture of Great Britain (which now number upwards of 18,000 members), besides giving original papers on practical farming, and a mass of intelligence of particular value to the agriculturist.

The London Corn, Seed, Hop, Cattle, and other Markets of Monday are specially reported in this Journal, which is despatched the same evening so as to insure delivery to country subscribers by the first post on Tuesday morning. Price 3d., or prepaid, 15s. a year post free.

NEW ELECTRICAL ANEMOMETER.

NO SHAFT REQUIRED.

INVENTED BY

J. E. H. GORDON, CAIUS COLLEGE, CAMBRIDGE.

Mr. APPS is now prepared to supply these Instruments complete with wires and six-celled battery at the following prices:—

No. I. to indicate direction on an 8-in. dial, £30.

No. II. to indicate direction and velocity on dials, £50.

No. IV. to indicate direction, and print direction and velocity, £100.

In these instruments the communication between the vane and dial is made by 3 or 4 insulated wires.

The battery has to be recharged once in 5 months (about).

The paper can be cut off as soon as desired, but the reels only require refilling once a in months.

The registering instrument can be placed at any distance from the fans or cups.

The clock of the recording instrument being fitted with a dial, there is no necessity for a timepiece for general purposes.

This instrument is now to be seen at work in connection with the Society of Arts' Testing Rooms, International Exhibition, South Kensington; and a

No. IV. Anemometer may now be seen in action at

TO SECRETARIES OF SCIENTIFIC AND LITERARY SOCIETIES.

It having been suggested that the publication of a weekly Diary in Nature of the Meetings, &c. *of the various provincial* Scientific and Literary Societies *would be found very useful, not only to the Members of such Societies, but to all who are interested in scientific and literary subjects, the Publishers have determined to devote a portion of their Advertisement columns to this purpose, and to insert* NOTICES OF MEETINGS, SUBJECTS OF LECTURES, *&c., at the nominal charge of* One Shilling *for each insertion.*

The Publishers of Nature *will be glad if the Secretaries of Societies will aid them in their endeavours to make this weekly Diary as complete and useful as possible. Notices intended for insertion therein must be sent, addressed to the* Publishers, *by* Wednesday Mornings.

Office—29, BEDFORD STREET, STRAND.

DRAPER'S INK (DICHROIC).

THE NEW BLACK INK

DIFFERING FROM ANYTHING ELSE EVER PRODUCED.

Writing becomes a pleasure when this Ink is used. It has been adopted by the principal Banks, Public Offices, and Railway Companies throughout Ireland.

It writes almost instantly Full Black.
Does not corrode Steel Pens.
Is cleanly to use, and not liable to Blot.
Flows easily from the Pen
Blotting-paper may be applied at the moment of writing.

TO BE HAD OF ALL STATIONERS.

FRY'S

VIENNA EXHIBITION
MEDAL FOR PROGRESS,
Awarded to J. S. FRY & SONS.

CARACAS

COCOA

Owes its delicious flavour to the choice Caracas and other Cocoas with which it is manufactured.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS

is allowed by upwards of 500 Medical Men to be the most effective invention in the curative treatment of Hernia. The use of a steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, 2 inches below the hips, being sent to the manufacturer,

JOHN WHITE, 228, Piccadilly.

Price of a Single Truss, 16s., 21s., 26s. 6d., and 31s. 6d.
,, Double ,, 31s. 6d., 42s., and 52s. 6d.
,, Umbilical ,, 42s. and 52s. 6d.
Post-free.

ELASTIC STOCKINGS, KNEE-CAPS,

&c., for Varicose Veins and all cases of weakness and Swellings of the Legs, Sprains, &c. They are porous, light in texture, and inexpensive, and drawn on over an ordinary stocking. Price 4s. 6d., 7s. 6d., 10s., and 16s. each. Postage free.

JOHN WHITE, Manufacturer, 228, Piccadilly, London.

HOLLOWAY'S PILLS.—Medicine for the Spring.—Diseases latent in the system throughout the winter will manifest themselves on the approach of warmer weather, unless the blood be freed from impurities and the body generally from noxious matters. Holloway's Pills have long since established the highest reputation for the full and efficient manner in which they accomplish this purifying purpose. These excellent Pills search every organ, pervade every tissue, and successfully grapple with all deleterious substances, either by neutralising them or expelling them. Holloway's medicine promotes comfort, cheerfulness, health, and strength. The medicine is admirably adapted for the weak and delicate, whose frames are relaxed, whose nerves are unstrung, and whose digestions are upset alike by spring variations and summer's heat.

"NATURE."

Nearly all the Back Numbers of Nature may be obtained through any Bookseller, or of the Publishers, at the Office, 29, Bedford Street, Strand, W.C., to whom all communications relating to Advertisements should likewise be addressed.

Cloth Cases for binding all the volumes, price 1s. 6d. each.

Reading Cases to hold 26 numbers, price 2s. 6d.

To be had through any bookseller or newsagent, or at the Office,

29, BEDFORD STREET, STRAND, W.C.

NATURE.—Wanted clean Copies of Nos. 10, 13, and 116. Nature Office, 29, Bedford Street, Strand, W.C.

WORKS IN PHYSICAL SCIENCE.

Oliver.—Works by Daniel Oliver, F.R.S. F.L.S., Professor of Botany in University College, London, and Keeper of the Herbarium and Library of the Royal Gardens, Kew :—

LESSONS IN ELEMENTARY BOTANY. With nearly Two Hundred Illustrations. New Edition, 18mo, cloth, 4*s*. 6*d*.

This book is designed to teach the elements of Botany on Prof. Henslow's plan of selected Types and by the use of Schedules. The earlier chapters, embracing the elements of Structural and Physical Botany, introduces us to the methodical study of the Ordinal Types. The concluding chapters are entitled, "How to Dry Plants" and "How to Describe Plants." A valuable Glossary is appended to the volume. In the preparation of this work free use has been made of the manuscript materials of the late Prof. Henslow.

FIRST BOOK OF INDIAN BOTANY. With numerous Illustrations. Extra fcap. 8vo, 6*s*. 6*d*.

This manual is, in substance, the author's "Lessons in Elementary Botany," adapted for use in India. In preparing it he has had in view the want, often felt, of some handy *résumé* of Indian Botany, which might be serviceable not only to residents of India, but also to anyone about to proceed thither, desirous of getting some preliminary idea of the botany of the country. "It contains a well-digested summary of all essential knowledge pertaining to Indian botany, wrought out in accordance with the best principles of scientific arrangement."—*Allen's Indian Mail.*

Penrose (F. C.)—On a METHOD of PREDICTING by GRAPHICAL CONSTRUCTION, OCCULTATIONS of STARS by the MOON, and SOLAR ECLIPSES for any GIVEN PLACE. Together with more rigorous methods for the Accurate Calculation of Longitude. By F. C. PENROSE, F.R.A.S. With Charts, Tables, &c., 4to, 12*s*.

The author believes that if, by a graphic method, the prediction of occultations can be rendered more inviting, as well as more expeditious, than by the method of calculation, it may prove acceptable to the nautical profession as well as to scientific travellers or amateurs. The author has endeavoured to make the whole process as intelligible as possible, so that the beginner, instead of merely having to follow directions imperfectly understood, may readily comprehend the meaning of each step, and be able to illustrate the practice by the theory. Besides all necessary charts and tables, the work contains a large number of skeleton forms for working out cases in practice.

Roscoe.—Works by Henry E. Roscoe, F.R.S. Professor of Chemistry in Owens College, Manchester :—

LESSONS IN ELEMENTARY CHEMISTRY, INORGANIC AND ORGANIC. With numerous Illustrations and Chromolithos of the Solar Spectrum, and of the Alkalies and Alkaline Earths. New Edition, 18mo, cloth, 4*s*. 6*d*.

It has been the endeavour of the author to arrange the most important facts and principles of modern chemistry in a plain but concise and scientific form, suited to the present requirements of elementary instruction. For the purpose of facilitating the attainment of exactitude in the knowledge of the subject, a series of exercises and questions upon the lessons has been added. The metric system of weights and measures, and the centigrade thermometric scale, are used throughout this work. The new edition, besides new woodcuts, contains many additions and improvements, and includes the most important of the latest discoveries. "We unhesitatingly pronounce it the best of all our elementary treatises on Chemistry."—*Medical Times.*

Roscoe—(Continued).

SPECTRUM ANALYSIS. Six Lectures, with Appendices, Engravings, Maps, and Chromolithographs. Royal 8vo, 21*s*.

A Third Edition of these popular Lectures, containing all the most recent discoveries and several additional illustrations. "In six lectures he has given the history of the discovery and set forth the facts relating to the analysis of light in such a way that any reader of ordinary intelligence and information will be able to understand what 'Spectrum Analysis' is, and what are its claims to rank amongst the most signal triumphs of Science."—*Nonconformist.*

Stewart (B.)—LESSONS in ELEMENTARY PHYSICS. By BALFOUR STEWART, F.R.S. Professor of Natural Philosophy in Owens College, Manchester. With numerous Illustrations and Chromoliths of the Spectra of the Sun, Stars, and Nebulæ. New Edition, 18mo, 4*s*. 6*d*.

A description, in an elementary manner, of the most important of those laws which regulate the phenomena of nature. The active agents, heat, light, electricity, &c., are regarded as varieties of energy, and the work is so arranged that their relation to one another, looked at in this light, and the paramount importance of the laws of energy, are clearly brought out. The volume contains all the necessary illustrations. The *Educational Times* calls this "the beau-ideal of a scientific text-book, clear, accurate, and thorough."

Thomson.—The DEPTHS of the SEA: an Account of the General Results of the Dredging Cruises of H.M.SS. *Porcupine* and *Lightning* during the Summers of 1868–69–70, under the scientific direction of Dr. Carpenter, F.R.S., J. Gwyn Jeffreys, F.R.S., and Dr. Wyville Thomson, F.R.S. By Dr. WYVILLE THOMSON, Director of the Scientific Staff of the *Challenger* Expedition. With nearly 100 Illustrations and 8 Coloured Maps and Plans. 8vo, cloth, gilt, 31*s*. 6*d*.

It was the results recorded in this volume that induced the Government to send out the great Expedition now launched under the scientific guidance of Dr. Wyville Thomson, which is spoken of as "the most important surveying expedition which has ever sailed from any country."

Thornton.—OLD-FASHIONED ETHICS, and COMMON-SENSE METAPHYSICS, with some of their Applications. By WILLIAM THOMAS THORNTON, Author of "A Treatise on Labour." 8vo, 10*s*. 6*d*.

The following are the contents of the volume :—I. Ante-Utilitarianism. II. History's Scientific Pretensions. III. David Hume as a Metaphysician. IV. Huxleyism. V. Recent Phases of Scientific Atheism. VI. Limits of Demonstrable Atheism.

Thudichum and Dupre.—A TREATISE on the ORIGIN, NATURE, and VARIETIES of WINE. Being a Complete Manual of Viticulture and Œnology. By J. L. THUDICHUM, M.D., and AUGUST DUPRÉ, Ph.D., Lecturer on Chemistry at Westminster Hospital. Medium 8vo, cloth gilt, 25*s*. With 85 Illustrative Woodcuts.

"A treatise almost unique for its usefulness either to the wine-grower, the vendor, or the consumer of wine. The analyses of wine are the most complete we have yet seen, exhibiting at a glance the constituent principles of nearly all the wines known in this country."—*Wine Trade Review.*

MACMILLAN & CO., LONDON.

WORKS IN PHYSICAL SCIENCE.

Kirchhoff (G.)—RESEARCHES on the SOLAR SPECTRUM, and the Spectra of the Chemical Elements. By G. KIRCHHOFF, Professor of Physics in the University of Heidelberg. Second Part. Translated, with the Author's sanction, from the Transactions of the Berlin Academy for 1862, by HENRY R. ROSCOE, B.A. Ph.D. F.R.S., Professor of Chemistry in Owen's College, Manchester. Part II. 4to, 5*s*.

"It is to Kirchhoff we are indebted for by far the best and most accurate observations of these phenomena."—*Edin. Review.* "This memoir seems almost indispensable to every spectrum observer."—*Philosophical Magazine.*

Lockyer (J. N.)—ELEMENTARY LESSONS in ASTRONOMY. With numerous Illustrations. By J. NORMAN LOCKYER, F.R.S. New Edition. 18mo, 5*s*. 6*d*.

The author has here aimed to give a connected view of the whole subject, and to supply facts, and ideas founded on the facts, to serve as a basis for subsequent study and discussion. The chapters treat of the Stars and Nebulæ; the Sun, the Solar System; the Apparent Movements of the Heavenly Bodies; the Measurement of Time; Light; the Telescope and Spectroscope; Apparent Places of the Heavenly Bodies; the Real Distances and Dimensions; Universal Gravitation. The most recent Astronomical Discoveries are incorporated. "The book is full, clear, sound, and worthy of attention, not only as a popular exposition, but as a scientific 'Index.'"—*Athenæum.* "The most fascinating of elementary books on the Sciences."—*Nonconformist.*

Macmillan (Rev. Hugh).—HOLIDAYS ON HIGH LANDS; or, Rambles and Incidents in search of Alpine Plants. Crown 8vo, cloth, 6*s*.

The aim of this book is to impart a general idea of the origin, character, and distribution of those rare and beautiful Alpine plants which occur on the British hills, and which are found almost everywhere on the lofty mountain chains of Europe, Asia, Africa, and America. In the first three chapters the peculiar vegetation of the Highland mountains is fully described; while in the remaining chapters this vegetation is traced to its northern cradle in the mountains of Norway, and to its southern European termination in the Alps of Switzerland. The information the author has to give is conveyed in a setting of personal adventure. "One of the most charming books of its kind ever written."—*Literary Churchman.* "Mr. M.'s glowing pictures of Scandinavian scenery."—*Saturday Review.*

FOOT-NOTES FROM THE PAGE OF NATURE. With numerous Illustrations. Fcap. 8vo, 5*s*.

"The naturalist and the botanist will delight in this volume, and those who understand little of the scientific parts of the work will linger over the mysterious page of nature here unfolded to their view."—*John Bull.*

Mansfield (C. B.)—A THEORY of SALTS. A Treatise on the Constitution of Bipolar (two-membered) Chemical Compounds. By the late CHARLES BLACKFORD MANSFIELD. Crown 8vo, 14*s*.

"Mansfield," says the editor, "wrote this book to defend the principle that the fact of voltaic decomposition afforded the true indication, if properly interpreted, of the nature of the saline structure, and of the atomicity of the elements that built it up. No chemist will peruse this book without feeling that he is in the presence of an original thinker, whose pages are continually suggestive, even though their general argument may not be entirely concurrent in direction with that of modern chemical thought."

Mivart (St. George).—Works by St. George Mivart, F.R.S., &c., Lecturer on Comparative Anatomy at St. Mary's Hospital:—

ON THE GENESIS OF SPECIES. Crown 8vo. Second Edition, to which notes have been added in reference and reply to Darwin's "Descent of Man." With numerous Illustrations, pp. xv. 296, 9*s*.

The aim of the author is to support the doctrine that the various species have been evolved by ordinary natural laws (for the most part unknown) controlled by the subordinate action of "natural selection," and at the same time to remind some that there is and can be absolutely nothing in physical science which forbids them to regard those natural laws as acting with the Divine concurrence, and in obedience to a creative fiat originally imposed on the primeval cosmos, "in the beginning," by its Creator, its Upholder, and its Lord. Nearly fifty woodcuts illustrate the letter-press, and a complete index makes all references extremely easy. Canon Kingsley, in his address to the "Devonshire Association," says, "Let me recommend earnestly to you, as a specimen of what can be said on the other side, the 'Genesis of Species,' by Mr. St. George Mivart, F.R.S., a book which I am happy to say has been received elsewhere as it has deserved, and, I trust, will be received so among you."

LESSONS IN ELEMENTARY ANATOMY. With upwards of 400 Illustrations, 18mo, 6*s*. 6*d*.

This volume is intended to form one of the series of Elementary Class-books of Science, and the Lessons are intended in the first place for teachers and for earnest students of both sexes, not already acquainted with human anatomy. The author has endeavoured, secondly, by certain additions and by the mode of treatment, to fit them for students in medicine, and generally for those acquainted with human anatomy, but desirous of learning its more significant relations to the structure of other animals: the author therefore hopes his volume may serve as a handbook of Human Morphology. The book is amply illustrated with carefully-drawn woodcuts.

Murphy.—Works by Joseph John Murphy:—

HABIT AND INTELLIGENCE, in Connection with the Laws of Matter and Force: a Series of Scientific Essays. Two Vols. 8vo. 16*s*.

The author's chief purpose in this work has been to state and to discuss what he regards as the special and characteristic principles of life. The most important part of the work treats of those vital principles which belong to the inner domain of life itself, as distinguished from the principles which belong to the border-land where life comes into contact with inorganic matter and force. In the inner domain of life we find two principles, which are, the author believes, co extensive with life and peculiar to it: these are Habit and Intelligence. He has made as full a statement as possible of the laws under which habits form, disappear, alter under altered circumstances, and vary spontaneously. He discusses that most important of all questions, whether intelligence is an ultimate fact, incapable of being resolved into any other, or only a resultant from the laws of habit. The latter part of the first volume is occupied with the discussion of the question of the Origin of Species. The first part of the second volume is occupied with an inquiry into the process of mental growth and development, and the nature of mental intelligence. In the chapter that follows the author discusses the science of history, and the three concluding chapters contain some ideas on the classification, the history, and the logic of the sciences. The author's aim has been to make the subjects treated of intelligible to any ordinary intelligent man.

ESSAYS AND ADDRESSES.
BY
PROFESSORS & LECTURERS OF OWENS COLLEGE, MANCHESTER.
Published in Commemoration of the Opening of the New College Buildings, October 7th, 1873.

CONTENTS.

OPENING ADDRESS. By the Duke of Devonshire, K.G. F.R.S., President of the Court of Governors.

"On some Relations of Culture to Practical Life." By J. G. Greenwood, Principal and Professor of Greek.

"Original Research as a Means of Education." By H. E. Roscoe, F.R.S., Professor of Chemistry.

"Solar Physics." By Balfour Stewart, F.R.S., Professor of Natural Philosophy.

"The Sun's Distance from the Earth." By T. H. Core, Professor of Natural Philosophy.

"The Limits of Geological Knowledge." By W. Boyd Dawkins, F.R.S., Curator of the Natural History Museum, and Lecturer in Geology and Palæontology.

"The Use of Steam." By Osborne Reynolds, Professor of Engineering.

"Primeval Vegetation in its Relation to the Doctrines of Natural Selection and Evolution." By W. C. Williamson, F.R.S., Professor of Natural History.

"Science and Medicine." By A. Gamgee, F.R.S., Professor of Practical Physiology and Histology.

"Some Historical Results of the Science of Language." By A. S. Wilkins, Professor of Latin and Comparative Philology.

"The Talmud." By T. Theodores, Professor of Oriental and Modern Languages.

"Provencal Poetry in Old and Modern Times." By H. Breymann, Lecturer on French Language and Literature.

"The Recent Reorganisation of the English Law Courts, in its Relation to their Past History." By J. Bryce, D.C.L., Professor of Jurisprudence and Law.

"The Railways and the State." By W. Stanley Jevons, F.R.S., Professor of Logic, and Mental and Moral Philosophy, and Political Economy.

"The Peace of Europe." By A. W. Ward, Professor of English and History.

7, Savile Row, Piccadilly, W.

NATURAL SCIENCE MASTERSHIP WANTED after July 31 next by a Graduate of Cambridge, in a first-rate Grammar School. The highest testimonials —Address, M A, care of Nature, 29, Bedford Street, Covent Garden, London, W C.

PRIVATE TUITION.—A Clergyman, of long experience and uniform success in Tuition, RECEIVES FOUR PUPILS. Home comforts combined with great educational advantages. The highest references.—M A., care of Editor of NATURE, 29, Bedford Street, Strand, W.C.

SCIENCE TUITION by CORRESPONDENCE.—For Terms, apply to D.C.L., care of Macmillan & Co., 29, Bedford Street, Strand, London, W.C.

The REV. L. HENSLEY, Vicar of Hitchin, Herts, formerly Fellow and Assistant Tutor of Trinity College, Cambridge, receives several Pupils to prepare for the Universities.

A LADY requires a RE-APPOINTMENT. German, French, the Elements of Natural Science, together with all the usual branches of Education Highest References can be given.—Address, M.A.H., care of the Publishers of NATURE, 29, Bedford Street, Covent Garden, W C.

A YOUNG LADY seeks a RE-ENGAGEMENT as GOVERNESS in London. She is capable of teaching the rudiments of NATURAL SCIENCE, and has a thorough knowledge of French, German, and the usual branches of a sound English Education. Address, Miss K., NATURE Office, 29, Bedford Street, Strand, W C.

SCIENCE TUITION by CORRESPONDENCE—Subjects: Botany, Elementary Chemistry, and Practical Use of the Microscope.—For terms, &c., address H., care of Macmillan and Co., 29, Bedford Street, Strand, London, W.C.

MICROSCOPE by Smith and Beck for Sale, with sub-stage, three eye-pieces, best objectives, and a quantity of expensive accessories. The whole in Mahogany Cabinet, and cost £50 To be sold for £28. Apply by letter to R. B., care of Macmillan & Co. 29, Bedford Street, Covent Garden, W.C.

TO NATURALISTS and GEOLOGISTS.—Fossils from the Cutting in the Crag near Orford Castle (see Advertisement in NATURE, May 14th). Twenty Collections each of Fifty Species have now been delivered to subscribers Each species is sent in a glass-capped box with a printed label in the following style:—

Nassa granulata
Red Crag, near Orford Castle.

Trophon alveolatum
Coralline Crag, near Orford Castle.

Particulars may now be had by addressing (with stamped envelope) Fredc. Collingwood, Esq. F.G.S. 4, St. Martin's Place, Trafalgar Square. On receipt of twelve stamps, 4 choice specimens from the Orford Castle Cutting of Nassa granulata, 3 of Trophon muricatum, 2 of Tectura virginea, and 1 of Emarginula fissura, will be forwarded in a secure postal-box.

NOTICE.—To Science Classes.—MOTTERSHEAD AND CO., LABORATORY FURNISHERS, EXCHANGE STREET, MANCHESTER, supply all the Apparatus enumerated in the SOUTH KENSINGTON LISTS FOR THE USE OF TEACHERS OF PHYSICAL SCIENCE (Light, Heat, Electricity, Magnetism, &c.), and will be happy to show intending purchasers specimens of the various Instruments, or to forward Estimates on application. Orders exceeding £2 in value delivered free to any railway station in England.

TRUSSES (Self-adjusting), in use for the last sixty years, and same as worn by his late Majesty William IV. From 10s. each. SALMON ODY & CO., by appointment to the Army and Navy, 292, Strand, London Price List post free.

CHEST EXPANDER and TROUSERS BRACE combined, 8s.; Ladies' Chest Expanders from 5s. 6d. SALMON ODY & CO, 292, Strand, London. Established 1806.

ELASTIC STOCKINGS for Varicose Veins or Weak Joints, and LADIES' ABDOMINAL BELTS, made to any size. Directions for self-measurement and prices post free. SALMON ODY & CO., 292, Strand, London

This day, in 8vo, price 14s., with Woodcuts.

ETRUSCAN RESEARCHES. By Isaac TAYLOR, M.A. With Glossary and Index.

CONTENTS:—The Prologue—Tyrrhenians and Turanians—Ethnographical Notes on the Etruscan People—The Etruscan Mythology—The Etruscan Numerals—Epitaphs—Words denoting Kinship—The Bilingual Inscriptions—Forms of Dedication—The Ancient Vocabularies—Names—The Epilogue.

London: MACMILLAN & CO

THE ONLY CHEAP FARMERS' NEWSPAPER.

THE CHAMBER OF AGRICULTURE JOURNAL AND FARMERS' CHRONICLE,

Edited by JOHN ALGERNON CLARKE, Secretary to the Central Chamber of Agriculture,

Devotes special attention to the discussions and proceedings of the Chambers of Agriculture of Great Britain (which now number upwards of 18,000 members), besides giving original papers on practical farming, and a mass of intelligence of particular value to the agriculturist.

The London Corn, Seed, Hop, Cattle, and other Markets of Monday are specially reported in this Journal, which is despatched the same evening so as to insure delivery to country subscribers by the first post on Tuesday morning. Price 3d., or prepaid, 15s. a year post free.

Published by W. PICKERING, 22, Arundel Street, Strand, W.C.

"THE GARDEN,"

A Weekly Illustrated Journal devoted solely to Horticulture in all its Branches.

"THE GARDEN" is conducted by WILLIAM ROBINSON, F.L.S., Author of "Hardy Flowers," "Alpine Flowers for English Gardens," "The Parks, Promenades, and Gardens of Paris," &c.; and the best Writers in every Department of Gardening are contributors to its pages.

The following are some of the subjects regularly treated of in its pages:—

The Flower Garden.
Landscape Gardening.
The Fruit Garden.
Garden Structures.
Room and Window Gardens.
Notes and Questions.
Market Gardening.
Trees and Shrubs.
Hardy Flowers.
Town Gardens.
The Conservatory.
Public Gardens.
The Greenhouse and Stove.
The Household
The Wild Garden.
The Kitchen Garden.

"THE GARDEN" may be obtained through all Newsagents and at the Railway Bookstalls, at 4d. per Copy. It may also be had direct from the Office at 5s. for a Quarter, 9s. 9d. for a Half-year, and 10s. 6d. for a Year, payable in advance, and in Monthly Parts. Specimen Copies (post-free), 4½d.

37, Southampton Street, Covent Garden, S.W.

THE JOURNAL OF APPLIED CHEMISTRY,

A MONTHLY PUBLICATION OF 16 PAGES QUARTO,

Devoted to Chemistry as applied to Arts and Manufactures, Agriculture Metallurgy, &c. &c.

At Two Dollars and Twenty-five Cents per annum, or One Dollar and Seventy-five Cents paid strictly in advance, including postage to United Kingdom.

Each number contains Original Articles on General Chemistry applied to Arts and Manufactures; Matter on Particular Fabrications, as Petroleum, Soaps, Tanning, Dyeing, and numerous others.

A suitable space is also devoted to Practical Recipes and interesting Scientific Facts

Full and carefully-prepared Market Reviews and Prices Current of Drugs and Chemicals of every description are given in each number for New York, Boston, and Philadelphia, with Tables of Imports.

EIGHTH VOLUME, commenced with January number.

DEXTER & CO., PUBLISHERS,
Spruce Street, New York; 48, Hanover Street, Boston; and 149, South 4th Street, Philadelphia, Pa., U.S.A.

THE ENTOMOLOGIST'S MONTHLY MAGAZINE.

Price Sixpence, monthly, 24 pages 8vo., with occasional Illustrations. Conducted by J W. DOUGLAS, R. MCLACHLAN, F.L.S., E. C. RYE, and H. T. STAINTON, F.R S., &c.

This Magazine, commenced in 1864, contains standard articles and notes on all subjects connected with Entomology, and especially on the Insects of the British Isles.

Subscription—Six Shillings per Volume, post-free. The volumes commence with the June number in each year.

Vols. I. to V. (strongly bound in cloth) may be obtained by purchasers of the entire set to date, at the increased price of 10s each; the succeeding vols. may be had separately or together at 7s. each.

London. JOHN VAN VOORST, 1, Paternoster Row.

N.B.—Communications, &c., should be sent to the Editors at the above address.

Nearly opposite Aldersgate Street Station, Metropolitan Railway, near the General Post Office.

JUDSON'S DYES.—18 Colours, 6d. each.

RIBBONS, WOOL, SILK, FEATHERS,

Completely dyed in 10 minutes without soiling the hands.

Full Instructions supplied. Of all Chemists and Stationers.

JUDSON'S DYES.—Dyeing at Home.—JUDSON'S simple DYES are most useful and effectual. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES. Beautiful effects are thus produced in green, pink, brown, and many other colours—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES.—Ferns, Grasses, Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c., by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed.

JUDSON'S DYES.—Ink—Ink—Ink.—A Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water.

JUDSON'S DYES.—For Colouring Architectural Plans, &c.—Much trouble may be saved in grinding up colours to a uniform tint. They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades.

JUDSON'S DYES.—For Staining Wood.—Diluted with Water. They sink deeply into the fibre, and will not rub off. They form the most economical stain on record. Light Brown for mahogany colour is excellent; No. 2 Black for walnut; Canary for satin; also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE

Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

THE BREWERS' GUARDIAN:

POPULAR ASTRONOMY. By G. B. AIRY, Astronomer Royal. With Illustrations. Sixth and Cheaper Edition. 18mo, cloth, 4s. 6d.

"Popular Astronomy in general has many manuals, but none of them supersede the Six Lectures of the Astronomer Royal under that title. Its speciality is the direct way in which every step is referred to the observatory, and in which the methods and instruments by which every observation is made are fully described. This gives a sense of solidity and substance to astronomical statements which is obtainable in no other way."—*Guardian.*

MACMILLAN & CO., LONDON

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS

is allowed by upwards of 500 Medical Men to be the most effective invention in the curative treatment of Hernia. The use of a steel spring, so often hurtful in its effects, is here avoided; a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, 2 inches below the hips, being sent to the manufacturer,

JOHN WHITE, 228, Piccadilly.

Price of a Single Truss, 16s., 21s., 26s. 6d., and 31s. 6d.
" Double " 31s. 6d., 42s., and 52s. 6d.
" Umbilical " 42s. and 52s. 6d.
} Post-free.

ELASTIC STOCKINGS, KNEE-CAPS,

&c., for Varicose Veins and all cases of weakness and Swellings of the Legs, Sprains, &c. They are porous, light in texture, and inexpensive, and drawn on over an ordinary stocking. Price 4s. 6d., 7s. 6d., 10s., and 16s. each. Postage free.

JOHN WHITE, Manufacturer, 228, Piccadilly, London.

This day is published.

TELEGRAPH AND TRAVEL.

A NARRATIVE of the FORMATION and DEVELOPMENT of TELEGRAPHIC COMMUNICATION between ENGLAND and INDIA, under the Orders of Her Majesty's Government, with incidental Notices of the Countries through which the Lines pass.

By COLONEL SIR FREDERIC GOLDSMID, C.B., K.C.S.I.,

Late Director of the Government Indo-European Telegraph.

With numerous Illustrations and Maps. 8vo.

MACMILLAN & CO., LONDON.

ZOOLOGICAL SOCIETY'S LATEST PUBLICATIONS.

"Proceedings of the Scientific Meetings of the Society for 1874."—Part I, containing the Papers read at the Scientific Meetings in January and February, 1874. With 25 Plates, mostly coloured, 12*s.* : with Plates, uncoloured, 3*s.*

Index to the Proceedings of the Zoological Society from 1830 to 1847, from 1848 to 1860, and from 1861 to 1870, in three volumes. Price 6*s.* each volume.

NOTICE.

Commencing from January of the present year the "Proceedings" will be issued in four Parts, as follows :—

Part I., containing Papers read in January and February, on June 1st.
" II., " " March and April, on August 1st.
" III., " " May and June, on October 1st
" IV., " " November and December, on April 1st.

The price will be 12*s.* per Part for the Edition with coloured, and 3*s.* per Part for that with uncoloured Plates.

TRANSACTIONS OF THE SOCIETY.

Vol. VIII., Part 7, price 22*s.* Containing :—

Mr. ST. GEORGE MIVART, F.R.S.—"On the Axial Skeleton of the Ostrich" (*Struthio camelus*). (79 woodcuts.)

Vol. VIII., 8, price 24*s.* Containg the following Papers :—

"On the Osteology and Dentition of *Hylomys*." By JOHN ANDERSON, M.D., Curator of the Indian Museum, and Professor of Comparative Anatomy in the Medical College, Calcutta.

"Report on the Hydroida collected during the Expeditions of H.M.S. *Porcupine*." By Professor G. J. ALLMAN, F.R.S.

"On the Osteology of the *Marsupialia*. (Part IV.) Bones of the trunk and limbs, *Phascolomys*." By Professor OWEN, C.B. F.R.S. F.Z.S.

These publications may be obtained at the Society's Office, 11, Hanover Square, W.; at Messrs. Longmans, the Society's Publishers, Paternoster Row, E.C.; or through any bookseller.

RICHARD CONGREVE'S ESSAYS.

Just published, in 1 vol. 8vo, cloth, price 18*s.*

ESSAYS, POLITICAL, SOCIAL, and RELIGIOUS.

By RICHARD CONGREVE, M.A. M.R.C.P.L., formerly Fellow and Tutor of Wadham College, Oxford.

List of the Essays :—Gibraltar—India—Italy and the Western Powers—The West—Mr. Broadhead and the Anonymous Press—Ireland—The Ashantee War—Mr. Huxley on M. Comte—The New Religion in its Attitude towards the Old—The Propagation of the Religion of Humanity—Le Culte des Morts—Systematic Policy—Education—Moral and Social Questions connected with our Indian Empire—L'Union des Prolétariats Anglais et Français—The Combination of France and England—The Settlement of France—with some minor pieces.

London : LONGMANS, GREEN, & CO., Paternoster Row.

Third Edition, royal 8vo, cloth extra, 21*s.*

SPECTRUM ANALYSIS. By Professor ROSCOE, F.R.S.

With Appendices, Engravings, Maps, and Chromo-lithographs.

"The illustrations—no unimportant part of a book on such a subject—are marvels of wood-printing, and reflect the clearness which is the distinguishing merit of Mr. Roscoe's explanations."—*Saturday Review.*

"The lectures themselves furnish a most admirable elementary treatise on the subject, whilst by the insertion in appendices to each lecture of extracts from the most important published memoirs, the author has rendered it equally valuable as a text-book for advanced students."—*Westminster Review.*

MACMILLAN & CO., LONDON.

ECLIPSES PAST and FUTURE, with GENERAL HINTS for OBSERVING the HEAVENS.

By Rev. S. J. JOHNSON, F.R.A.S. Part I. An Account of Eclipses from the earliest times to the present, future eclipses, &c. Part II. A Description of Celestial Objects worth observing with a small telescope. 4*s.*

CONTRIBUTIONS to SOLAR PHYSICS.

By J. NORMAN LOCKYER, F R S. I. A Popular Account of Inquiries into the Physical Constitution of the Sun, with especial reference to Recent Spectroscopic Researches. II Communications to the Royal Society of London and the French Academy of Sciences, with Notes. Illustrated by 7 Coloured Lithographic Plates and 175 Woodcuts

"The first part of the work, presenting the reader with a continuous sketch of the history of the various inquiries into the physical constitution of the sun, cannot fail to be of interest to all who care for the revelations of modern science, and the interest will be enhanced by the excellence of the numerous illustrations by which it is accompanied"—*Athenæum*.

"The book may be taken as an authentic exposition of the present state of science in connexion with the important subject of spectroscopic analysis. . . Even the unscientific public may derive much information from it" —*Daily News*.

London: MACMILLAN & CO.

HOLLOWAY'S OINTMENT and PILLS.

—For the cure of burns, scalds, wounds, and ulcers, this justly celebrated Ointment stands unrivalled Its balsamic virtues immediately on application lull the pain and smarting, protect the exposed nerves from the air, give to the vessels the vigour necessary to heal the sore, and confer on the blood a purity which permits it only to lay down healthy flesh in the place of that destroyed. Holloway's Pills simultaneously taken much assist the Ointment's purifying and soothing power Together, these medicaments act like a charm Travellers embarking for unwholesome climates, where pestilential airs are constantly producing fever, should provide themselves with these remedies, which will assuredly save them nights of weary watching and days of pain.

WORKS IN PHYSICAL SCIENCE.

Wallace (A. R.)—CONTRIBUTIONS to the THEORY of NATURAL SELECTION. A Series of Essays. By ALFRED RUSSEL WALLACE, Author of "The Malay Archipelago," &c. Second Edition, with Corrections and Additions. Crown 8vo. 8*s*. 6*d*.

"He has combined an abundance of fresh and original facts with a liveliness and sagacity of reasoning which are not often displayed so effectively on so small a scale."—*Saturday Review*. The Essays in this volume are:—I. "On the Law which has regulated the introduction of New Species." II. "On the Tendencies of Varieties to depart indefinitely from the Original Type." III. "Mimicry, and other Protective Resemblances among Animals." IV. "The Malayan Papilionidæ, as illustrative of the Theory of Natural Selection." V. "On Instinct in Man and Animals." VI. "The Philosophy of Birds' Nests." VII. "A Theory of Birds' Nests." VIII. "Creation by Law." IX. "The Development of Human Races under the Law of Natural Selection." X. "The Limits of Natural Selection as applied to Man."

Warington.—THE WEEK of CREATION; OR, THE COSMOGONY OF GENESIS CONSIDERED IN ITS RELATION TO MODERN SCIENCE. By GEORGE WARINGTON, Author of "The Historic Character of the Pentateuch Vindicated." Crown 8vo. 4*s*. 6*d*.

The greater part of this work is taken up with the teaching of the Cosmogony. Its purpose is also investigated, and a chapter is devoted to the consideration of the passage in which the difficulties occur. "A very able vindication of the Mosaic Cosmogony, by a writer who unites the advantages of a critical knowledge of the Hebrew text and of distinguished scientific attainments."—*Spectator*.

Wilson.—Works by the late George Wilson, M.D., F.R.S.E., Regius Professor of Technology in the University of Edinburgh:—

RELIGIO CHEMICI. With a Vignette beautifully engraved after a design by Sir Noel Paton. Crown 8vo. 8*s*. 6*d*.

"George Wilson," says the Preface to this volume, "had it in his heart for many years to write a book corresponding to the *Religio Medici* of Sir Thomas Browne, with the title *Religio Chemici*. Several of the Essays in this volume were intended to form chapters of it. These fragments being in most cases like finished gems waiting to be set, some of them are now given in a collected form to his friends and the public. In living remembrance of his purpose, the name chosen by himself has been adopted, although the original design can be but very faintly represented." The Contents of the volume are:—"Chemistry and Natural Theology." "The Chemistry of the Stars; an Argument touching the Stars and their Inhabitants." "Chemical Final Causes; as illustrated by the presence of Phosphorus, Nitrogen, and Iron in the Higher Sentient Organisms." "Robert Boyle." "Wollaston." "Life and Discoveries of Dalton." "Thoughts on the Resurrection; an Address to Medical Students." The *Freeman* says: "These papers are all valuable and deeply interesting. The production of a profound thinker, a suggestive and eloquent writer, and a man whose piety and genius went hand in hand."

THE PROGRESS OF THE TELEGRAPH. Fcap. 8vo. 1*s*.

"While a complete view of the progress of the greatest of human inventions is obtained, all its suggestions are brought out with a rare thoughtfulness, a genial humour, and an exceeding beauty of utterance."—*Nonconformist*.

Wilson (Daniel).—CALIBAN: The MISSING LINK. By DANIEL WILSON, LL.D., Pofessor of History and English Literature in University College, Toronto. 8vo, 10*s*. 6*d*.

In the present state of the controversy as to the origin of man, this work of a competent scholar and critic, in which the Monster Caliban is studied from various points of view, will be of considerable interest. Besides "Caliban," the work treats of various other matters of Shakespearian interest, as "The Supernatural," "Ghosts and Witches," "Fairy Folk-Lore," "The Commentators," "The Folios." The two last chapters contain notes on "The Tempest," and "A Midsummer Night's Dream."

Winslow.—FORCE and NATURE: ATTRACTION and REPULSION. The Radical Principles of Energy graphically discussed in their Relations to Physical and Morphological Development. By C. F. WINSLOW, M.D. 8vo, 14*s*.

The author having for long investigated Nature in many directions, has ever felt unsatisfied with the physical foundations upon which some branches of science have been so long compelled to rest. The question, he believes, must have occurred to many astronomers and physicists whether some subtle principle antagonistic to attraction does not also exist as an all-pervading element in nature, and so operate as in some way to disturb the action of what is generally considered by the scientific world a *unique* force. The aim of the present work is to set forth this subject in its broadest aspects, and in such a manner as to invite thereto the attention of the learned. The subjects of the eleven chapters are:—I. Space. II. Matter. III. Inertia, Force, and Mind. IV. Molecules. V. Molecular Force. VI. Union and Inseparability of Matter and Force. VII. and VIII. Nature and Action of Force—Attraction—Repulsion. IX. Cosmical Repulsion. X. Mechanical Force. XI. Central Forces and Celestial Physics.

Wurtz.—A HISTORY OF CHEMICAL THEORY, from the Age of Lavoisier down to the present time. By AD. WURTZ. Translated by HENRY WATTS, F.R.S. Crown 8vo, 6*s*.

"The discourse, as a *résumé* of chemical theory and research, unites singular luminousness and grasp. A few judicious notes are added by the translator."—*Pall Mall Gazette*.

Guillemin.—The FORCES of NATURE: A Popular Introduction to the Study of Physical Phenomena. By AMEDEE GUILLEMIN. Translated from the French by MRS. NORMAN LOCKYER; and Edited, with Additions and Notes, by J. NORMAN LOCKYER, F.R.S. Illustrated by 11 Coloured Plates and 455 Woodcuts. Second Edition. Imperial 8vo, cloth, extra gilt, 31*s*. 6*d*.

"Translator and Editor have done justice to their trust. The text has all the force and flow of original writing, combining faithfulness to the author's meaning with purity and independence in regard to idiom; while the historical precision and accuracy pervading the work throughout speak of the watchful editorial supervision which has been given to every scientific detail. Nothing can well exceed the clearness and delicacy of the illustrative woodcuts, borrowed from the French edition, or the purity and chromatic truth of the coloured plates. Altogether the work may be said to have no parallel, either in point of fulness or attraction, as a popular manual of physical science. . . . . What we feel, however, bound to say, and what we say with pleasure, is, that among works of its class no publication can stand comparison either in literary completeness or in artistic grace with it."—*Saturday Review*.

MACMILLAN & CO., LONDON.

Now Ready. Price One Shilling.

ART

PICTORIAL AND INDUSTRIAL: A REVIEW.

FOR JUNE 1874.

WITH CHOICE EXAMPLES FROM VARIOUS SOURCES,

REPRODUCED BY THE HELIOTYPE AND OTHER PERMANENT PROCESSES.

Edited by JOHN FORBES-ROBERTSON.

"ARS ARTIS CAUSÂ, ITAQUE HOMINIS."

CONTENTS OF JUNE NUMBER—Our Illustrations :—1. "An Italian Beauty," by A. Boulard. 2. "The Pet Dog," by Verwée. 3. "The Oak," by G. Courbet.—Cut Metal Work and Printed Tin-Foil Decorations.—The Exhibitions.—Art Notes and Gossip.

SPECIAL NOTICE.—The Publishers take the present opportunity of informing the Readers of "Art" that fresh arrangements have been entered into for the reproduction in the forthcoming Numbers of choice examples of Painting, Engraving, Sculpture, Pottery, and Art objects generally. These will be representative both of British and Continental Schools.

N.B.—Artists and those connected with Artistic manufacture wishing their works to be reproduced in the pages of "Art," are requested to communicate with the Editor, through the Publishers.

ESSAYS AND ADDRESSES.

BY

PROFESSORS & LECTURERS OF OWENS COLLEGE, MANCHESTER.

Published in Commemoration of the Opening of the New College Buildings, October 7th, 1873.

CONTENTS.

OPENING ADDRESS. By the Duke of Devonshire, K.G. F.R.S., President of the Court of Governors.

"On some Relations of Culture to Practical Life." By J. G. Greenwood, Principal and Professor of Greek.

"Original Research as a Means of Education." By H. E. Roscoe, F.R.S., Professor of Chemistry.

"Solar Physics." By Balfour Stewart, F.R.S., Professor of Natural Philosophy.

"The Sun's Distance from the Earth." By T. H. Core, Professor of Natural Philosophy.

"The Limits of Geological Knowledge," By W. Boyd Dawkins, F.R.S., Curator of the Natural History Museum, and Lecturer in Geology and Palæontology.

"The Use of Steam." By Osborne Reynolds, Professor of Engineering.

"Primeval Vegetation in its Relation to the Doctrines of Natural Selection and Evolution." By W. C. Williamson, F.R.S., Professor of Natural History.

"Science and Medicine." By A. Gamgee, F.R.S., Professor of Practical Physiology and Histology.

"Some Historical Results of the Science of Language." By A. S. Wilkins, Professor of Latin and Comparative Philology.

"The Talmud." By T. Theodores, Professor of Oriental and Modern Languages.

"Provencal Poetry in Old and Modern Times." By H. Breymann, Lecturer on French Language and Literature.

"The Recent Reorganisation of the English Law Courts, in its Relation to their Past History." By J. Bryce, D.C.L., Professor of Jurisprudence and Law.

"The Railways and the State." By W. Stanley Jevons, F.R.S., Professor of Logic, and Mental and Moral Philosophy, and Political Economy.

"The Peace of Europe." By A. W. Ward, Professor of English and History.

BRYANT & MAY'S

MATCHES.

THE ZOOLOGIST.

A MONTHLY JOURNAL OF NATURAL HISTORY.

Conducted by EDWARD NEWMAN, F.L.S. F.Z.S. &c.

The Zoologist was established in 1843 to record and preserve observations on subjects similar to those treated of in White's "Natural History of Selborne," and the success which has attended it is sufficient proof that its plan is acceptable to "out-of-door naturalists," those who delight in observing the manners, habits, the private lives, the migrations, movements, nests, young and food of animals. It contains original papers and records of facts relating to Quadrupeds, Birds, Reptiles, Fishes, and Insects, together with notices of recent works on every branch of Natural History The editor has been assisted by more than two hundred of our very best zoologists.

Published on the First of every Month.

PRICE ONE SHILLING.

London : JOHN VAN VOORST, 1, Paternoster Row.

MACMILLAN & CO.'S

GOLDEN TREASURY SERIES.

Uniformly Printed in 18mo., with Vignette Titles by Sir Noel Paton, T. Woolner, W. Holman Hunt, J. E. Millais, Arthur Hughes, &c. Engraved on Steel by Jeens. Bound in extra cloth, 4*s.* 6*d.* each volume. Also kept in morocco and calf bindings.

"*Messrs. Macmillan have, in their Golden Treasury Series, especially provided editions of standard works, volumes of selected poetry, and original compositions, which entitle this series to be called classical. Nothing can be better than the literary execution, nothing more elegant than the material workmanship.*"—British Quarterly Review.

The Golden Treasury of the Best Songs and Lyrical Poems in the English Language. Selected and arranged, with Notes, by Francis Turner Palgrave.

"*This delightful little volume, the Golden Treasury, which contains many of the best original lyric pieces and songs in our language, grouped with care and skill, so as to illustrate each other like the pictures in a well-arranged gallery.*"—Quarterly Review.

The Children's Garland from the best Poets. Selected and arranged by Coventry Patmore.

"*It includes specimens of all the great masters in the art of poetry, selected with the matured judgment of a man concentrated on obtaining insight into the feelings and tastes of childhood, and desirous to awaken its finest impulses, to cultivate its keenest sensibilities.*"—Morning Post.

The Book of Praise. From the best English Hymn Writers. Selected and arranged by Sir Roundell Palmer. A New and Enlarged Edition.

The Fairy Book; the best Popular Fairy Stories. Selected and rendered anew by the Author of "John Halifax, Gentleman."

"*A delightful selection, in a delightful external form; full of the physical splendour and vast opulence of proper fairy tales.*"—Spectator.

The Ballad Book. A Selection of the Choicest British Ballads. Edited by William Allingham.

"*His taste as a judge of old poetry will be found, by all acquainted with the various readings of old English ballads, true enough to justify his undertaking so critical a task.*"—Saturday Review.

The Jest Book. The Choicest Anecdotes and Sayings. Selected and arranged by Mark Lemon.

"*The fullest and best jest book that has yet appeared.*"—Saturday Review.

Bacon's Essays and Colours of Good and Evil. With Notes and Glossarial Index. By W. Aldis Wright, M.A.

The Pilgrim's Progress from this World to that which is to come. By John Bunyan.

"*A beautiful and scholarly print.*"—Spectator.

The Sunday Book of Poetry for the Young. Selected and arranged by C. F. Alexander.

"*A well-selected volume of sacred poetry.*"—Spectator.

A Book of Golden Deeds of all Times and all Countries. Gathered and narrated anew. By the Author of "The Heir of Redclyffe."

The Poetical Works of Robert Burns. Edited, with Biographical Memoir, Notes, and Glossary, by Alexander Smith. Two vols.

The Adventures of Robinson Crusoe. Edited from the Original Edition by J. W. Clark, M.A., Fellow of Trinity College, Cambridge.

The Republic of Plato. Translated into English, with Notes by J. Ll. Davies, M.A., and D. J. Vaughan, M.A.

The Song Book. Words and Tunes from the best Poets and Musicians. Selected and arranged by John Hullah, Professor of Vocal Music in King's College, London.

La Lyre Française. Selected and arranged, with Notes, by Gustave Masson, French Master in Harrow School.

Tom Brown's School Days. By An Old Boy.

A Book of Worthies. Gathered from the Old Histories and written anew by the Author of "The Heir of Redclyffe."

MACMILLAN & CO., LONDON.

Printed by R. Clay, Sons, & Taylor, at 7 and 8, Bread Street Hill, in the City of London, and published by Macmillan & Co. at the Office, 29 and 30, Bedford Street, Covent Garden.—Thursday, June 18, 1874.

C. WILLMORE, Principal.

BRITISH ASSOCIATION for the ADVANCEMENT OF SCIENCE,

22, Albemarle Street, London, W.

The NEXT ANNUAL GENERAL MEETING will be held at BELFAST, commencing on WEDNESDAY, August 19

President-Elect,

Professor TYNDALL, D.C L. LL D. F.R.S. F.C.S.

NOTICE TO CONTRIBUTORS OF MEMOIRS.—Authors are reminded that, under an arrangement dating from 1871, the acceptance of Memoirs, and the days on which they are to be read, are now, as far as possible, determined by Organising Committees for the several Sections before the beginning of the Meeting. It has therefore become necessary, in order to give an opportunity to the Committees of doing justice to the several communications, that each Author should prepare an Abstract of his Memoir, of a length suitable for insertion in the published Transactions of the Association, and that he should send it, together with the original Memoir, by book-post, on or before August 1, addressed thus:—"General Secretaries, British Association, 22, Albemarle Street, London, W. For Section ." If it should be inconvenient to the Author that his paper should be read on any particular day, he is requested to send information thereof to the Secretaries in a separate note.

G. GRIFFITH, M A,
Assistant General Secretary, Harrow.

PHYSICAL GEOGRAPHY.—The PROFESSORSHIP is now VACANT in the Bedford College (for Ladies),

48 and 49, Bedford Square, London (In October the College will be removed to Nos. 8 and 9, York Place, Portman Square.) Applications are invited. Information may be obtained from the hon. sec. at the College.

JANE MARTINEAU, Hon Sec

ROYAL COUNCIL OF EDUCATION.—

The Laboratory and Class-rooms of Berners College are open for Pupils EVERY DAY and EVENING. The subjects of the above Examinations can be studied either Privately or in Classes. Fees moderate. Analyses and investigations conducted.—Apply to Prof. E. V. GARDNER, F.E.S., F.S.A., 44, Berners Street, W

EDUCATION AT ZURICH.—Mr. DE BAUDISS,

formerly one of the Assistant Masters at Wellington College, receives a limited number of PUPILS, and will have vacancies in October The house is healthily situated, and the style of living is arranged to suit English habits. Mr. de Baudiss is assisted by competent Masters, and is able to offer, in addition to French and German and the usual subjects of a liberal education, special facilities for the study of Physical and Mechanical Science Advanced Pupils have the opportunity of attending the Lectures of the Polytechnic School, on Engineering, Agriculture, and other branches of Applied Science.—For terms and references apply to F de Baudiss, Wiesenstrasse, Seefeld Zurich.

READING SCHOOL.—A Natural Science MASTER will be required in September.—Apply, stating full particulars, to Rev. W. Stokoe, Reading.

PRIVATE TUITION.—A Clergyman, of long experience and uniform success in Tuition, RECEIVES FOUR PUPILS Home comforts combined with great educational advantages. The highest references —M.A., care of Editor of NATURE, 29, Bedford Street, Strand, W.C.

SCIENCE TUITION by CORRESPONDENCE.—For Terms, apply to D.C L., care of Macmillan & Co., 29, Bedford Street, Strand, London, W.C

A LADY requires a RE-APPOINTMENT. German, French, the Elements of Natural Science, together with all the usual branches of Education. Highest References can be given —Address, M.A H., care of the Publishers of NATURE, 29, Bedford Street, Covent Garden, W C.

SCIENCE TUITION by CORRESPONDENCE.—Subjects: Botany, Elementary Chemistry, and Practical Use of the Microscope —For terms, &c, address H., care of Macmillan and Co., 29, Bedford Street, Strand, London, W C.

MICROSCOPE by Smith and Beck for Sale, with sub-stage, three eye-pieces, best objectives, and a quantity of expensive accessories The whole in Mahogany Cabinet, and cost £50 To be sold for £28. Apply by letter to R B., care of Macmillan & Co. 29, Bedford Street, Covent Garden, W C

TO NATURALISTS and CURATORS of MUSEUMS.—Sale of Valuable Osteological Specimens A Collection of very choice Osteological Specimens, including an admirably prepared Skeleton of a large Boa in glass case, with Crania of Tapir, Hippopotamus, Walrus, &c., and a variety of Preparations suited for Museums and Science Teachers, will be sold by auction on Monday next, the 29th of June, at 13, Wellington Street, Strand, by Messrs Sotheby, Wilkinson, and Hodge, of whom Catalogues may be had. A Cabinet of Choice Fossils and a valuable Collection of Minerals will be sold at the same time.

NOTICE.—To Science Classes.—MOTTERSHEAD AND CO., LABORATORY FURNISHERS, EXCHANGE STREET, MANCHESTER, supply all the Apparatus enumerated in the SOUTH KENSINGTON LISTS FOR THE USE OF TEACHERS OF PHYSICAL SCIENCE (Light, Heat, Electricity, Magnetism, &c.), and will be happy to show intending purchasers specimens of the various Instruments, or to forward Estimates on application. Orders exceeding £2 in value delivered free to any railway station in England.

TRUSSES (Self-adjusting), in use for the last sixty years, and same as worn by his late Majesty William IV. From 10s. each. SALMON ODY & CO., by appointment to the Army and Navy, 292, Strand, London. Price List post free.

45, Cornhill, 122, Regent Street, and Crystal Palace, Sydenham, London.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS

Is allowed by upwards of 500 Medical Men to be the most effective invention in the curative treatment of Hernia. The use of a steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, 2 inches below the hips, being sent to the manufacturer,

JOHN WHITE, 228, Piccadilly.

Price of a Single Truss, 16s., 21s., 26s. 6d., and 31s. 6d.
" Double " 31s. 6d., 42s., and 52s. 6d.
" Umbilical " 42s. and 52s. 6d.
Post-free.

ELASTIC STOCKINGS, KNEE-CAPS, &c., for Varicose Veins and all cases of weakness and Swellings of the Legs, Sprains, &c. They are porous, light in texture, and inexpensive, and drawn on over an ordinary stocking. Price 4s. 6d., 7s. 6d., 10s., and 16s. each. Postage free.

London. MACMILLAN & CO

Second Edition, royal 8vo, cloth extra, 31*s*. 6*d*.

The FORCES of NATURE: a Popular Introduction to the Study of Physical Phenomena. By AMEDEE GUILLEMIN. Translated from the French by MRS. NORMAN LOCKYER, and Edited, with Additions and Notes, by J NORMAN LOCKYER, F.R.S. Illustrated by 11 Coloured Plates and 455 Woodcuts.

"Translator and editor have done justice to their trust. The text has all the force and flow of original writing, combining faithfulness to the author's meaning with purity and independence in regard to idiom, while the technical precision and accuracy pervading the work throughout speak of the watchful editorial supervision which has been given to every scientific detail Altogether, the work may be said to have no parallel, either in point of fulness or attraction, as a popular manual of physical science."—*Saturday Review.*

MACMILLAN & CO., LONDON.

JUDSON'S DYES.—18 Colours, 6d. each.

RIBBONS, WOOL, SILK, FEATHERS,

Completely dyed in 10 minutes without soiling the hands.

Full Instructions supplied. Of all Chemists and Stationers.

JUDSON'S DYES.—Dyeing at Home.—JUDSON'S simple DYES are most useful and effectual. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES Beautiful effects are thus produced in green, pink, brown, and many other colours—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES.—Ferns, Grasses, Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c., by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed

JUDSON'S DYES.—Ink—Ink—Ink.—A Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water.

JUDSON'S DYES.—For Colouring Architectural Plans, &c —Much trouble may be saved in grinding up colours to a uniform tint They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades

JUDSON'S DYES.—For Staining Wood.—Diluted with Water They sink deeply into the fibre, and will not rub off They form the most economical stain on record. Light Brown for mahogany colour is excellent, No. 2 Black for walnut, Canary for satin, also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE

Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

HOLLOWAY'S OINTMENT and PILLS.—Rheumatism and Neuralgia.—Though the former disease remorselessly attacks the young and the robust, and the latter ruthlessly selects its victims from the weak and delicate, the same medical treatment will infallibly cure both complaints After the affected parts have been diligently fomented with hot brine, and the skin has been dried Holloway's Ointment must be well and perseveringly rubbed in for a few minutes twice a day, and his Pills must be taken according to the printed directions wrapped round each box of his medicine Both Ointment and Pills are accompanied by instructions designed for the public at large, and no invalid who attentively reads them can be at any loss how to doctor himself successfully.

POPULAR ASTRONOMY. By G. B. AIRY, Astronomer Royal. With Illustrations. Sixth and Cheaper Edition. 18mo, cloth, 4*s* 6*d*.

"Popular Astronomy in general has many manuals, but none of them supersede the Six Lectures of the Astronomer Royal under that title. Its speciality is the direct way in which every step is referred to the observatory, and in which the methods and instruments by which every observation is made are fully described This gives a sense of solidity and substance to astronomical statements which is obtainable in no other way."—*Guardian.*

MACMILLAN & CO., LONDON.

In royal 8vo, cloth extra gilt, price 31*s*. 6*d*.

CONTRIBUTIONS to SOLAR PHYSICS. By J. NORMAN LOCKYER, F R S. I. A Popular Account of Inquiries into the Physical Constitution of the Sun, with especial reference to Recent Spectroscopic Researches. II Communications to the Royal Society of London and the French Academy of Sciences, with Notes. Illustrated by 7 Coloured Lithographic Plates and 175 Woodcuts.

"The first part of the work, presenting the reader with a continuous sketch of the history of the various inquiries into the physical constitution of the sun, cannot fail to be of interest to all who care for the revelations of modern science; and the interest will be enhanced by the excellence of the numerous illustrations by which it is accompanied."—*Athenæum*

"The book may be taken as an authentic exposition of the present state of science in connexion with the important subject of spectroscopic analysis. . . . Even the unscientific public may derive much information from it"—*Daily News.*

London: MACMILLAN & CO.

WORKS IN PHYSIOLOGY, ANATOMY, &c.

Allbutt (T. C.)—On the USE of the OPHTHALMOSCOPE in Diseases of the Nervous System and of the Kidneys; also in certain other General Disorders. By THOMAS CLIFFORD ALLBUTT, M.A. M.D. Cantab., Physician to the Leeds General Infirmary, Lecturer on Practical Medicine, &c. 8vo, 15*s*.

The Ophthalmoscope has been found of the highest value in the investigation of nervous diseases. But it is not easy for physicians who have left the schools, and are engaged in practice, to take up a new instrument which requires much skill in using; it is therefore hoped that by such the present volume, containing the results of the author's extensive use of the instrument in diseases of the nervous system, will be found of value. After four introductory chapters on the history and value of the Ophthalmoscope, and the manner of investigating the states of the optic nerve and retina, the author treats of the various diseases with which optic changes are associated, and describes the way in which such associations take place. Besides the cases referred to throughout the volume, the Appendix contains details of 123 cases illustrative of the subjects discussed in the text, and a series of tabulated cases to show the ophthalmoscopic appearances of the eye in Insanity, Mania, Dementia, Melancholia and Monomania, Idiotcy, and General Paralysis. The volume is illustrated with two coloured plates of morbid appearances of the eye under the ophthalmoscope.

THE EFFECT of OVERWORK and STRAIN on THE HEART and GREAT BLOOD-VESSELS. (Reprinted from St. George's Hospital Reports.) 2*s*. 6*d*.

Anderson.—On the TREATMENT of DISEASES of the SKIN: with an Analysis of Eleven Thousand Consecutive Cases. By Dr. McCALL ANDERSON, Professor of Practice of Medicine in Anderson's University, Physician to the Dispensary for Skin Diseases, &c., Glasgow. Crown 8vo, cloth, 5*s*.

The first part of this work consists of a carefully tabulated and critical analysis of 11,000 cases of skin disease, 1,000 of these having occurred in the author's private practice, and the rest in his hospital practice. These cases are all classified under certain distinct heads, according to the nature and cause of the disease, while a number of the more interesting cases are alluded to in detail. The second part of the work treats of the Therapeutics of Diseases of the Skin, and will be found to contain many hints, the results of a long and extended experience, as to the most successful method of treating their multitudinous forms.

Anstie (F. E.)—NEURALGIA & DISEASES which RESEMBLE IT. By FRANCIS E. ANSTIE, M.D. M.R.C.P., Senior Assistant Physician to Westminster Hospital. 8vo, 10*s*. 6*d*.

The present treatise is the result of many years' careful independent scientific investigation into the nature and proper treatment of this most painful disease. The author has had abundant means of studying the subject both in his own person and in the hundreds of patients that have resorted to him for treatment. He has gone into the whole subject indicated in the title *ab initio*, and the publishers believe it will be found that he has presented it in an entirely original light, and done much to rob this excruciating and hitherto refractory disease of many of its terrors.

Barwell.—The CAUSES & TREATMENT of LATERAL CURVATURE of the SPINE. Enlarged from Lectures published in the *Lancet*. By RICHAD BARWELL, F.R.C.S., Surgeon to and Lecturer on Anatomy at the Charing Cross Hospital. Second Edition. Crown 8vo, 4*s*. 6*d*.

Corfield (Professor W. H.)—A DIGEST of FACTS RELATING to the TREATMENT and UTILISATION of SEWAGE. By W. H. CORFIELD, M.A. B.A., Professor of Hygiene and Public Health at University College, London. 8vo, 10*s*. 6*d*. Second Edition, corrected and enlarged.

The author in the Second Edition has revised and corrected the entire work, and made many important additions. The headings of the eleven chapters are as follow:—I. Early Systems. Midden-Heaps and Cesspools. II. Filth and Disease—Cause and Effect. III. Improved Midden-Pits and Cesspools; Midden-Closets, Pail-Closets, &c. IV. The Dry Closet Systems. V. Water-Closets. VI. Sewerage. VII. Sanitary Aspects of the Water-Carrying System. VIII. Value of Sewage; Injury to Rivers. IX. Town Sewage; Attempts at Utilisation. X. Filtration and Irrigation. XI. Influence of Sewage Farming on the Public Health.—An abridged account of the more recently published researches on the subject will be found in the Appendices, while the Summary contains a concise statement of the views which the author himself has been led to adopt: references have been inserted throughout to show from what sources the numerous quotations have been derived, and an Index has been added.

Elam (C.)—A PHYSICIAN'S PROBLEMS. By CHARLES ELAM, M.D. M.R.C.P. Crown 8vo, 9*s*.

CONTENTS:—"Natural Heritage." "On Degeneration in Man." "On Moral and Criminal Epidemics." "Body *v*. Mind." "Illusions and Hallucinations." "On Somnambulism." "Reverie and Abstraction." These Essays are intended as a contribution to the Natural History of those outlying regions of Thought and Action whose domain is the debateable ground of Brain, Nerve, and Mind. They are designed also to indicate the origin and mode of perpetuation of those varieties of organisation, intelligence, and general tendencies towards vice or virtue, which seem to be so capriciously developed among mankind. They also point to causes for the infinitely varied forms of disorder of nerve and brain—organic and functional—far deeper and more recondite than those generally believed in.

Fox.—Works by Wilson Fox, M.D., Lond., F.R.C.P., Holme Professor of Clinical Medicine, University College, London, Physician Extraordinary to her Majesty the Queen, &c.:—

DISEASES of the STOMACH: being a new and revised Edition of the "Diagnosis and Treatment of the Varieties of Dyspepsia." 8vo, 8*s*. 6*d*.

"The author has accomplished his design of making the treatise as complete as possible, in relation to the numerous researches on the subject down to the present time. We believe that few, whether students or practitioners, will rise from the perusal of the work without feeling, as we do ourselves, that the study of it has been attended with pleasure and advantage."—*Lancet.*

ON the ARTIFICIAL PRODUCTION of TUBERCLE in the LOWER ANIMALS. With Coloured Plates. 4to, 5*s*. 6*d*.

In this Lecture Dr. Fox describes in minute detail a large number of experiments made by him on guinea-pigs and rabbits for the purpose of inquiring into the origin of Tubercle by the agency of direct irritation or by septic matters. This method of inquiry he believes to be one of the most important advances which have been recently made in the pathology of the disease. The work is illustrated by three plates, each containing a number of carefully coloured illustrations from nature.

MACMILLAN & CO., LONDON.

WORKS IN PHYSIOLOGY, ANATOMY, &c.

Fox.—(Continued.)

ON THE TREATMENT OF HYPERPYREXIA, as Illustrated in Acute Articular Rheumatism by means of the External Application of Cold. 8vo. 2*s.* 6*d.*

The object of this work is to show that the class of cases included under the title, and which have hitherto been invariably fatal, may, by a judicious use of the cold bath and without venesection, be brought to a favourable termination. Minute details are given of the successful treatment by this method of two patients by the author, followed by a Commentary on the cases, in which the merits of the mode of treatment are discussed and compared with those of methods followed by other eminent practitioners. Appended are tables of the observations made on the temperature during the treatment; a table showing the effect of the immersion of the patients in the baths employed, in order to exhibit the rate at which the temperature was lowered in each case; a table of the chief details of twenty-two cases of this class recently published, and which are referred to in various parts of the Commentary. Two Charts are also introduced, giving a connected view of the progress of the two successful cases, and a series of sphygmographic tracings of the pulses of the two patients. "A clinical study of rare value. Should be read by everyone."—*Medical Press and Circular.*

Galton (D.)—AN ADDRESS on the GENERAL PRINCIPLES WHICH SHOULD BE OBSERVED IN THE CONSTRUCTION of HOSPITALS.

Delivered to the British Medical Association at Leeds, July 1869. By DOUGLAS GALTON, C.B., F.R.S. Crown 8vo. 3*s.* 6*d.*

In this Address the author endeavours to enunciate what are those principles which seem to him to form the starting-point from which all architects should proceed in the construction of hospitals. Besides Mr. Galton's paper the book contains the opinions expressed in the subsequent discussion by several eminent medical men, such as Dr. Kennedy, Sir James Y. Simpson, Dr. Hughes Bennet, and others. The work is illustrated by a number of plans, sections, and other cuts. "An admirable exposition of those conditions of structure which most conduce to cleanliness, economy, and convenience."—*Times.*

Hood (Wharton).—ON BONE-SETTING

(so called), and its RELATION to the TREATMENT of JOINTS CRIPPLED by INJURY, RHEUMATISM, INFLAMMATION, &c., &c. By WHARTON P. HOOD, M.D., M.R.C.S. Crown 8vo. 4*s.* 6*d.*

The author for a period attended the London practice of the late Mr. Hutton, the famous and successful bone-setter, by whom he was initiated into the mystery of the art and practice. Thus the author is amply qualified to write on the subject from the practical point of view, while his professional education enables him to consider it in its scientific and surgical bearings. In the present work he gives a brief account of the salient features of a bone-setter's method of procedure in the treatment of damaged joints, of the results of that treatment, and of the class of cases in which he has seen it prove successful. The author's aim is to give the rationale of the bone-setter's practice, to reduce it to something like a scientific method, to show when force should be resorted to and when it should not, and to initiate surgeons into the secret of Mr. Hutton's successful manipulation. Throughout the work a great number of authentic instances of successful treatment are given, with the details of the method of cure; and the Chapters on Manipulations and Affections of the Spine are illustrated by a number of appropriate and well-executed cuts. "Dr. Hood's book is full of instruction, and should be read by all surgeons."—*Medical Times.*

Humphry.—Works by G. M. Humphry,

M.D., F.R.S., Professor of Anatomy in the University of Cambridge, and Honorary Fellow of Downing College:—

Humphry.—(Continued.)

THE HUMAN SKELETON (including the Joints). With 260 Illustrations, drawn from nature. Medium 8vo, 28*s.*

In lecturing on the Skeleton it has been the author's practice, instead of giving a detailed account of the several parts, to request his students to get up the descriptive anatomy of certain bones, with the aid of some work on osteology. He afterwards tested their acquirements by examination, endeavouring to supply deficiencies and correct errors, adding also such information—physical, physiological, pathological, and practical—as he had gathered from his own observation and researches, and which was likely to be useful and excite an interest in the subject. This additional information forms, in great part, the material of this volume, which is intended to be supplementary to existing works on anatomy. Considerable space has been devoted to the description of the joints, because it is less fully given in other works, and because an accurate knowledge of the structure and peculiar form of the joints is essential to a correct knowledge of their movements. The numerous illustrations were all drawn upon stone from nature; and in most instances, from specimens prepared for the purpose by the author himself. "Bearing at once the stamp of the accomplished scholar, and evidences of the skilful anatomist."—*Medical Times and Gazette.*

OBSERVATIONS IN MYOLOGY. 8vo, 6*s.*

Prof. Humphry's previous works have gained for him a very high position as an original anatomist, and the present it is believed will fully sustain that reputation, as well as prove valuable to all who take an interest in the higher problems of anatomy. The work includes the Myology of Cryptobranch, Lepidosiren, Dog-Fish, Ceratodus, and Pseudopus pallasii, with the Nerves of Cryptobranch and Lepidosiren and the Disposition of Muscles in Vertebrate Animals. The volume abounds in carefully executed illustrations.

JOURNAL OF ANATOMY AND PHYSIOLOGY.

Conducted by Professors HUMPHRY and NEWTON, and Mr. CLARK of Cambridge, Prof. TURNER of Edinburgh, and Dr. WRIGHT of Dublin. Published twice a year. Old Series, Parts I. and II., price 7*s.* 6*d.* each. Vol. I. containing Parts I. and II., Royal 8vo, 16*s.* New Series, Parts I. to IX. 6*s.* each, or yearly Vols. 12*s.* 6*d.* each.

Lankester.—COMPARATIVE LONGEVITY in MAN AND the LOWER ANIMALS.

By E. RAY LANKESTER, B.A. Crown 8vo, 4*s.* 6*d.*

This Essay gained the prize offered by the University of Oxford for the best paper on the subject which it treats. This interesting subject is here treated in a thorough manner, both scientifically and statistically.

Maclaren.—TRAINING in THEORY and PRACTICE.

By ARCHIBALD MACLAREN, the Gymnasium, Oxford, crown 8vo. Second and enlarged edition, 6*s.* 6*d.*

The ordinary agents of Health are Exercise, Diet, Sleep, Air, Bathing, and Clothing. In this work the author examines each of these agents in detail, and from two different points of view. First, as to the manner in which it is, or should be, administered under ordinary circumstances: and secondly, in what manner and to what extent this mode of administration is, or should be, altered for purposes of training; the object of "training," according to the author, being "to put the body, with extreme and exceptional care, under the influence of all the agents which promote its health and strength, in order to enable it to meet extreme and exceptional demands upon its energies." Appended are various diagrams and tables relating to boat-racing, and tables connected with diet and training. "The philosophy of human health has seldom received so apt an exposition."—*Globe.* "After all the nonsense that has been written about training, it is a comfort to get hold of a thoroughly sensible book at last."—*John Bull.*

BRITISH ASSOCIATION for the ADVANCEMENT OF SCIENCE,

22, Albemarle Street, London, W.

The NEXT ANNUAL GENERAL MEETING will be held at BELFAST, commencing on WEDNESDAY, August 19

President-Elect,

Professor TYNDALL, D.C.L. LL D F R S F C S.

NOTICE TO CONTRIBUTORS OF MEMOIRS —Authors are reminded that, under an arrangement dating from 1871, the acceptance of Memoirs, and the days on which they are to be read, are now, as far as possible, determined by Organising Committees for the several Sections before the beginning of the Meeting. It has therefore become necessary, in order to give an opportunity to the Committees of doing justice to the several communications, that each Author should prepare an Abstract of his Memoir, of a length suitable for insertion in the published Transactions of the Association, and that he should send it, together with the original Memoir, by book-post, on or before August 1, addressed thus:—"General Secretaries, British Association, 22, Albemarle Street, London, W. For Section ." If it should be inconvenient to the Author that his paper should be read on any particular day, he is requested to send information thereof to the Secretaries in a separate note.

G GRIFFITH, M.A ,
Assistant General Secretary, Harrow.

OWENS COLLEGE, MANCHESTER.

PROFESSORSHIP OF ANATOMY

The Council propose to make an Appointment previous to the commencement of the next Winter Session, of a Professor of Anatomy in connection with the Medical Department of the College (with which is now incorporated the Manchester Royal School of Medicine, founded in 1824), and they invite Gentlemen willing to become Candidates to send in applications and testimonials addressed to the Council under cover to the Registrar not later than Saturday, 1st August next The emoluments of the office will be derived from a stipend and a share of students' fees, and the Council will guarantee for a certain term that these together shall not be less than £500 per annum

Further information will be given on application to J G Greenwood, LL D , Principal of the College

J HOLME NICHOLSON, Registrar

23rd June, 1874.

QUEENWOOD COLLEGE, near STOCKBRIDGE, HANTS.

Sound General Education for Boys

Special attention to Science, particularly to Chemistry, both theoretical and practical

C. WILLMORE, Principal.

PROFESSORSHIP IN BIOLOGY.

DURHAM UNIVERSITY COLLEGES of MEDICINE and PHYSICAL SCIENCE,

Newcastle-upon-Tyne —It is proposed to establish a Chair of Biology combined with Physiology, in connection with the above Institutions, in October next Salary £450, with a portion of fees Candidates for the office are invited to apply (with testimonials) to Theo. Wood Bunning, Secretary to the College of Physical Science, Newcastle, before the 15th August next, from whom full particulars as to duties, &c , may be obtained

---

READING SCHOOL.—A Natural Science MASTER

will be required in September —Apply, stating full particulars, to Rev. W. Stokoe, Reading

---

ROYAL COUNCIL OF EDUCATION.—

The Laboratory and Class-rooms of Berners College are open for Pupils EVERY DAY and EVENING. The subjects of the above Examinations can be studied either Privately or in Classes. Fees moderate Analyses and Investigations conducted.—Apply to Prof. E. V. GARDNER, F.E.S., F.S A., 44, Berners Street, W

OLDHAM SCHOOL of SCIENCE and ART

—ADDITIONAL LABORATORY APPARATUS is required for Students experimenting in Light, Sound, Heat, Magnetism and Electricity. Manufacturers are requested to send latest price-lists to J. P. Phythian, C E , Science Master.

LINNEAN SOCIETY.—This day is published,

price £1 10s , the First Part of Vol XXX of the TRANSACTIONS of the LINNEAN SOCIETY of LONDON. Sold by Longmans and Co , Paternoster Row, and by Mr Kippist, at the Apartments of the Society, Burlington House, Piccadilly, of whom may be had all or any of the preceding volumes. The Fellows of the Society are requested to apply to Mr. Kippist for their Copies between the hours of 12 and 4 o'clock.

An INDEX to the JOURNAL of the CHEMICAL SOCIETY,

1841–1872, is now ready, including both Authors' Names and Subjects It may be obtained by Fellows at the Society's Rooms, price 5s , by post 5s. 4d ; and by Non-Fellows at the Publisher's, J. Van Voorst, 1, Paternoster Row, price 10s.

The JOURNAL of the CHEMICAL SOCIETY

now contains Abstracts of all Papers on Chemistry, and its relations to Physiology and the Arts, published in British or Foreign Journals It is issued monthly, and may be obtained by Non-Fellows of Mr Van Voorst by a subscription of £1 1s

TO NATURALISTS and CURATORS of MUSEUMS.—Sale of Valuable Osteological Specimens. A Collection of very choice Osteological Specimens, including an admirably prepared Skeleton of a large Boa in glass case, with Crania of Tapir, Hippopotamus, Walrus, &c., and a variety of Preparations suited for Museums and Science Teachers, to be sold at 13, Wellington Street, Strand, by Messrs. Sotheby, Wilkinson, and Hodge, of whom Catalogues may be had. A Cabinet of Choice Fossils and a valuable Collection of Minerals also to be sold.

A LADY requires a RE-APPOINTMENT. German, French, the Elements of Natural Science, together with all the usual branches of Education. Highest References can be given.—Address, M.A.H., care of the Publishers of NATURE, 29, Bedford Street, Covent Garden, W.C.

TO BE SOLD.—A Collection of British Bird-skins, Eggs, and Insects in Oak Cabinets.—For further particulars apply to "Oologist," care of Editor of NATURE, 29, Bedford Street, Strand, London, W.C.

TRUSSES (Self-adjusting), in use for the last sixty years, and same as worn by his late Majesty William IV. From 10s each. SALMON ODY & CO., by appointment to the Army and Navy, 292, Strand, London. Price List post free.

CHEST EXPANDER and TROUSERS BRACE combined, 8s. Ladies' Chest Expanders from 5s. 6d. SALMON ODY & CO., 292, Strand, London. Established 1806.

ELASTIC STOCKINGS for Varicose Veins or Weak Joints; and LADIES' ABDOMINAL BELTS, made to any size. Directions for self-measurement and prices post free. SALMON ODY & CO., 292, Strand, London.

NOTICE.—To Science Classes.—MOTTERSHEAD AND CO., LABORATORY FURNISHERS, EXCHANGE STREET, MANCHESTER, supply all the Apparatus enumerated in the SOUTH KENSINGTON LISTS FOR THE USE OF TEACHERS OF PHYSICAL SCIENCE (Light, Heat, Electricity, Magnetism, &c.), and will be happy to show intending purchasers specimens of the various Instruments, or to forward Estimates on application. Orders exceeding £2 in value delivered free to any railway station in England.

NATURE.—Wanted clean Copies of Nos. 10, 13, and 116. NATURE Office, 29, Bedford Street, Strand, W.C.

ELASTIC STOCKINGS, KNEE-CAPS, &c., for Varicose Veins and all cases of weakness and Swellings of the Legs, Sprains, &c. They are porous, light in texture, and inexpensive, and drawn on over an ordinary stocking. Price 4s. 6d., 7s. 6d., 10s., and 16s. each. Postage free.

JOHN WHITE, Manufacturer, 228, Piccadilly, London.

On the 1st of every Month, pp. 32, 8vo, with at least One Plate,

THE JOURNAL OF BOTANY,

BRITISH AND FOREIGN,

Edited by HENRY TRIMEN, M.B., F.L.S., British Museum, assisted by J. G. BAKER, F.L.S., Royal Herbarium, Kew.

Subscriptions for 1874 (12s. post free in the United Kingdom) payable in advance to the publishers, Messrs. Ranken and Co., Drury House, St Mary-le-Strand, London, W.C., of whom may be obtained the volume for 1873 (price 16s 6d. bound in cloth); also covers for the volume (price 1s.), and back numbers.

THE ZOOLOGIST.

A MONTHLY JOURNAL OF NATURAL HISTORY.

Conducted by EDWARD NEWMAN, F.L.S. F.Z.S. &c.

The Zoologist was established in 1843 to record and preserve observations on subjects similar to those treated of in White's "Natural History of Selborne," and the success which has attended it is sufficient proof that its plan is acceptable to "out-of-door naturalists," those who delight in observing the manners, habits, the private lives, the migrations, movements, nests, young and food of animals. It contains original papers and records of facts relating to Quadrupeds, Birds, Reptiles, Fishes, and Insects, together with notices of recent works on every branch of Natural History. The editor has been assisted by more than two hundred of our very best zoologists.

Published on the First of every Month.

PRICE ONE SHILLING.

London: JOHN VAN VOORST, 1, Paternoster Row.

THE ENTOMOLOGIST'S MONTHLY MAGAZINE.

Price Sixpence, monthly, 24 pages 8vo., with occasional Illustrations. Conducted by J. W. DOUGLAS, R. MCLACHLAN, F.L.S., E. C. RYE, and H. T. STAINTON, F.R.S., &c.

This Magazine, commenced in 1864, contains standard articles and notes on all subjects connected with Entomology, and especially on the Insects of the British Isles.

Subscription—Six Shillings per Volume, post-free. The volumes commence with the June number in each year.

Vols. I. to V. (strongly bound in cloth) may be obtained by purchasers of the entire set to date, at the increased price of 10s. each; the succeeding vols. may be had separately or together at 7s. each.

London: JOHN VAN VOORST, 1, Paternoster Row.

N B.—Communications, &c., should be sent to the Editors at the above address.

THE ONLY CHEAP FARMERS' NEWSPAPER.

THE CHAMBER OF AGRICULTURE JOURNAL

AND FARMERS' CHRONICLE,

Edited by JOHN ALGERNON CLARKE, Secretary to the Central Chamber of Agriculture,

Devotes special attention to the discussions and proceedings of the Chambers of Agriculture of Great Britain (which now number upwards of 18,000 members), besides giving original papers on practical farming, and a mass of intelligence of particular value to the agriculturist.

The London Corn, Seed, Hop, Cattle, and other Markets of Monday are specially reported in this Journal, which is despatched the same evening so as to insure delivery to country subscribers by the first post on Tuesday morning. Price 3d., or prepaid, 15s. a year post free.

Published by W. PICKERING, 21, Arundel Street, Strand, W.C.

"THE GARDEN,"

A Weekly Illustrated Journal devoted solely to Horticulture in all its Branches.

"THE GARDEN" is conducted by WILLIAM ROBINSON, F.L.S., Author of "Hardy Flowers," "Alpine Flowers for English Gardens," "The Parks, Promenades, and Gardens of Paris," &c.; and the best Writers in every Department of Gardening are contributors to its pages.

The following are some of the subjects regularly treated of in its pages —

The Flower Garden.
Landscape Gardening.
The Fruit Garden.
Garden Structures.
Room and Window Gardens.
Notes and Questions.
Market Gardening.
Trees and Shrubs.
Hardy Flowers.
Town Gardens.
The Conservatory.
Public Gardens.
The Greenhouse and Store.
The Household
The Wild Garden.
The Kitchen Garden.

"THE GARDEN" may be obtained through all Newsagents and at the Railway Bookstalls, at 4d. per Copy. It may also be had direct from the Office at 5s. for a Quarter, 9s. 9d. for a Half-year, and 10s. 6d. for a Year, payable in advance, and in Monthly Parts. Specimen Copies (post-free), 4½d.

37, Southampton Street, Covent Garden, S.W.

NEWMAN'S ENTOMOLOGIST:

A MONTHLY ILLUSTRATED JOURNAL OF BRITISH INSECTS

Conducted by EDWARD NEWMAN, F.L.S. F.Z.S. &c.,

Late President of the Entomological Society.

The objects of the *Entomologist* are to give every information about Insects; more especially to work out the history of those which attack Fruit and Forest Trees, Vegetables, Root and Seed Crops, Greenhouse and Garden Plants, with a view to suggesting remedies. Notes, Observations, and Queries on every branch of the Science are solicited. To preserve a continuous record of the occurrence of rarities. To improve collections by offering a ready medium for the exchange of specimens.

Published on the First of every Month.

PRICE SIXPENCE.

SIMPKIN, MARSHALL, and Co., Stationers' Hall Court.

MACMILLAN'S MAGAZINE.

No. 177. FOR JULY.

PRICE 1s.

CONTAINS—

1.—"Slavery and the Slave Trade." By Sir Samuel White Baker, Pasha, M.A., F.R.S., F.R.G.S., &c.
2.—"Castle Daly: The Story of an Irish Home Thirty Years Ago." Chapters XIV.—XVI.

MACMILLAN & CO., London.

JUDSON'S DYES.—18 Colours, 6d. each.

RIBBONS, WOOL, SILK, FEATHERS,

Completely dyed in 10 minutes without soiling the hands.

Full Instructions supplied. Of all Chemists and Stationers.

JUDSON'S DYES.—Dyeing at Home.—JUDSON'S simple DYES are most useful and effectual. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES. Beautiful effects are thus produced in green, pink, brown, and many other colours—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES. — Ferns, Grasses, Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c., by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed.

JUDSON'S DYES.—Ink—Ink—Ink.—A Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water.

JUDSON'S DYES.—For Colouring Architectural Plans, &c.—Much trouble may be saved in grinding up colours to a uniform tint. They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades.

JUDSON'S DYES.—For Staining Wood.—Diluted with Water. They sink deeply into the fibre, and will not rub off. They form the most economical stain on record. Light Brown for mahogany colour is excellent; No. 2 Black for walnut; Canary for satin; also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE

Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

SCOTTISH PROVIDENT INSTITUTION,

EDINBURGH: 6, St. Andrew Square. LONDON: 18, King William Street, E.C.

ITS ADVANTAGES over other offices are:—
A larger immediate assurance for the same premium, with the prospect to good lives of eventually receiving very considerable additions.

Thus £1,200 or £1,250 may be secured at once for the premium usually charged for £1,000 only; and policies originally for, say, £1,000, have been increased to £1,170, £1,450, £1,600, and in some cases have been doubled.

FINANCIAL POSITION.

The Fund, accumulated entirely from the premiums, exceeds £2,250,000. Notwithstanding its low rates, no Office of the same age (Established 1837) has so large a Fund, or shows so large an increase from year to year.

This day, royal 8vo, 764 pp, cloth, with over 200 Illustrations, price 34*s*.

ELEMENTS OF METALLURGY.

A PRACTICAL TREATISE ON THE ART OF EXTRACTING METALS FROM THEIR ORES.

By J. ARTHUR PHILLIPS, M. Inst. C.E., F.C.S., F.G.S., &c.

Ancien Elève de l'Ecole des Mines, Paris; Author of "Mining and Metallurgy of Gold and Silver," &c.

London: CHARLES GRIFFIN & CO., 10, Stationers' Hall Court.

A FEW ARTIST'S PROOFS
OF

THE PORTRAIT OF CHARLES DARWIN, F.R.S.

(ENGRAVED ON STEEL BY CHAS. H. JEENS),

Have been printed on India Paper, and may be had at the Office of *NATURE*, 29, Bedford Street, Strand, W.C.,

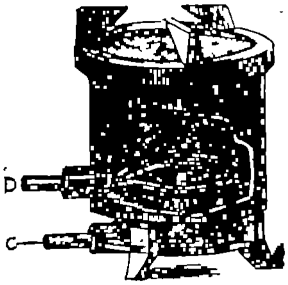
1871.—FIRST-CLASS BRONZE MEDAL, Royal Cornwall Polytechnic Society. 1872.—SILVER MEDAL. 1873.—INTERNATIONAL EXHIBITION PRIZE MEDAL.

FLETCHER'S

NEW LOW TEMPERATURE BURNER (PATENT)



This Burner gives a range of heating power from a gentle current of WARM air to a BRIGHT RED HEAT, and is so perfectly under control that a common glass bottle may be placed on the tripod without protection and heated to any required temperature without the slightest risk of fracture. In practical use it dispenses with the necessity for drying-closets, sand-and-water baths, &c.

For very low temperatures the ring must be lighted through the opening B, this causes a current of warm air to rise through the gauze above. For higher temperatures the light must be applied on the surface of the gauze A, which will give a large body of clear blue flame. A special pattern is made with a blast tube, by which the flame on the surface can be concentrated and urged until it gives almost a clear white heat, the temperature depending on the air supplied through the blast tube.

Price, without blast tube ... ... 7*s*. 6*d*.
" with blast tube for high temperatures ... 9*s*. 0*d*.

UNIVERSAL FURNACE (GAS),

For High Temperatures (without blast) for Crucibles, Muffles, &c, in several sizes and patterns. Special designs made to order

NEW BUNSEN BURNERS, giving a range of temperature up to a clear white heat. 10*s*. 6*d*.

HOT BLAST BLOWPIPES, giving temperatures exceeding the fusing-point of platinum, 11*s* 6*d*., 13*s*., 15*s*.

POWERFUL FOOT-BLOWERS, 18*s*.

SPECTRUM ANALYSIS. By Professor ROSCOE, F.R.S. With Appendices, Engravings, Maps, and Chromo-lithographs.

"The illustrations—no unimportant part of a book on such a subject—are marvels of wood-printing, and reflect the clearness which is the distinguishing merit of Mr. Roscoe's explanations."—*Saturday Review.*

"The lectures themselves furnish a most admirable elementary treatise on the subject, whilst by the insertion in appendices to each lecture of extracts from the most important published memoirs, the author has rendered it equally valuable as a text-book for advanced students."—*Westminster Review.*

MACMILLAN & CO., LONDON.

Works by Francis Galton, F.R.S.

METEOROGRAPHICA, or Methods of Mapping the Weather. Illustrated by upwards of 600 Printed Lithographic Diagrams. 4to, 9*s.*

As Mr. Galton entertains strong views on the necessity of meteorological charts and maps, he determined, as a practical proof of what could be done, to chart the area of Europe, so far as meteorological stations extend, during one month, viz. the month of December 1861. Mr. Galton got his data from authorities in every part of Britain and the Continent, and on the basis of these has here drawn up nearly a hundred different maps and charts, showing the state of the weather all over Europe during the above period.

HEREDITARY GENIUS: An Inquiry into its Laws and Consequences. Demy 8vo, 12*s.*

"A most able and most interesting book."—*Times.* "We know, through the admirable labours of Mr. Galton, that Genius tends to be inherited."—Darwin's "Descent of Man," vol. i. p. 3.

BRYANT & MAY'S MATCHES.

HOLLOWAY'S PILLS.—This Medicine has been constantly increasing in public estimation for many years, and is now acknowledged to be the most wonderful remedy in the world. It acts directly on the system, removes all obstructions from the stomach, tempers the springs of life, purifies the blood, and totally eradicates liver complaint (that mainspring of so many diseases), indigestion loss of appetite, pain in the side, &c. It is also a remedy on which the asthmatic may place the greatest dependence, the debilitated the greatest reliance, that they will therefrom obtain perfect restoration to health. These Pills maintain functional regularity, and as a consequence dispel low spirits, common to human nature at all ages under untoward circumstances

An INTRODUCTION to the OSTEOLOGY of the MAMMALIA. Being the substance of the Course of Lectures delivered at the Royal College of Surgeons of England in 1870. By W. H. FLOWER, F.R.S., F.R.C.S., Hunterian Professor of Comparative Anatomy and Physiology. With numerous Illustrations. Globe 8vo, 7*s.* 6*d.*

Although the present work contains the substance of a Course of Lectures the form has been changed, so as the better to adapt it as a handbook for students. Theoretical views have been almost entirely excluded; and while it is impossible in a scientific treatise to avoid the employment of technical terms, it has been the author's endeavour to use no more than absolutely necessary, and to exercise due care in selecting only those that seem most appropriate, or which have received the sanction of general adoption. With a very few exceptions the illustrations have been drawn expressly for this work from specimens in the Museum of the Royal College of Surgeons.

MACMILLAN & CO., LONDON.

NEW BOOKS.

TELEGRAPH and TRAVEL. A Narrative of the Formation and Development of Telegraphic Communication between England and India, under the Orders of Her Majesty's Government; with Incidental Notices of the Countries through which the Lines pass. By Colonel Sir FREDERIC GOLDSMID, C.B. K.C.S.I., late Director of the Government Indo-European Telegraph. With numerous Illustrations and Maps, 8vo. [Immediately.

ESSAYS and ADDRESSES, by PROFESSORS and LECTURERS of Owens College, Manchester. Published in Commemoration of the Opening of the New College Buildings, October 7th, 1873. 8vo, 14s. [This day.

Among the contributors to this volume are the following:—The Duke of Devonshire, K.G. F.R.S., Prof. Greenwood (Principal), Prof. Roscoe, F.R.S., Prof. Balfour Stewart, F.R.S., Prof. Williamson, F.R.S., Prof. Gamgee, F.R.S., Prof. Bryce, D.C.L., Prof. Jevons, F.R.S., &c.

HORÆ HELLENICÆ. Essays and Discussions on some Important Points of Greek Philology and Antiquity. By JOHN STUART BLACKIE, F.R.S.E., Professor of Greek in the University of Edinburgh. 8vo, 12s. [This day.

SOME LEADING PRINCIPLES of POLITICAL ECONOMY newly EXPOUNDED. By J. E. CAIRNES, M.A., Emeritus Professor of Political Economy in University College, London. 8vo, 14s. [This day.

"It is with great pleasure that we welcome another contribution to political economy from the ablest living representative of the school of Ricardo and Mill."—*Saturday Review.*

"The most important part of this volume is that which deals with cost of production and of value as determined by cost. It is on this subject that Prof. Cairnes has rendered the most signal service to the progress of economic science; and, if we mistake not, his investigations will mark an era in the history of political economy as distinct as, and scarcely less important than, those connected with the names of Ricardo, Malthus, and Mill."—*Athenæum.*

Twelfth Edition, Revised.

NOTES on the PARABLES of OUR LORD. By R. CHENEVIX TRENCH, D.D., Archbishop of Dublin. 8vo, 12s. [This day.

A NEW FRENCH DICTIONARY.

A COMPENDIOUS DICTIONARY of the FRENCH LANGUAGE (French-English and English-French). Followed by a List of the Principal Diverging Derivations, and preceded by Chronological and Historical Tables. By GUSTAVE MASSON, Assistant-Master and Librarian, Harrow School. Square half bound, 6s. [This day.

This volume, though cast in the same form as other dictionaries, has several distinctive features which increase its value for the student. In the French-English part, etymologies, founded on the researches of Messrs. Littré, Scheler, and Brachet, are given. The list of diverging derivations, at the end of the volume, will be very useful to those who are interested in tracing the various developments of original Latin words. But that which makes it almost indispensable to students of the political and literary history of France, is to be found at the beginning of the work, where M. Masson has drawn up clear and complete tables of historical events, viewed in connection with the developments of literature and language, between the death of Charlemagne, 814 A.D., and that of Louis Philippe, 1850. These tables are illustrated by remarks on the various social moods, of which the works produced were the expression. Appended also is a list of the principal Chronicles and Memoirs on the History of France which have appeared up to the present time; the French Republican Calendar, compared with the Gregorian; and a Chronological List of the principal French Newspapers published during the Revolution and the First Empire. We feel sure that all who study this work will allow that the author has signally overcome the lexicographer's natural tendency to dryness. As a dictionary, it is unusually copious, and as a book remarkably handy.

THIRD AND CHEAPER EDITION, SOMEWHAT ABRIDGED.

JOHN COLERIDGE PATTESON'S LIFE. By CHARLOTTE M. YONGE, Author of "The Heir of Redclyffe." With Two Portraits, engraved by Jeens. 2 vols. crown 8vo, 12s. [This day.

"Miss Yonge's book is in one respect a model biography. It is made up almost entirely of Patteson's own letters. Aware that he had left his home for once and for all, his correspondence took the shape of a diary, and as we read on we come to know the man, and to love him almost as if we had seen him."—*Athenæum.*

"Such a life, with its grand lessons of unselfishness, is a blessing and an honour to the age in which it is lived: the biography cannot be studied without pleasure and profit, and, indeed, we should think little of the man who did not rise from the study of it better and wiser. Neither the Church nor the Nation which produces such sons need ever despair of its future."—*Saturday Review.*

Nearly ready, No. X. of

The JOURNAL of PHILOLOGY. Edited by W. G. CLARK, M.A., Fellow of Trinity College; J. E. B. MAYOR, M.A., Fellow of St. John's College, and W. ALDIS WRIGHT, M.A., Trinity College, Cambridge.

WORTHIES of ALL SOULS. Four Centuries of English History, Illustrated from the College Archives. By MONTAGU BURROWS, Chichele Professor of Modern History at Oxford, Fellow of All Souls. 8vo. 14*s*. [*Next week.*

WILLIAM CARSTARES: a Character and Career of the Revolutionary Epoch (1649-1715). By ROBERT H. STORY, Minister of Rosneath. With Portrait Engraved by Jeens. 8vo. [*Shortly.*

"William had, however, one Scottish adviser who deserved and possessed more influence than any of the ostensible ministers. This was Carstares, one of the most remarkable men of that age. He united great scholastic attainments with great aptitude for civil business, and the firm faith and ardent zeal of a martyr with the shrewdness and suppleness of a consummate politician. In courage and fidelity he resembled Burnet; but he had what Burnet wanted—judgment, self-command, and a singular power of keeping secrets. There was no post to which he might not have aspired if he had been a layman, or a priest of the Church of England."—*Macaulay's History of England.*

By SEA and by LAND: a Trip through Egypt, India, Ceylon, Australia, New Zealand, and America. By HENRY A. MEREWETHER, one of Her Majesty's Counsel. Crown 8vo. 3*s*. 6*d*.

HIGHER SCHOOLS and UNIVERSITIES in GERMANY. By Matthew ARNOLD, D.C.L., formerly Foreign Assistant-Commissioner to the Schools' Inquiry Commission. With a New Preface, comparing the Policy of the Prussian Government towards Roman Catholic Education and Roman Catholicism with that of the English Government in Ireland. Crown 8vo. 6*s*.

Canon KINGSLEY'S WESTMINSTER SERMONS. 8vo. 10s. 6d.

These Sermons were preached either at Westminster Abbey or at one of the Chapels Royal. Their subjects are:—The Mystery of the Cross—The Perfect Love—The Spirit of Whitsuntide—Prayer—The Deaf and Dumb—The Fruits of the Spirit—Confusion—The Shaking of the Heavens and the Earth—The Kingdom of God—The Law of the Lord—God the Teacher—The Reasonable Prayer—The One Escape—The Word of God—I—The Cedars of Lebanon—Life—Death—Signs and Wonders—The Judgments of God—The War in Heaven—Noble Company—De Profundis—The Blessing and the Curse—The Silence of Faith—God and Mammon—The Beatific Vision.

WARNINGS AGAINST SUPERSTITION: in Four Sermons for the Day. By the Rev. J. LLEWELYN DAVIES, M.A., Rector of Christ Church, St. Marylebone. Extra fcap. 8vo. 2*s*. 6*d*.

YU-PE-YA'S LUTE; a Chinese Tale in English Verse. By Augusta Webster. Extra fcap. 8vo, price 3*s*. 6*d*.

"The Brewers' Guardian" is published on the Evenings of every alternate Tuesday, and is the only journal officially connected with brewing interests

Subscription, 16*s* 6*d.* per annum, post free, dating from any quarter-day. Single Copies, 1*s.* each. Registered for transmission abroad.

Offices—5, Bond Court, Walbrook, London, E.C.

SCOTTISH PROVIDENT INSTITUTION,

EDINBURGH: 6, St. Andrew Square. LONDON: 18, King William Street, E.C.

ITS ADVANTAGES over other offices are:—

A larger immediate assurance for the same premium, with the prospect to good lives of eventually receiving very considerable additions.

Thus £1,200 or £1,250 may be secured at once for the premium usually charged for £1,000 only; and policies originally for, say, £1,000, have been increased to £1,170, £1,450, £1,600, and in some cases have been doubled.

FINANCIAL POSITION.

The Fund, accumulated entirely from the premiums, exceeds £2,250,000. Notwithstanding its low rates, no Office of the same age (Established 1837) has so large a Fund, or shows so large an increase from year to year.

This day is published.

MANUAL OF BOTANY,

ANATOMICAL AND PHYSIOLOGICAL.

FOR THE USE OF STUDENTS.

By **ROBERT BROWN, M.A., Ph.D., F.L.S., F.R.G.S.,** &c.

29, BEDFORD STREET, STRAND, W.C.

TO SECRETARIES OF SCIENTIFIC AND LITERARY SOCIETIES.

It having been suggested that the publication of a weekly Diary in NATURE of the Meetings, &c. *of the various provincial* Scientific and Literary Societies *would be found very useful, not only to the Members of such Societies, but to all who are interested in scientific and literary subjects, the Publishers have determined to devote a portion of their Advertisement columns to this purpose, and to insert* NOTICES OF MEETINGS, SUBJECTS OF LECTURES, *&c., at the nominal charge of* One Shilling *for each insertion.*

The Publishers of NATURE *will be glad if the Secretaries of Societies will aid them in their endeavours to make this weekly Diary as complete and useful as possible. Notices intended for insertion therein must be sent, addressed to the* Publishers, *by* Wednesday Mornings.

OFFICE—29, BEDFORD STREET, STRAND.

Works by Francis Galton, F.R.S.

METEOROGRAPHICA, or Methods of Mapping the Weather. Illustrated by upwards of 600 Printed Lithographic Diagrams. 4to, 9*s.*

As Mr. Galton entertains strong views on the necessity of meteorological charts and maps, he determined, as a practical proof of what could be done, to chart the area of Europe, so far as meteorological stations extend, during one month, viz. the month of December 1861. Mr. Galton got his data from authorities in every part of Britain and the Continent, and on the basis of these has here drawn up nearly a hundred different maps and charts, showing the state of the weather all over Europe during the above period.

HEREDITARY GENIUS: An Inquiry into its Laws and Consequences. Demy 8vo, 12*s.*

"A most able and most interesting book."—*Times.* "We know, through the admirable labours of Mr. Galton, that Genius tends to be inherited."—Darwin's "Descent of Man," vol. i. p. 3.

MACMILLAN & CO., LONDON.

An INTRODUCTION to the OSTEOLOGY

of the MAMMALIA. Being the substance of the Course of Lectures delivered at the Royal College of Surgeons of England in 1870. By W. H. FLOWER, F.R.S., F.R.C.S., Hunterian Professor of Comparative Anatomy and Physiology. With numerous Illustrations. Globe 8vo, 7*s.* 6*d.*

Although the present work contains the substance of a Course of Lectures the form has been changed, so as the better to adapt it as a handbook for students. Theoretical views have been almost entirely excluded; and while it is impossible in a scientific treatise to avoid the employment of technical terms, it has been the author's endeavour to use no more than absolutely necessary, and to exercise due care in selecting only those that seem most appropriate, or which have received the sanction of general adoption. With a very few exceptions the illustrations have been drawn expressly for this work from specimens in the Museum of the Royal College of Surgeons.

MACMILLAN & CO., LONDON.

TISLEY AND SPILLER,
OPTICIANS, &c.,

172, BROMPTON ROAD, S.W.

(Three minutes' walk from South Kensington Museum).

JUDSON'S DYES.—18 Colours, 6d. each.

RIBBONS, WOOL, SILK, FEATHERS,

Completely dyed in 10 minutes without soiling the hands.

Full Instructions supplied. Of all Chemists and Stationers.

JUDSON'S DYES.—Dyeing at Home.—JUDSON'S simple DYES are most useful and effectual. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES. Beautiful effects are thus produced in green, pink, brown, and many other colours.—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES.—Ferns, Grasses, Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c., by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed.

JUDSON'S DYES.—Ink—Ink—Ink.—A Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water.

JUDSON'S DYES.—For Colouring Architectural Plans, &c.—Much trouble may be saved in grinding up colours to a uniform tint. They may be used either with a brush or pen Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades.

JUDSON'S DYES.—For Staining Wood.—Diluted with Water. They sink deeply into the fibre, and will not rub off. They form the most economical stain on record. Light Brown for mahogany colour is excellent; No. 2 Black for walnut; Canary for satin, also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE

Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

HOLLOWAY'S OINTMENT and PILLS.

—"Experience before authority"—For nearly a third of a century have these remedies stood in the foremost rank for overcoming ulcers, sores, swellings, rashes, and all descriptions of skin diseases At first the faculty denounced these medicaments, but the experience of sufferers soon overthrew all interested opposition. Those whom Holloway's medicine had cured told other invalids the benefits they had derived from their use, these in their turn tried them, and found equally satisfactory results. Old and new stores of knowledge were ransacked to discover the surest and simplest method of meeting and conquering sickness—the issue was the invention of Holloway's Curatives, which the testimony of patients universally indorses as indisputable defences against disease.

NEW BOOKS.

TELEGRAPH and TRAVEL. A Narrative of the Formation and Development of Telegraphic Communication between England and India, under the Orders of Her Majesty's Government; with Incidental Notices of the Countries through which the Lines pass. By Colonel Sir FREDERIC GOLDSMID, C.B. K.C.S.I., late Director of the Government Indo-European Telegraph. With numerous Illustrations and Maps, 8vo. [Immediately.

ESSAYS and ADDRESSES, by PROFESSORS and LECTURERS of Owens College, Manchester. Published in Commemoration of the Opening of the New College Buildings, October 7th, 1873. 8vo, 14*s*. [This day.

Among the contributors to this volume are the following:—The Duke of Devonshire, K.G. F.R.S., Prof. Greenwood (Principal), Prof. Roscoe, F.R.S., Prof. Balfour Stewart, F.R.S., Prof. Williamson, F.R.S., Prof. Gamgee, F.R.S., Prof. Bryce, D.C.L., Prof. Jevons, F.R.S., &c.

The BIRDS of ARISTOPHANES. Translated into English Verse, with Introduction, Notes, and Appendices, by B. H. KENNEDY, D.D., Regius Professor of Greek in the University of Cambridge. Crown 8vo, 6*s*. [Just ready.

HORÆ HELLENICÆ. Essays and Discussions on some Important Points of Greek Philology and Antiquity. By JOHN STUART BLACKIE, F.R.S.E., Professor of Greek in the University of Edinburgh. 8vo, 12*s*. [This day.

SOME LEADING PRINCIPLES of POLITICAL ECONOMY newly EXPOUNDED. By J. E. CAIRNES, M.A., Emeritus Professor of Political Economy in University College, London. 8vo, 14*s*. [This day.

"It is with great pleasure that we welcome another contribution to political economy from the ablest living representative of the school of Ricardo and Mill."—*Saturday Review*.

"The most important part of this volume is that which deals with cost of production and of value as determined by cost. It is on this subject that Prof. Cairnes has rendered the most signal service to the progress of economic science; and, if we mistake not, his investigations will mark an era in the history of political economy as distinct as, and scarcely less important than, those connected with the names of Ricardo, Malthus, and Mill."—*Athenæum*.

Twelfth Edition, Revised.

NOTES on the PARABLES of OUR LORD. By R. CHENEVIX TRENCH, D.D., Archbishop of Dublin. 8vo, 12*s*. [This day.

A NEW FRENCH DICTIONARY.

A COMPENDIOUS DICTIONARY of the FRENCH LANGUAGE (French-English and English-French). Followed by a List of the Principal Diverging Derivations, and preceded by Chronological and Historical Tables. By GUSTAVE MASSON, Assistant-Master and Librarian, Harrow School. Square half bound, 6*s*. [This day.

This volume, though cast in the same form as other dictionaries, has several distinctive features which increase its value for the student. In the French-English part, etymologies, founded on the researches of Messrs. Littré, Scheler, and Brachet, are given. The list of diverging derivations, at the end of the volume, will be very useful to those who are interested in tracing the various developments of original Latin words. But that which makes it almost indispensable to students of the political and literary history of France, is to be found at the beginning of the work, where M. Masson has drawn up clear and complete tables of historical events, viewed in connection with the developments of literature and language, between the death of Charlemagne, 814 A.D., and that of Louis Philippe, 1850. These tables are illustrated by remarks on the various social moods of which the works produced were the expression. Appended also is a list of the principal Chronicles and Memoirs on the History of France which have appeared up to the present time; the French Republican Calendar, compared with the Gregorian; and a Chronological List of the principal French Newspapers published during the Revolution and the First Empire. We feel sure that all who study this work will allow that the author has signally overcome the lexicographer's natural tendency to dryness. As a dictionary, it is unusually copious, and as a book remarkably handy.

THIRD AND CHEAPER EDITION, SOMEWHAT ABRIDGED.

JOHN COLERIDGE PATTESON'S LIFE. By CHARLOTTE M. YONGE, Author of "The Heir of Redclyffe." With Two Portraits, engraved by Jeens. 2 vols. crown 8vo, 12*s*. [This day.

"Miss Yonge's book is in one respect a model biography. It is made up almost entirely of Patteson's own letters. Aware that he had left his home for once and for all, his correspondence took the shape of a diary, and as we read on we come to know the man, and to love him almost as if we had seen him."—*Athenæum*.

"Such a life, with its grand lessons of unselfishness, is a blessing and an honour to the age in which it is lived. The biography cannot be studied without pleasure and profit; and, indeed, we should think little of the man who did not rise from the study of it better and wiser. Neither the Church nor the Nation which produces such sons need ever despair of its future."—*Saturday Review*.

Nearly ready, No. X. of

The JOURNAL of PHILOLOGY. Edited by W. G. CLARK, M.A., Fellow of Trinity College; J. E. B. MAYOR, M.A., Fellow of St John's College; and W. ALDIS WRIGHT, M.A., Trinity College, Cambridge.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS

is allowed by upwards of 500 Medical Men to be the most effective invention in the curative treatment of Hernia. The use of a steel spring, so often hurtful in its effects, is here avoided; a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, 2 inches below the hips, being sent to the manufacturer,

JOHN WHITE, 228, Piccadilly.

Price of a Single Truss, 16*s.*, 21*s.*, 26*s.* 6*d.*, and 31*s.* 6*d.*
,, Double ,, 31*s.* 6*d.*, 42*s.*, and 52*s.* 6*d.*
,, Umbilical ,, 42*s.* and 52*s.* 6*d.*
} Post-free.

ELASTIC STOCKINGS, KNEE-CAPS,

&c., for Varicose Veins and all cases of weakness and Swellings of the Legs, Sprains, &c. They are porous, light in texture, and inexpensive, and drawn on over an ordinary stocking. Price 4*s.* 6*d.*, 7*s.* 6*d.*, 10*s.*, and 16*s.* each. Postage free.

JOHN WHITE, Manufacturer, 228, Piccadilly, London.

THE *ZOOLOGIST.*

A MONTHLY JOURNAL OF NATURAL HISTORY.

Conducted by EDWARD NEWMAN, F.L.S. F.Z.S. &c.

The Zoologist was established in 1843 to record and preserve observations on subjects similar to those treated of in White's "Natural History of Selborne," and the success which has attended it is sufficient proof that its plan is acceptable to "out-of-door naturalists," those who delight in observing the manners, habits, the private lives, the migrations, movements, nests, young and food of animals. It contains original papers and records of facts relating to Quadrupeds, Birds, Reptiles, Fishes, and Insects, together with notices of recent works on every branch of Natural History. The editor has been assisted by more than two hundred of our very best zoologists.

Published on the First of every Month.

PRICE ONE SHILLING.

London: JOHN VAN VOORST, 1, Paternoster Row.

AGRICULTURAL PUBLICATIONS.

THE PROPORTIONATE FATTENING

and Flesh-forming Qualities of nearly all the Feeding Substances in general use by Farmers: also the Manurial Value of the Residue from each article.

Opinions of the Press.

"It is clearly a very useful indicator of the values of the foods for cattle.—*Athenæum.*

"The chart cannot fail to be very useful to the keepers of horses and meat stock, and it will be an 'eye-opener' to many who will perceive how it is they have been so often disappointed after giving large prices for fancy foods."—*Sporting Times.*

"A very useful table. The system is a very capital one, and we recommend our agricultural friends to invest a shilling, and procure one of the tables published by the Agricultural and Horticultural Association."—*Land and Water.*

Price One Shilling, Post Free.

THE AGRICULTURAL ECONOMIST.

A Monthly Journal, containing Reports and Prices Current of the Agricultural and Horticultural Association, and devoted to the advocacy and encouragement of Co-operation in Agriculture and in general Trading.

Price 6*d.* per month, or 5*s.* per annum, Post Free.

ILLUSTRATED DESCRIPTIVE CATALOGUE MAY BE HAD ON APPLICATION TO

88, New Bond Street, W., London.

JUDSON'S DYES.—18 Colours, 6d. each.

RIBBONS, WOOL, SILK, FEATHERS,

Completely dyed in 10 minutes without soiling the hands.

Full Instructions supplied. Of all Chemists and Stationers.

JUDSON'S DYES.—Dyeing at Home.—JUDSON'S simple DYES are most useful and effectual. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES. Beautiful effects are thus produced in green, pink, brown, and many other colours—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES.—Ferns, Grasses, Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c., by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed.

JUDSON'S DYES.—Ink—Ink—Ink.—A Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water.

JUDSON'S DYES.—For Colouring Architectural Plans, &c —Much trouble may be saved in grinding up colours to a uniform tint. They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades.

JUDSON'S DYES.—For Staining Wood.—Diluted with Water. They sink deeply into the fibre, and will not rub off. They form the most economical stain on record. Light Brown for mahogany colour is excellent; No. 2 Black for walnut, Canary for satin; also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE

Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

THE ONLY CHEAP FARMERS' NEWSPAPER.

THE CHAMBER OF AGRICULTURE JOURNAL AND FARMERS' CHRONICLE,

Edited by JOHN ALGERNON CLARKE, Secretary to the Central Chamber of Agriculture,

Devotes special attention to the discussions and proceedings of the Chambers of Agriculture of Great Britain (which now number upwards of 18,000 members), besides giving original papers on practical farming, and a mass of intelligence of particular value to the agriculturist.

The London Corn, Seed, Hop, Cattle, and other Markets of Monday are specially reported in this Journal, which is despatched the same evening so as to insure delivery to country subscribers by the first post on Tuesday morning. Price 3*d*., or prepaid, 15*s*. a year post free.

Published by W. PICKERING, 21, Arundel Street, Strand, W.C.

HOLLOWAY'S PILLS.—These Pills are more efficacious in strengthening a debilitated constitution than any other medicine in the world , they repress most human diseases, redress all bodily wrongs, and spare much unmerited suffering Persons of a nervous habit of body, and all who labour under weak digestive organs or liver complaints, should lose no time in giving these admirable Pills a fair trial. Coughs, colds, asthma, or shortness of breath, are also within the range of the curative powers of this very remarkable medicine. The cures effected by these Pills are not superficial or temporary, but complete and permanent. They are as mild as they are efficacious, and may be given with confidence to delicate females and young children.

Now ready, Vol. 8, bound in cloth, price 10*s*. 6*d*.

Cloth Cases for binding all the volumes, price 1*s*. 6*d*. each.

Reading Cases to hold 26 numbers, price 2*s*. 6*d*.

To be had through any bookseller or newsagent, or at the Office,

29, BEDFORD STREET, STRAND, W.C.

TO SECRETARIES OF SCIENTIFIC AND LITERARY SOCIETIES.

It having been suggested that the publication of a weekly Diary in NATURE of the Meetings, &c. *of the various provincial* Scientific and Literary Societies *would be found very useful, not only to the Members of such Societies, but to all who are interested in scientific and literary subjects, the Publishers have determined to devote a portion of their Advertisement columns to this purpose, and to insert* NOTICES OF MEETINGS, SUBJECTS OF LECTURES, *&c., at the nominal charge of* One Shilling *for each insertion.*

The Publishers of NATURE *will be glad if the Secretaries of Societies will aid them in their endeavours to make this weekly Diary as complete and useful as possible. Notices intended for insertion therein must be sent, addressed to the* Publishers, *by* Wednesday Mornings.

THE ZOOLOGIST.

A MONTHLY JOURNAL OF NATURAL HISTORY.

Conducted by EDWARD NEWMAN, F.L.S. F.Z.S. &c.

The Zoologist was established in 1843 to record and preserve observations on subjects similar to those treated of in White's "Natural History of Selborne," and the success which has attended it is sufficient proof that its plan is acceptable to "out-of-door naturalists," those who delight in observing the manners, habits, the private lives, the migrations, movements, nests, young and food of animals. It contains original papers and records of facts relating to Quadrupeds, Birds, Reptiles, Fishes, and Insects, together with notices of recent works on every branch of Natural History. The editor has been assisted by more than two hundred of our very best zoologists.

Published on the First of every Month.

PRICE ONE SHILLING.

London: JOHN VAN VOORST, 1, Paternoster Row.

NEWMAN'S ENTOMOLOGIST:

A MONTHLY ILLUSTRATED JOURNAL OF BRITISH INSECTS

Conducted by EDWARD NEWMAN, F.L.S. F.Z.S. &c.,

Late President of the Entomological Society.

The objects of the *Entomologist* are to give every information about Insects; more especially to work out the history of those which attack Fruit and Forest Trees, Vegetables, Root and Seed Crops, Greenhouse and Garden Plants, with a view to suggesting remedies. Notes, Observations, and Queries on every branch of the Science are solicited. To preserve a continuous record of the occurrence of rarities. To improve collections by offering a ready medium for the exchange of specimens.

Published on the First of every Month.

PRICE SIXPENCE.

SIMPKIN, MARSHALL, and Co., Stationers' Hall Court.

THE

JOURNAL OF APPLIED CHEMISTRY,

A MONTHLY PUBLICATION OF 16 *PAGES QUARTO*,

Devoted to Chemistry as applied to Arts and Manufactures, Agriculture Metallurgy, &c. &c.

At Two Dollars and Twenty-five Cents per annum, or One Dollar and Seventy-five Cents paid strictly in advance, including postage to United Kingdom.

Each number contains Original Articles on General Chemistry applied to Arts and Manufactures; Matter on Particular Fabrications, as Petroleum, Soaps, Tanning, Dyeing, and numerous others.

A suitable space is also devoted to Practical Recipes and interesting Scientific Facts.

Full and carefully-prepared Market Reviews and Prices Current of Drugs and Chemicals of every description are given in each number for New York, Boston, and Philadelphia, with Tables of Imports.

EIGHTH VOLUME, commenced with January number.

DEXTER & CO., PUBLISHERS,

Spruce Street, New York; 48, Hanover Street, Boston; and 149, South 4th Street, Philadelphia, Pa., U.S.A.

Third Edition, royal 8vo, cloth extra, 21*s*.

SPECTRUM ANALYSIS. By Professor ROSCOE, F.R.S. With Appendices, Engravings, Maps, and Chromolithographs.

"The illustrations—no unimportant part of a book on such a subject—are marvels of wood-printing, and reflect the clearness which is the distinguishing merit of Mr. Roscoe's explanations."—*Saturday Review*.

"The lectures themselves furnish a most admirable elementary treatise on the subject, whilst by the insertion in appendices to each lecture of extracts from the most important published memoirs, the author has rendered it equally valuable as a text-book for advanced students."—*Westminster Review*.

MACMILLAN & CO., LONDON.

Just Published. 8vo. Price 14*s*.

A MANUAL OF THE CHEMISTRY OF THE CARBON COMPOUNDS; OR, ORGANIC CHEMISTRY.

By C. SCHORLEMMER, F.R.S.,

LECTURER ON ORGANIC CHEMISTRY IN THE OWENS COLLEGE, MANCHESTER.

"Nor is Mr. Schorlemmer appreciated by the profession for his experimental researches only; his fame is even more widely spread by his 'Manual of Organic Chemistry.' This is one of the favourite works from which the present generation of young chemists derive their information. Having myself to teach a large class of students, I have continuous opportunities of recommending this work and of observing the benefit derived from this recommendation."—PROF. HOFMANN.

London: MACMILLAN AND CO.

NEW BOOKS.

TELEGRAPH and TRAVEL. A Narrative of the Formation and Development of Telegraphic Communication between England and India, under the Orders of Her Majesty's Government, with Incidental Notices of the Countries through which the Lines pass. By Colonel Sir FREDERIC GOLDSMID, C.B. K.C.S.I., late Director of the Government Indo-European Telegraph. *With numerous Illustrations and Maps*, 8vo. [Immediately.

ESSAYS and ADDRESSES, by PROFESSORS and LECTURERS of Owens College, Manchester. Published in Commemoration of the Opening of the New College Buildings, October 7th, 1873 8vo, 14*s*. [This day.

Among the contributors to this volume are the following:—The Duke of Devonshire, K.G. F.R.S., Prof. Greenwood (Principal), Prof. Roscoe, F.R.S., Prof. Balfour Stewart, F.R.S., Prof. Williamson, F.R.S., Prof. Gamgee, F.R.S., Prof. Bryce, D.C.L., Prof. Jevons, F.R.S., &c.

The BIRDS of ARISTOPHANES. Translated into English Verse, with Introduction, Notes, and Appendices, by B. H. KENNEDY, D.D., Regius Professor of Greek in the University of Cambridge. Crown 8vo, 6*s*. [Just ready.

HORÆ HELLENICÆ. Essays and Discussions on some Important Points of Greek Philology and Antiquity. By JOHN STUART BLACKIE, F.R.S.E., Professor of Greek in the University of Edinburgh. 8vo, 12*s*. [This day.

SOME LEADING PRINCIPLES of POLITICAL ECONOMY newly EXPOUNDED. By J. E. CAIRNES, M.A., Emeritus Professor of Political Economy in University College, London. 8vo, 14*s*. [This day.

"It is with great pleasure that we welcome another contribution to political economy from the ablest living representative of the school of Ricardo and Mill."—*Saturday Review.*

"The most important part of this volume is that which deals with cost of production and of value as determined by cost. It is on this subject that Prof. Cairnes has rendered the most signal service to the progress of economic science; and, if we mistake not, his investigations will mark an era in the history of political economy as distinct as, and scarcely less important than, those connected with the names of Ricardo, Malthus, and Mill."—*Athenæum.*

WORDSWORTH, SHELLEY, KEATS, and other ESSAYS. By Professor MASSON, Crown 8vo. [Immediately.

THOUGHTS on REVELATION. By JOHN M'LEOD CAMPBELL, D.D. Second Edition, crown 8vo, 5*s*. [This day.

BIRDS: their Cages and their Keep. By Lady DICKEY. With Illustrations. Crown 8vo. [Shortly.

NEW VOLUME OF "*NATURE* SERIES."

The TRANSIT of VENUS. By George FORBES, B.A., Professor of Natural Philosophy in the Andersonian University, Glasgow. With numerous Illustrations, crown 8vo. [Shortly.

NEW VOLUME OF "SCIENCE PRIMERS."

PRIMER of PHYSIOLOGY. By Michael FOSTER, F.R.S. With Illustrations, 18mo. [Shortly.

NEW VOLUME OF "THE GOLDEN TREASURY SERIES."

SCOTTISH SONG.—A Selection of the Choicest LYRICS of SCOTLAND. Compiled and Arranged, with Brief Notes, by MARY CARLYLE AITKEN. 18mo, 4*s*. 6*d*. [This day.

Twelfth Edition, Revised.

NOTES on the PARABLES of OUR LORD. By R. CHENEVIX TRENCH, D.D., Archbishop of Dublin. 8vo, 12*s*. [This day.

A NEW FRENCH DICTIONARY.

A COMPENDIOUS DICTIONARY of the FRENCH LANGUAGE (French-English and English-French). Followed by a List of the Principal Diverging Derivations, and preceded by Chronological and Historical Tables. By GUSTAVE MASSON, Assistant-Master and Librarian, Harrow School. Square half bound, 6*s*. [This day.

This volume, though cast in the same form as other dictionaries, has several distinctive features which increase its value for the student. In the French-English part, etymologies, founded on the researches of Messrs. Littré, Scheler, and Brachet, are given. The list of diverging derivations, at the end of the volume, will be very useful to those who are interested in tracing the various developments of original Latin words. But that which makes it almost indispensable to students of the political and literary history of France, is to be found at the beginning of the work, where M. Masson has drawn up clear and complete tables of historical events, viewed in connection with the developments of literature and language, between the death of Charlemagne, 814 A.D., and that of Louis Philippe, 1850. These tables are illustrated by remarks on the various social moods of which the works produced were the expression. Appended also is a list of the principal Chronicles and Memoirs on the History of France which have appeared up to the present time; the French Republican Calendar, compared with the Gregorian; and a Chronological List of the principal French Newspapers published during the Revolution and the First Empire. We feel sure that all who study this work will allow that the author has signally overcome the lexicographer's natural tendency to dryness. As a dictionary, it is unusually copious, and as a book remarkably handy.

THIRD AND CHEAPER EDITION, SOMEWHAT ABRIDGED.

JOHN COLERIDGE PATTESON'S LIFE. By CHARLOTTE M. YONGE, Author of "The Heir of Redclyffe." With Two Portraits, engraved by Jeens. 2 vols. crown 8vo, 12*s*. [This day.

"Miss Yonge's book is in one respect a model biography. It is made up almost entirely of Patteson's own letters. Aware that he had left his home for once and for all, his correspondence took the shape of a diary, and as we read on we come to know the man, and to love him almost as if we had seen him."—*Athenæum.*

"Such a life, with its grand lessons of unselfishness, is a blessing and an honour to the age in which it is lived: the biography cannot be studied without pleasure and profit; and, indeed, we should think little of the man who did not rise from the study of it better and wiser. Neither the Church nor the Nation which produces such sons need ever despair of its future."—*Saturday Review.*

Nearly ready, No. X. of

The JOURNAL of PHILOLOGY. Edited by W. G. CLARK, M.A., Fellow of Trinity College; J. E. B. MAYOR, M.A., Fellow of St. John's College; and W. ALDIS WRIGHT, M.A., Trinity College, Cambridge.

Contents:—

On Glossology (continued). The late Professor Grote.
On the Word [illegible] in the Equites of Aristophanes, v. 89. W. H. Thompson.

On the Sixth Letter of Isokrates. R. C. Jebb.
On the Homeric Words [illegible]. F. A. Paley.
On the Etymology of certain Words in English terminating in *SH* and *SK*. Eiríkr Magnússon.
Love Amor. Love Nought. Eiríkr Magnússon.
Catullus's 54th Poem. H. A. J. Munro.

MACMILLAN & CO., LONDON.

MACMILLAN & CO.'S

GOLDEN TREASURY SERIES.

Uniformly Printed in 18mo., with Vignette Titles by Sir NOEL PATON, T. WOOLNER, W. HOLMAN HUNT, J. E. MILLAIS, ARTHUR HUGHES, &c. Engraved on Steel by JEENS. Bound in extra cloth, 4*s.* 6*d.* each volume. Also kept in morocco and calf bindings.

"*Messrs. Macmillan have, in their Golden Treasury Series, especially provided editions of standard works, volumes of selected poetry, and original compositions, which entitle this series to be called classical. Nothing can be better than the literary execution, nothing more elegant than the material workmanship.*"—British Quarterly Review.

The Golden Treasury of the Best Songs and Lyrical Poems in the English Language. Selected and arranged, with Notes, by FRANCIS TURNER PALGRAVE.

"*This delightful little volume, the Golden Treasury, which contains many of the best original lyric pieces and songs in our language, grouped with care and skill, so as to illustrate each other like the pictures in a well-arranged gallery.*"—Quarterly Review.

The Children's Garland from the best Poets. Selected and arranged by Coventry Patmore.

"*It includes specimens of all the great masters in the art of poetry, selected with the matured judgment of a man concentrated on obtaining insight into the feelings and tastes of childhood, and desirous to awaken its finest impulses, to cultivate its keenest sensibilities.*"—Morning Post.

The Book of Praise. From the best English Hymn Writers. Selected and arranged by Sir ROUNDELL PALMER. A New and Enlarged Edition.

The Fairy Book; the best Popular Fairy Stories. Selected and rendered anew by the Author of "John Halifax, Gentleman."

"*A delightful selection, in a delightful external form; full of the physical splendour and vast opulence of proper fairy tales.*"—Spectator.

The Ballad Book. A Selection of the Choicest British Ballads. Edited by William ALLINGHAM.

"*His taste as a judge of old poetry will be found, by all acquainted with the various readings of old English ballads, true enough to justify his undertaking so critical a task.*"—Saturday Review.

The Jest Book. The Choicest Anecdotes and Sayings. Selected and arranged by Mark LEMON.

"*The fullest and best jest book that has yet appeared.*"—Saturday Review.

Bacon's Essays and Colours of Good and Evil. With Notes and Glossarial Index. By W. ALDIS WRIGHT, M.A.

The Pilgrim's Progress from this World to that which is to come. By John Bunyan.

"*A beautiful and scholarly print.*"—Spectator.

The Sunday Book of Poetry for the Young. Selected and arranged by C. F. Alexander.

"*A well-selected volume of sacred poetry.*"—Spectator.

A Book of Golden Deeds of all Times and all Countries. Gathered and narrated anew. By the Author of "The Heir of Redclyffe."

The Poetical Works of Robert Burns. Edited, with Biographical Memoir, Notes, and Glossary, by Alexander Smith. Two vols.

The Adventures of Robinson Crusoe. Edited from the Original Edition by J. W. Clark, M.A., Fellow of Trinity College, Cambridge.

The Republic of Plato. Translated into English, with Notes by J. Ll. Davies, M.A., and D. J. VAUGHAN, M.A.

The Song Book. Words and Tunes from the best Poets and Musicians. Selected and arranged by John Hullah, Professor of Vocal Music in King's College, London.

La Lyre Francaise. Selected and arranged, with Notes, by Gustave Masson, French Master in Harrow School.

Tom Brown's School Days. By An Old Boy.

A Book of Worthies. Gathered from the Old Histories and written anew by the Author of "The Heir of Redclyffe."

PROFESSORSHIP IN BIOLOGY.

DURHAM UNIVERSITY COLLEGES of

MEDICINE and PHYSICAL SCIENCE, Newcastle-upon-Tyne —It is proposed to establish a Chair of Biology combined with Physiology, in connection with the above Institutions, in October next. Salary £450, with a portion of fees Candidates for the office are invited to apply (with testimonials) to Theo Wood Bunning, Secretary to the College of Physical Science, Newcastle, before the 15th August next, from whom full particulars as to duties, &c , may be obtained.

CHEMICAL SOCIETY.

An INDEX to the JOURNAL of the CHEMICAL SOCIETY,

1841–1872, is now ready, including both Authors Names and Subjects. It may be obtained by Fellows at the Society's Rooms, price 5s , by post 5s 4d ; and by Non-Fellows at the Publisher's, J. Van Voorst, 1, Paternoster Row, price 10s.

The JOURNAL of the CHEMICAL SOCIETY

now contains Abstracts of all Papers on Chemistry, and its relations to Physiology and the Arts, published in British or Foreign Journals. It is issued monthly, and may be obtained by Non-Fellows of Mr Van Voorst by a subscription of £1 1s.

TWO SCHOLARSHIPS and an EXHIBITION

in Natural Science, and a SCHOLARSHIP and EXHIBITION in Classics and Mathematics, will be awarded by Open Competition in the First Week of October next, at St Mary's Hospital Medical School. For particulars apply to the Dean of the School,

A. B. SHEPHERD, M.B.

QUEENWOOD COLLEGE, near STOCKBRIDGE, HANTS.

Sound General Education for Boys

Special attention to Science, particularly to Chemistry, both theoretical and practical

DRAPER'S INK (DICHROIC).

THE NEW BLACK INK

DIFFERING FROM ANYTHING ELSE EVER PRODUCED.

Writing becomes a pleasure when this Ink is used. It has been adopted by the principal Banks, Public Offices, and Railway Companies throughout Ireland.

It writes almost instantly Full Black.
Does not corrode Steel Pens.
Is cleanly to use, and not liable to Blot.

Flows easily from the Pen.
Blotting-paper may be applied at the moment of writing.

TO BE HAD OF ALL STATIONERS.

FRY'S

VIENNA EXHIBITION
MEDAL FOR PROGRESS,
Awarded to J. S. FRY & SONS.

CARACAS

Owes its delicious flavour to the choice Caracas and other Cocoas with which it is manufactured.

COCOA

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS

is allowed by upwards of 500 Medical Men to be the most effective invention in the curative treatment of Hernia. The use of a steel spring, so often hurtful in its effects, is here avoided; a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, 2 inches below the hips, being sent to the manufacturer,

JOHN WHITE, 228, Piccadilly.

Price of a Single Truss, 16s., 21s., 26s. 6d., and 31s. 6d.
„ Double „ 31s. 6d., 42s., and 52s. 6d.
„ Umbilical „ 42s. and 52s. 6d.
Post-free.

ELASTIC STOCKINGS, KNEE-CAPS, &c., for Varicose Veins and all cases of weakness and Swellings of the Legs, Sprains, &c. They are porous, light in texture, and inexpensive, and drawn on over an ordinary stocking. Price 4s. 6d., 7s. 6d., 10s., and 16s. each. Postage free.

JOHN WHITE, Manufacturer, 228, Piccadilly, London.

In 18mo, cloth, price 1s 6d.

INTRODUCTION TO IRISH FARMING.

BY

THOMAS BALDWIN, M.R.I.A.,

Superintendent of the Agricultural Department of National Education in Ireland, and Author of various Treatises on Agriculture.

CONTENTS:—

CHAPTER I.

MANURES

1. How Land becomes Exhausted
2. Farmyard Manure
3. Liquid Manure
4. Artifical Manures
5. Lime

CHAPTER II.

THE CROPS TO GROW, AND HOW TO GROW THEM

1. The Potato
2. Carrots and Parsnips
3. Turnips and Mangold Wurtzel
4. Cabbage and Rape
5. Grain Crops
6. Beans and Peas
7. Forage and Herbage Crops
8. Clovers
9. The Grasses
10. Haymaking
11. On Flax

CHAPTER III.

LIVE STOCK

1. On the Food of Animals
2. The several kinds of Cattle suited to Irish Farmers

CHAPTER III (*Continued*)

3. On the Rearing of Calves
4. The Feeding of Milch Cows
5. On Dairy Management
6. On the Fattening of Cattle
7. The Farm Horse
8. On Sheep
9. On Swine
10. On Poultry

CHAPTER IV.

EXAMPLES OF SUCCESSFUL FARMING

1. A Farm of Five and a half Acres
2. One-horse Farms
3. Two-horse Farms
4. A Farm of 140 Acres of Good Deep Land
5. A few General Considerations on the Climate and other Matters affecting Irish Agriculture
6. Examples on a Large Scale of the Foregoing Argument
7. A Farm of 2,200 Acres in County Mayo
8. On the Reclamation and Management of a Large Tract of Land

CHAPTER V.

COTTAGE GARDENING

A few SELECTIONS from NOTICES of the First Edition of Professor BALDWIN'S WORK on

IRISH AGRICULTURE.

"The information it gives is sound and good. The book proves the author is well qualified to fill the important office which he holds."—JOHN CHALMERS MORTON, Esq., Editor of *Cyclopædia of Agriculture, &c.*

"Pregnant with useful information for farmers of this country. If the rising generation be instructed and well grounded in what it sets forth, we have no fear for the result."—*Irish Farmer's Gazette.*

"It is one of the best and most useful books published by the Board, combining science with practice. It is just the work which suits the classes for which it is intended. It is written with remarkable perspicuity."—*Freeman's Journal.*

"To landlords, agents, and farmers, large and small, we most heartily recommend Mr. Baldwin's book."—*Irish Farmer and Sportsman.*

"This work is just what the small farmer requires."—*The Newry Examiner.*

"We would wish to notice at greater length this really valuable little manual, which cannot be too highly praised, or too strongly recommended to the study of our friends, the small farmers of Ireland. We heartily congratulate Mr. Baldwin on the success he has achieved, and welcome his little work as a most valuable contribution to agricultural literature."—*Nation.*

"This is one of the most useful little volumes which we have ever had before us, and one which no student of agriculture should be without."—*Leinster Express.*

"No farmer should be without a copy of this treatise, which is plainly written, and pregnant with information."—*Irish Times.*

"It ought to be in the possession of every farmer."—*Cork Examiner.*

"We would wish to see thousands of copies purchased by those who have the means, and distributed amongst those small farmers to whom it may otherwise be as a sealed book."—*Dublin Evening Post.*

"This treatise is sound, and comes very seasonably, when the Irish farmer has every inducement to improve his practice."—*The Field*

"Mr. Baldwin's books are thoroughly trustworthy. His subjects are treated in a masterly manner. May be heartily recommended as well-packed store-rooms of agricultural facts."—*Gardeners' Chronicle and Agricultural Gazette.*

"We strongly recommend Mr. Baldwin's books to the farmers. We admire their lucidity and arrangement."—*Waterford Mail.*

London: MACMILLAN & CO.

THE ONLY CHEAP FARMERS' NEWSPAPER.

THE CHAMBER OF AGRICULTURE JOURNAL AND FARMERS' CHRONICLE,

Edited by JOHN ALGERNON CLARKE, Secretary to the Central Chamber of Agriculture,

Devotes special attention to the discussions and proceedings of the Chambers of Agriculture of Great Britain (which now number upwards of 18,000 members), besides giving original papers on practical farming, and a mass of intelligence of particular value to the agriculturist.

The London Corn, Seed, Hop, Cattle, and other Markets of Monday are specially reported in this Journal, which is despatched the same evening so as to insure delivery to country subscribers by the first post on Tuesday morning. Price 3d.; or prepaid, 15s. a year post free.

Published by W. PICKERING, 21, Arundel Street, Strand, W.C.

THE ENTOMOLOGIST'S MONTHLY MAGAZINE.

Price Sixpence, monthly, 24 pages 8vo., with occasional Illustrations.
Conducted by J. W. DOUGLAS, R. MCLACHLAN, F.L.S., E. C. RYE, and H. T. STAINTON, F.R.S., &c.

This Magazine, commenced in 1864, contains standard articles and notes on all subjects connected with Entomology, and especially on the Insects of the British Isles.

Subscription—Six Shillings per Volume, post-free. The volumes commence with the June number in each year.

Vols. I. to V. (strongly bound in cloth) may be obtained by purchasers of the entire set to date, at the increased price of 10s. each; the succeeding vols. may be had separately or together at 7s. each.

London: JOHN VAN VOORST, 1, Paternoster Row.

N.B.—Communications, &c., should be sent to the Editors at the above address.

AGRICULTURAL PUBLICATIONS.

THE PROPORTIONATE FATTENING

and Flesh-forming Qualities of nearly all the Feeding Substances in general use by Farmers: also the Manurial Value of the Residue from each article.

Opinions of the Press.

"It is clearly a very useful indicator of the values of the foods for cattle.—*Athenæum.*

"The chart cannot fail to be very useful to the keepers of horses and meat stock, and it will be an 'eye-opener' to many who will perceive how it is they have been so often disappointed after giving large prices for fancy foods."—*Sporting Times.*

"A very useful table. The system is a very capital one, and we recommend our agricultural friends to invest a shilling, and procure one of the tables published by the Agricultural and Horticultural Association."—*Land and Water.*

Price One Shilling, Post Free.

THE AGRICULTURAL ECONOMIST.

A Monthly Journal, containing Reports and Prices Current of the Agricultural and Horticultural Association, and devoted to the advocacy and encouragement of Co-operation in Agriculture and in general Trading.

Price 6d. per month, or 5s. per annum, Post Free.

Vols. I., II., and III. of the "Agricultural Economist" for 1870, 1871, and 1872, price 7s. 6d. each

PREPARING FOR PUBLICATION (*Second Edition*).

THE MINERAL CONSTITUENTS REMOVED FROM AN ACRE OF SOIL

by an Average Crop of Wheat, Oats, Barley, Turnips, &c.; also the Proportionate Refertilising Effects of Guano, Superphosphates, Potash, Salts, Farmyard Manure, &c. Price One Shilling post free.

London: 176, FLEET STREET, E.C., and 47, MILLBANK STREET, S.W.

HOLLOWAY'S PILLS.—In general debility, mental depression, and nervous irritability, there is no medicine which operates so like a charm as these Pills. They purify the blood, soothe and strengthen the nerves and system, give tone to the stomach, elevate the spirits, and, in fact, make the patient sensible of a total and most delightful revolution in his whole system. They may be commended most unreservedly as the very best family medicine in existence. Though so powerfully efficacious, they are singularly mild in their operation, and might be given with perfect confidence to delicate women and young children. They contain not a grain of mercury or any other noxious substance, and cannot do harm. Delicate females and all persons of sedentary habits will find these Pills a blessing.

THE EXTENSION

OF THE

SUB-WEALDEN EXPLORATION

At Netherfield, near Battle.

COMMITTEE.

Professor RAMSAY, LL.D. F.R.S., Director-General of Geological Survey.
Sir PHILLIP DE GRAY MALPAS EGERTON, Bart., M.P. F.R.S. F.G.S.
Sir JOHN LUBBOCK, Bart., M.P. F.R.S. F.L.S. F.G.S.
Sir JOHN HAWKSHAW, C.E., 33, Great George Street, Westminster.
JOHN EVANS, Esq., F.R.S. F.G.S., President of Geological Society.
R. GODWIN-AUSTEN, F.R.S., President of Section C, British Association, 1872.
JOSEPH PRESTWICH, Esq., F.R.S., Ex-President of the Geological Society of London.
WARINGTON SMYTH, Esq., F.R.S., Chief Inspector of Crown Mines.
H. W. BRISTOW, Esq., F.R.S., Director of Geological Survey.
THOMAS HAWKSLEY, Esq., Ex-President of the Institute of Civil Engineers.
W. BOYD DAWKINS, Esq., M.A. F.R.S. F.G.S., Owens College, Manchester.
W. TOPLEY, Esq., F.G.S., Geological Survey of England.
Professor RUPERT JONES, F.G.S., Royal Military College, Sandhurst.
H. WOODWARD, Esq., F.R.S., British Museum.
S. OWENS, Esq., Whitefriars, Fleet Street.
ROBERT ETHERIDGE, Esq., Jermyn Street Museum, Hon. Sec. (*pro. tem.*)
HENRY WILLETT, Esq., F.G.S., Arnold House, Brighton.

The object of this work, commenced on the occasion of the meeting of the British Association at Brighton in 1872, is to ascertain the thickness of the Secondary Strata in the Wealden area, and the depth and nature of the underlying Palæozoic Formations.

These latter, consisting of the Silurian, Devonian, and Carboniferous series, rise to the surface in Belgium, where the coal is largely worked; they pass under the chalk in the north of France, and reappear in Somersetshire and South Wales. They therefore range under the south-east of England at a depth now sought to be ascertained, and there is reason to believe that they lie at a depth not exceeding 1,500 to 2,000 ft. at Battle.

This determination, therefore, of the underground structure of the Wealden, is a point of great scientific interest, and one of *great national and economical importance*, as it may help to indicate the line taken underground by the coal-measures of Belgium and Somerset.

A sum of £3,000 has been collected by private subscription, and spent in this research, and a depth of 1,000 ft. reached, but as yet without any positive result. The beds traversed belong to the Lower Wealden, Purbeck and Portland series, Kimmeridge clay, and the boring has now reached the Oxford clay.

It is most desirable that the work should not be discontinued in the present stage for want of funds, and the Committee therefore make an earnest appeal for further assistance.

HENRY WILLETT, Esq., of Arnold House, Brighton, who has so energetically superintended the work, has kindly consented, at the special request of the Committee, to receive Subscriptions, and to continue to act as Treasurer and Honorary Secretary.

Signed, on behalf of the Committee,

ANDREW RAMSAY,
JOHN EVANS,
JOSEPH PRESTWICH,

THE ZOOLOGIST.

A MONTHLY JOURNAL OF NATURAL HISTORY.

Conducted by EDWARD NEWMAN, F.L.S. F.Z.S. &c.

The Zoologist was established in 1843 to record and preserve observations on subjects similar to those treated of in White's "Natural History of Selborne," and the success which has attended it is sufficient proof that its plan is acceptable to "out-of-door naturalists," those who delight in observing the manners, habits, the private lives, the migrations, movements, nests, young and food of animals. It contains original papers and records of facts relating to Quadrupeds, Birds, Reptiles, Fishes, and Insects, together with notices of recent works on every branch of Natural History. The editor has been assisted by more than two hundred of our very best zoologists.

Published on the First of every Month.

PRICE ONE SHILLING.

London: JOHN VAN VOORST, 1, Paternoster Row.

TO SECRETARIES OF SCIENTIFIC AND LITERARY SOCIETIES.

It having been suggested that the publication of a weekly Diary in NATURE of the Meetings, &c. *of the various provincial* Scientific and Literary Societies *would be found very useful, not only to the Members of such Societies, but to all who are interested in scientific and literary subjects, the Publishers have determined to devote a portion of their Advertisement columns to this purpose, and to insert* NOTICES OF MEETINGS, SUBJECTS OF LECTURES, *&c., at the nominal charge of* One Shilling *for each insertion.*

The Publishers of NATURE *will be glad if the Secretaries of Societies will aid them in their endeavours to make this weekly Diary as complete and useful as possible. Notices intended for insertion therein must be sent, addressed to the* Publishers, *by* Wednesday Mornings.

WORKS BY I. TODHUNTER, M.A., F.R.S.

"Perspicuous language, vigorous investigations, scrutiny of difficulties, and methodical treatment, characterise Mr. Todhunter's works."—*Civil Engineer.*

ALGEBRA. For the Use of Colleges and Schools. Sixth Edition. Crown 8vo, cloth. 7*s*. 6*d*.

This work contains all the propositions which are usually included in elementary treatises on Algebra, and a large number of Examples for Exercise. The author has sought to render the work easily intelligible to students, without impairing the accuracy of the demonstrations, or contracting the limits of the subject. The Examples, about sixteen hundred and fifty in number, have been selected with a view to illustrate every part of the subject. The work will be found peculiarly adapted to the wants of students who are without the aid of a teacher. The Answers to the Examples, with hints for the solution of some in which assistance may be needed, are given at the end of the book. In the present edition two New Chapters and Three Hundred miscellaneous Examples have been added.

KEY to ALGEBRA for the USE of COLLEGES and SCHOOLS. Crown 8vo., 10s. 6d.

An ELEMENTARY TREATISE on the THEORY of EQUATIONS. Second Edition, revised. Crown 8vo, cloth, 7*s*. 6*d*.

This treatise contains all the propositions which are usually included in elementary treatises on the theory of Equations, together with Examples for exercise. These have been selected from the College and University Examination Papers, and the results have been given when it appeared necessary. In order to exhibit a comprehensive view of the subject, the treatise includes investigations which are not found in all the preceding elementary treatises, and also some investigations which are not to be found in any of them. For the second edition the work has been revised and some additions have been made, the most important being an account of the Researches of Prof. Sylvester respecting Newton's Rule.

PLANE TRIGONOMETRY. For Schools and Colleges. Fourth Edition. Crown 8vo, cloth, 5*s*.

The design of this work has been to render the subject intelligible to beginners, and at the same time to afford the student the opportunity of obtaining all the information which he will require on this branch of Mathematics. Each chapter is followed by a set of Examples; those which are entitled Miscellaneous Examples, together with a few in some of the other sets, may be advantageously reserved by the student for exercise after he has made some progress in the subject. In the Second Edition the hints for the solution of the Examples have been considerably increased.

A TREATISE on SPHERICAL TRIGONOMETRY. Third Edition, enlarged. Crown 8vo, cloth, 4*s*. 6*d*.

The present work is constructed on the same plan as the treatise on Plane Trigonometry, to which it is intended as a sequel In the account of Napier's Rules of circular parts, an explanation has been given of a method of proof devised by Napier, which seems to have been overlooked by most modern writers on the subject. Considerable labour has been bestowed on the text in order to render it comprehensive and accurate, and the Examples (selected chiefly from College Examination Papers) have all been carefully verified.

PLANE CO-ORDINATE GEOMETRY, as applied to the Straight Line and the Conic Sections. With numerous Examples. Fourth Edition, revised and enlarged. Crown 8vo, cloth, 7*s*. 6*d*.

The author has here endeavoured to exhibit the subject in a simple manner for the benefit of beginners, and at the same time to include in one volume all that students usually require. In addition, therefore, to the propositions which have always appeared in such treatises, he has introduced the methods of abridged notation, which are of more recent origin; these methods, which are of a less elementary character than the rest of the work, are placed in separate chapters, and may be omitted by the student at first.

A TREATISE on the DIFFERENTIAL CALCULUS. With numerous Examples. Sixth Edition. Crown 8vo, cloth, 10*s*. 6*d*.

The author has endeavoured in the present work to exhibit a comprehensive view of the Differential Calculus on the method of limits. In the more elementary portions he has entered into considerable detail in the explanations, with the hope that a reader who is without the assistance of a tutor may be enabled to acquire a competent acquaintance with the subject. The method adopted is that of Differential Coefficients. To the different chapters are appended Examples sufficiently numerous to render another book unnecessary; these Examples being mostly selected from College Examination Papers. This and the following work have been translated into Italian by Prof. Battaglini.

A TREATISE on the INTEGRAL CALCULUS and its APPLICATIONS. With numerous Examples. Fourth Edition, revised and enlarged. Crown 8vo, cloth, 10*s*. 6*d*.

This is designed as a work at once elementary and complete, adapted for the use of beginners, and sufficient for the wants of advanced students. In the selection of the propositions, and in the mode of establishing them, it has been sought to exhibit the principles clearly, and to illustrate all their most important results. The process of summation has been repeatedly brought forward, with the view of securing the attention of the student to the notions which form the true foundation of the Calculus itself, as well as of its most valuable applications. Every attempt has been made to explain those difficulties which usually perplex beginners, especially with reference to the *limits* of integrations. A new method has been adopted in regard to the transformation of multiple integrals. The last chapter deals with the Calculus of Variations. A large collection of Exercises, selected from College Examination Papers, has been appended to the several chapters.

EXAMPLES of ANALYTICAL GEOMETRY of THREE DIMENSIONS. Third Edition, revised. Crown 8vo, cloth, 4*s*.

MACMILLAN & CO., LONDON.

JUDSON'S DYES.—18 Colours, 6d. each.

RIBBONS, WOOL, SILK, FEATHERS,

Completely dyed in 10 minutes without soiling the hands.

Full Instructions supplied. Of all Chemists and Stationers.

JUDSON'S DYES.—Dyeing at Home.—JUDSON'S simple DYES are most useful and effectual. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES. Beautiful effects are thus produced in green, pink, brown, and many other colours.—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES.—Ferns, Grasses, Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c., by simply dipping them in a solution of JUDSON'S DYES Charming Bouquet may be thus composed.

JUDSON'S DYES.—Ink—Ink—Ink.—A Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water.

JUDSON'S DYES.—For Colouring Architectural Plans, &c.—Much trouble may be saved in grinding up colours to a uniform tint. They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades.

JUDSON'S DYES.—For Staining Wood.—Diluted with Water They sink deeply into the fibre, and will not rub off. They form the most economical stain on record. Light Brown for mahogany colour is excellent; No. 2 Black for walnut; Canary for satin, also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE

Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

In royal 8vo, cloth extra gilt, price 31s. 6d.

CONTRIBUTIONS to SOLAR PHYSICS.

By J. NORMAN LOCKYER, F.R.S. I. A Popular Account of Inquiries into the Physical Constitution of the Sun, with especial reference to Recent Spectroscopic Researches. II. Communications to the Royal Society of London and the French Academy of Sciences, with Notes. Illustrated by 7 Coloured Lithographic Plates and 175 Woodcuts

"The first part of the work, presenting the reader with a continuous sketch of the history of the various inquiries into the physical constitution of the sun, cannot fail to be of interest to all who care for the revelations of modern science, and the interest will be enhanced by the excellence of the numerous illustrations by which it is accompanied"—*Athenæum.*

"The book may be taken as an authentic exposition of the present state of science in connexion with the important subject of spectroscopic analysis. . . . Even the unscientific public may derive much information from it."—*Daily News.*

"THE GARDEN,"

A Weekly Illustrated Journal devoted solely to Horticulture in all its Branches.

"THE GARDEN" is conducted by WILLIAM ROBINSON, F.L.S., Author of "Hardy Flowers," "Alpine Flowers for English Gardens," "The Parks, Promenades, and Gardens of Paris," &c.; and the best Writers in every Department of Gardening are contributors to its pages.

The following are some of the subjects regularly treated of in its pages—

The Flower Garden.
Landscape Gardening.
The Fruit Garden.
Garden Structures.
Room and Window Gardens.
Notes and Questions.
Market Gardening.
Trees and Shrubs.
Hardy Flowers.
Town Gardens.
The Conservatory.
Public Gardens.
The Greenhouse and Stove.
The Household.
The Wild Garden.
The Kitchen Garden.

"THE GARDEN" may be obtained through all Newsagents and at the Railway Bookstalls, at 4d. per Copy. It may also be had direct from the Office at 5s. for a Quarter, 9s. 9d. for a Half-year, and 19s. 6d. for a Year, payable in advance, and in Monthly Parts. Specimen Copies (post-free), 4½d.

37, Southampton Street, Covent Garden, S.W.

THE

JOURNAL OF APPLIED CHEMISTRY,

A MONTHLY PUBLICATION OF 16 PAGES QUARTO,

Devoted to Chemistry as applied to Arts and Manufactures, Agriculture Metallurgy, &c. &c.

At Two Dollars and Twenty-five Cents per annum, or One Dollar and Seventy-five Cents paid strictly in advance, including postage to United Kingdom.

Each number contains Original Articles on General Chemistry applied to Arts and Manufactures; Matter on Particular Fabrications, as Petroleum, Soaps, Tanning, Dyeing, and numerous others.

A suitable space is also devoted to Practical Recipes and interesting Scientific Facts.

Full and carefully-prepared Market Reviews and Prices Current of Drugs and Chemicals of every description are given in each number for New York, Boston, and Philadelphia, with Tables of Imports.

EIGHTH VOLUME, commenced with January number.

BRITISH ASSOCIATION for the ADVANCEMENT OF SCIENCE,

22, Albemarle Street, London, W.

The NEXT ANNUAL GENERAL MEETING will be held at BELFAST, commencing on WEDNESDAY, August 19

President-Elect,

Professor TYNDALL, D.C.L. LL.D. F.R.S. F.C.S.

NOTICE TO CONTRIBUTORS OF MEMOIRS.—Authors are reminded that, under an arrangement dating from 1871, the acceptance of Memoirs, and the days on which they are to be read, are now, as far as possible, determined by Organising Committees for the several Sections before the beginning of the Meeting. It has therefore become necessary, in order to give an opportunity to the Committees of doing justice to the several communications, that each Author should prepare an Abstract of his Memoir, of a length suitable for insertion in the published Transactions of the Association, and that he should send it, together with the original Memoir, by book-post, on or before August 1, addressed thus:—"General Secretaries, British Association, 22, Albemarle Street, London, W. For Section. . . . . . ." If it should be inconvenient to the Author that his paper should be read on any particular day, he is requested to send information thereof to the Secretaries in a separate note.

G. GRIFFITH, M.A.,
Assistant General Secretary, Harrow.

GEOLOGICAL MINERALOGY.—SIX

ELEMENTARY LECTURES on ROCKS and METALLIC MINERALS, adapted to a Juvenile Audience, will be given by Professor TENNANT, at his residence, 149, Strand, W.C., on AUGUST, 3, 4, 5, 6, 7, and 8, at 10 a.m. and 3 p.m. Terms—Half a Guinea for the Course.

Professor TENNANT will probably afterwards repeat the Elementary Lectures on Mineralogy and Geology given during last Easter and Christmas Holidays

PROFESSORSHIP IN BIOLOGY.

DURHAM UNIVERSITY COLLEGES of

MEDICINE and PHYSICAL SCIENCE, Newcastle-upon-Tyne.—It is proposed to establish a Chair of Biology combined with Physiology, in connection with the above Institutions, in October next. Salary £450, with a portion of fees. Candidates for the office are invited to apply (with testimonials) to Theo. Wood Bunning, Secretary to the College of Physical Science, Newcastle, before the 15th August next, from whom full particulars as to duties, &c., may be obtained

TWO SCHOLARSHIPS and an EXHI-

BITION in Natural Science, and a SCHOLARSHIP and EXHIBITION in Classics and Mathematics, will be awarded by Open Competition in the First Week of October next, at St. Mary's Hospital Medical School. For particulars apply to the Dean of the School,

A. B. SHEPHERD, M.B.

QUEENWOOD COLLEGE, near STOCKBRIDGE, HANTS.

Sound General Education for Boys.

Special attention to Science, particularly to Chemistry, both theoretical and practical

References to Dr. Debus, F.R.S.; Dr. Frankland, F.R.S.; Dr. Roscoe, F.R.S.; Dr. Angus Smith, F.R.S.; Dr. Tyndall, F.R.S.; Dr. Voelcker, F.R.S.; Dr. Williamson, F.R.S.

C. WILLMORE, Principal.

BIRKBECK LITERARY and SCIENTI-

FIC INSTITUTION, Southampton Buildings, Chancery Lane.—Evening Classes are held in the following Scientific Subjects:—Theoretical Mechanics, Chemistry, Experimental Physics, Mathematics, Geology, Mineralogy, Botany, Physiology, Biology, Microscopy, Physical Geography, Applied Mechanics, Steam, Practical Geometry, and Machine and Building Construction. Classes are also formed for Languages, Literature, History, Law, Logic, Political Economy, Drawing, Shorthand, &c. Library of 7,000 volumes. Quarterly Subscription, 6s. Prospectus gratis on application.

SUB-WEALDEN EXPLORATION

At Netherfield, near Battle.

The object of this work, commenced on the occasion of the meeting of the British Association at Brighton in 1872, is to ascertain the thickness of the Secondary Strata in the Wealden area, and the depth and nature of the underlying Palæozoic Formations.

The determination of the underground structure of the Wealden, is a point of great scientific interest, and one of *great national and economical importance*, as it may help to indicate the line taken underground by the coal-measures of Belgium and Somerset.

A sum of £3,000 has been collected by private subscription, and spent in this research, and a depth of 1,000 ft. reached, but as yet without any positive result. The beds traversed belong to the Lower Wealden, Purbeck and Portland series, Kimmeridge clay; and the boring has now reached the Oxford clay.

It is most desirable that the work should not be discontinued in the present stage for want of funds, and the Committee therefore make an earnest appeal for further assistance.

Subscriptions may be sent to Henry Willett, Esq., Hon. Sec. and Treasurer, Arnold House, Brighton.

Signed, on behalf of the Committee,

ANDREW RAMSAY,
JOHN EVANS,
JOSEPH PRESTWICH.

ROYAL COUNCIL OF EDUCATION.—The Laboratory and Class-rooms of Berners College are open for Pupils EVERY DAY and EVENING. The subjects of the above Examinations can be studied either Privately or in Classes. Fees moderate. Analyses and investigations conducted.—Apply to Prof. E. V. GARDNER, F.E.S., F.S.A., 44, Berners Street, W

MATHEMATICS and PHYSICS.—Mr. F. HUME TALBOT, M.A., late Junior Student of Christ Church, Oxford, First-Class in Mathematics and Natural Science, receives a few PUPILS, in a country home, and prepares them for the Army and Military Colleges, the Universities and the Scientific Professions For further particulars apply to Mr. F. H. Talbot, Speen, Newbury, Berks.

SCIENCE TUITION by CORRESPONDENCE.—Subjects: Botany, Elementary Chemistry, and Practical Use of the Microscope Pupils will have the use of a large Scientific Library, Apparatus, &c.—For Terms, address H., care of Macmillan & Co., 29, Bedford Street, Strand, London, W.C.

The REV. L. HENSLEY, Vicar of Hitchin, Herts, formerly Fellow and Assistant Tutor of Trinity College, Cambridge, receives several Pupils to prepare for the Universities.

To ASTRONOMERS and OTHERS.—A skilful Photographer, who is a Chemist and Amateur Astronomer, and possesses also some Literary Ability, wishes for an ENGAGEMENT in which these qualifications would be of service.—D.W., Doctor's Cottages, South Shore, Blackpool.

A GENTLEMAN who contemplates going to South Africa, sheep-farming, wishes to meet with a Companion with some knowledge of Natural Science and Veterinary Surgery, who would join him on mutual terms to be agreed upon.—Address "Farmer," care of the Publisher of NATURE, 29, Bedford Street, Strand, London, W.C.

A LARGE FARMER in one of the Southern Counties of England has a VACANCY for an Articled Pupil Could live with the family.—Apply by letter to Mr. William Rutherford, care of the Editor of NATURE, Bedford Street, Strand, W.C.

The HEAD-MASTER of a Grammar School, who is a Graduate of Cambridge, wishes to take two or three Pupils with him on a Continental Tour during the month of August.—For terms and further particulars apply to Head-Master, care of NATURE, 29, Bedford Street, Covent Garden, London.

BEES, Four Hives of, for Sale, in Glass-backed Observatory Hives, 20s. and 25s. each.—A.B., 17, Bellamy Street, Balham.

TO NATURALISTS and GEOLOGISTS.—The ORFORD CASTLE COLLECTION OF CRAG FOSSILS. (See Advertisement in NATURE of June 18th.) For particulars of these Collections address Fredc. Collingwood, Esq., F.G.S., 4, St. Martin's Place, Trafalgar Square, superscribed "ORFORD CASTLE FUND."

July 8th.

FOR SALE.

AN AMATEUR'S COLLECTION of FOSSILS (stratigraphically arranged) Precious Stones, Agates, Sea, Land, and Freshwater Shells. Suitable for a student of Primeval and Progressive Natural History. For particulars apply to X.Y.Z., care of the Publisher of NATURE, 29, Bedford Street, Strand, W.C.

TELESCOPE FOR SALE.—A Six-inch EQUATORIAL by Messrs. Cooke and Sons.—For full particulars, apply to Capt. E. Barnes, Bridlington-Quay.

NATURE.—Wanted clean Copies of Nos. 10, 13, and 116. NATURE Office, 29, Bedford Street, Strand, W.C.

TRUSSES (Self-adjusting), in use for the last sixty years, and same as worn by his late Majesty William IV. From 10s. each SALMON ODY & CO., by appointment to the Army and Navy, 292, Strand, London. Price List post free.

CHEST EXPANDER and TROUSERS BRACE combined, 8s., Ladies' Chest Expanders from 5s. 6d. SALMON ODY & CO., 292, Strand, London. Established 1806.

ELASTIC STOCKINGS for Varicose Veins or Weak Joints; and LADIES' ABDOMINAL BELTS, made to any size. Directions for self-measurement and prices post free. SALMON ODY & CO., 292, Strand, London.

NOTICE.—To Science Classes.—MOTTERSHEAD AND CO., LABORATORY FURNISHERS, EXCHANGE STREET, MANCHESTER, supply all the Apparatus enumerated in the SOUTH KENSINGTON LISTS FOR THE USE OF TEACHERS OF PHYSICAL SCIENCE (Light, Heat, Electricity, Magnetism, &c.), and will be happy to show intending purchasers specimens of the various Instruments, or to forward Estimates on application. Orders exceeding £2 in value delivered free to any railway station in England.

NORFOLK AND NORWICH NATURALISTS' SOCIETY.

The TRANSACTIONS for 1873–74, containing, with other original Papers, a List of the FISHES of Norfolk, with Introduction and Remarks by Dr. JNO. LOWE. Price 2s. to non-members.

Also a Supplement containing a List of the LEPIDOPTERA of Norfolk, with Remarks on the rarer Species, by CHAS G. BARRETT. Pp. 80. Price 2s. to non-members.

Sent post-free by the Assistant-Secretary, Mr Jno Quinton, jun., Literary Institution, St. Andrews, Norwich, on receipt of postage stamps.

CHEMICAL SOCIETY.

An INDEX to the JOURNAL of the CHEMICAL SOCIETY, 1841–1872, is now ready, including both Authors Names and Subjects. It may be obtained by Fellows at the Society's Rooms, price 5s., by post 5s. 4d.; and by Non-Fellows at the Publisher's, J. Van Voorst, 1, Paternoster Row, price 10s.

The JOURNAL of the CHEMICAL SOCIETY now contains Abstracts of all Papers on Chemistry, and its relations to Physiology and the Arts, published in British or Foreign Journals. It is issued monthly, and may be obtained by Non-Fellows of Mr Van Voorst by a subscription of £1 1s.

HOLLOWAY'S PILLS.—Palpitation of the heart is frequently not only felt but heard; prevents sleep, and begets the utmost dread of impending suffocation. These Pills are particularly recommended for removing this affection, because they strengthen the nervous and the debilitated, who are much more liable to this malady than other persons. Holloway's Pills so improve the digestion, increase the action of the liver, and give activity to the bowels, that giddiness, headache, and nausea depart as the palpitation diminishes, and the sufferer at once experiences the most indescribable relief from anxiety. Holloway's Pills form the best alterative and aperient in all cases of convalescence from fevers, inflammations, neuralgia, and all chronic diseases which have impoverished the blood and brain.

Full Instructions supplied. Of all Chemists and Stationers.

JUDSON'S DYES.—Dyeing at Home.— JUDSON'S simple DYES are most useful and effectual. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES Beautiful effects are thus produced in green, pink, brown, and many other colours—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES. — Ferns, Grasses, Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c, by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed.

JUDSON'S DYES.—Ink—Ink—Ink.—A Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water.

JUDSON'S DYES.—For Colouring Architectural Plans, &c —Much trouble may be saved in grinding up colours to a uniform tint. They may be used either with a brush or pen Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 10 other shades.

JUDSON'S DYES.—For Staining Wood.— Diluted with Water They sink deeply into the fibre, and will not rub off. They form the most economical stain on record. Light Brown for mahogany colour is excellent; No. 2 Black for walnut, Canary for satin, also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE

Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

NEW BOOKS.

This day, in 8vo, price 21s.

TELEGRAPH and TRAVEL. A Narrative of the Formation and Development of Telegraphic Communication between England and India, under the Orders of Her Majesty's Government, with Incidental Notices of the Countries traversed by the Lines. By Colonel Sir FREDERIC GOLDSMID, C.B. K.C.S.I., late Director of the Government Indo-European Telegraph. With numerous Illustrations and Maps.

DEDICATED BY SPECIAL PERMISSION TO THE QUEEN.

MENDELSSOHN. By Ferdinand Hiller. Letters and Recollections. Translated by M. E. VON GLEHN. With Lithographic Portrait from a Drawing by Carl Muller, never before published. Crown 8vo, 7s. 6d. [This day.

TECHNICAL TRAINING. By Thomas TWINING (one of the Vice-Presidents of the Society of Arts). Being a Suggestive Sketch of a National System of Industrial Instruction, founded on a general diffusion of Practical Science among the People. 8vo, 12s. [This day.

BIRDS: their Cages and their Keep. Being a Practical Manual of Bird-keeping and Bird-rearing. By K. A. BUIST. With Coloured Frontispiece and other Illustrations. Crown 8vo, 5s. [This day.

DISESTABLISHMENT AND DISENDOWMENT, WHAT ARE THEY? By EDWARD A. FREEMAN, D.C.L. Crown 8vo, 2s. 6d. [This day.

PRIMER of PHYSIOLOGY. By Dr. MICHAEL FOSTER, F.R.S. With numerous Illustrations, 18mo, cloth, 1s. (Macmillan's "Science Primers.") [This day.

The BIRDS of ARISTOPHANES. Translated into English Verse, with Introduction, Notes, and Appendices, by B. H. KENNEDY, D.D., Regius Professor of Greek in the University of Cambridge. Crown 8vo, 6s. [This day.

ESSAYS and ADDRESSES, by PROFESSORS and LECTURERS of Owens College, Manchester. Published in Commemoration of the Opening of the New College Buildings, October 7th, 1873. 8vo, 14s. [This day.

WORDSWORTH, SHELLEY, KEATS, and other ESSAYS. By Professor MASSON. Crown 8vo, 5s. [This day.

A GRAMMAR of the LATIN LANGUAGE. Part II. By H. J. ROBY, M.A., late Fellow of St. John's College, Cambridge. Crown 8vo. [Immediately.

MODERN UTILITARIANISM; or, the Systems of Paley, Bentham, and Mill examined and compared. By T. R. BIRKS, M.A., Professor of Moral Philosophy at Cambridge. Crown 8vo. [Just ready.

New Edition, corrected and improved, extra fcap. 8vo, 6s.

FIRST FORMS of VEGETATION. By the Rev. HUGH MACMILLAN, LL.D. F.R.S.E., Author of "Bible Teachings in Nature," &c. With Coloured Frontispiece and other Illustrations.

MACMILLAN & CO., LONDON.

SCIENTIFIC CLASS BOOKS.

POPULAR ASTRONOMY. By Sir G. B. AIRY, K.C.B., Astronomer Royal. Seventh Edition, 18mo, with Illustrations, 4s. 6d.

"Popular Astronomy in general has many manuals, but none of them supersede the Six Lectures of the Astronomer Royal under that title. Its speciality is the direct way in which every step is referred to the observatory, and in which the methods and instruments by which every observation is made are fully described. This gives a sense of solidity and substance to astronomical statements which is obtainable in no other way."—*Guardian.*

ELEMENTARY LESSONS in ASTRONOMY. By J. NORMAN LOCKYER, F.R.S. With Coloured Diagram of the Spectra of the Sun, Stars, and Nebulæ. New Edition, 18mo, with Illustrations, 5s. 6d.

"The book is full, clear, and sound."—*Athenæum.*

QUESTIONS on the SAME. 1s. 6d.

LESSONS in ELEMENTARY BOTANY. By Professor OLIVER, F.R.S. F.L.S. New Edition, 18mo, with Illustrations, price 4s. 6d.

"We know of no work so well suited to direct the botanical pupil's efforts as that of Professor Oliver."—*Natural History Review.*

LESSONS in ELEMENTARY CHEMISTRY. By Professor ROSCOE. New Edition, 18mo, with numerous Illustrations and Chromo-lithographs of the Solar Spectra, 4s. 6d.

"A small, compact, carefully elaborated, and well-arranged manual."—*Spectator.*

ELEMENTARY LESSONS in LOGIC, Deductive and Inductive. By Professor JEVONS. With copious Questions and Examples, and a Vocabulary of Logical Terms. New Edition, 18mo, 3s. 6d.

"Nothing can be better for a school-book."—*Guardian.*

LESSONS in ELEMENTARY PHYSIOLOGY. By Professor HUXLEY. New Edition, 18mo, with numerous Illustrations, price 4s. 6d.

QUESTIONS on the SAME. 1s. 6d.

POLITICAL ECONOMY for BEGINNERS. By MILLICENT GARRETT FAWCETT. With Questions. New Edition, 18mo, 2s. 6d.

"Clear, compact, and comprehensive."—*Daily News.*

LESSONS in ELEMENTARY PHYSICS. By BALFOUR STEWART, F.R.S., Professor of Natural Philosophy in Owens College, Manchester. New Edition, 18mo, with Coloured Diagram and numerous Illustrations, 4s. 6d.

LESSONS IN ELEMENTARY ANATOMY. By ST. GEORGE MIVART, F.R.S. &c., Lecturer on Comparative Anatomy at St. Mary's Hospital, Author of "The Genesis of Species." With upwards of 400 Illustrations.

These Lessons are intended for teachers and students of both sexes not already acquainted with anatomy. The author has endeavoured, by certain additions and by the mode of treatment, also to fit them for students in medicine, and generally for those acquainted with human anatomy, but desirous of learning its more significant relations to the structure of other animals.

"It may be questioned whether any other work on anatomy contains in like compass so proportionately great a mass of information."—*Lancet.*

"The work is excellent, and should be in the hands of every student of human anatomy."—*Medical Times.*

AN ELEMENTARY TREATISE ON STEAM. By JOHN PERRY, B.E., Whitworth Scholar, F.C.S., late Lecturer on Physics at Clifton College. 4s. 6d.

When boys have acquired an elementary knowledge of Experimental Mechanics and Heat it is well to teach them the application of the principles they have learnt, by some such course as is sketched in the present work, before proceeding to Electricity, Acoustics, and Light. The numerous examples and exercises will prove useful in all Physics classes; whether the whole course is followed or not; to candidates for scholarships at the Universities and to boys preparing for the examinations at Woolwich and Cooper's H

IN PREPARATION.

ELEMENTARY LESSONS in PHYSICAL GEOGRAPHY. By ARCHIBALD GEIKIE, F.R.S., Professor of Geology at Edinburgh. With numerous Illustrations.

ELEMENTARY LESSONS in GEOLOGY. By Professor GEIKIE.

MACMILLAN & CO., LONDON.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS

is allowed by upwards of 500 Medical Men to be the most effective invention in the curative treatment of Hernia. The use of a steel spring, so often hurtful in its effects, is here avoided; a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, 2 inches below the hips, being sent to the manufacturer,

JOHN WHITE, 228, Piccadilly.

Price of a Single Truss, 16s., 21s, 26s. 6d., and 31s. 6d.
,, Double ,, 31s. 6d, 42s., and 52s. 6d.
,, Umbilical ,, 42s and 52s. 6d.
Post-free.

ELASTIC STOCKINGS, KNEE-CAPS,

&c., for Varicose Veins and all cases of weakness and Swellings of the Legs, Sprains, &c. They are porous, light in texture, and inexpensive, and drawn on over an ordinary stocking. Price 4s. 6d., 7s. 6d., 10s., and 16s. each. Postage free.

JOHN WHITE, Manufacturer, 228, Piccadilly, London.

Edited by HENRY TRIMEN, M B, F.L.S., British Museum, assisted by J G BAKER, F.L.S., Royal Herbarium, Kew.

Subscriptions for 1874 (12s post free in the United Kingdom) payable advance to the publishers, Messrs. Ranken and Co., Drury House, St. Mary-le-Strand, London, W C., of whom may be obtained the volume for 1873 (price 16s 6d. bound in cloth) · also covers for the volume (price 1s.), and back numbers

NEWMAN'S ENTOMOLOGIST:

A MONTHLY ILLUSTRATED JOURNAL OF BRITISH INSECTS

Conducted by EDWARD NEWMAN, F.L.S. F Z.S. &c.,

Late President of the Entomological Society.

The objects of the *Entomologist* are to give every information about Insects; more especially to work out the history of those which attack Fruit and Forest Trees, Vegetables, Root and Seed Crops, Greenhouse and Garden Plants, with a view to suggesting remedies. Notes, Observations, and Queries on every branch of the Science are solicited. To preserve a continuous record of the occurrence of rarities. To improve collections by offering a ready medium for the exchange of specimens.

Published on the First of every Month.

PRICE SIXPENCE.

SIMPKIN, MARSHALL, and Co, Stationers' Hall Court.

This day, in 8vo, price 14s., with Woodcuts.

ETRUSCAN RESEARCHES. By Isaac TAYLOR, M A. With Glossary and Index.

CONTENTS:—The Prologue—Tyrrhenians and Turanians—Ethnographical Notes on the Etruscan People—The Etruscan Mythology—The Etruscan Numerals—Epitaphs—Words denoting Kinship—The Bilingual Inscriptions—Forms of Dedication—The Ancient Vocabularies—Names—The Epilogue.

London: MACMILLAN & CO.

CLARENDON PRESS PUBLICATIONS.

A TREATISE ON ELECTRICITY AND MAGNETISM. By J CLERK MAXWELL, M.A. F.R.S., Professor of Experimental Physics in the University of Cambridge. 2 vols. 8vo, £1 11s 6d.

The GEOLOGY of the VALLEY of the THAMES. By JOHN PHILLIPS, M.A. F R S., Professor of Geology in the University of Oxford. With Coloured Map and numerous Illustrations. 8vo, 21s.

"It does not often fall to our lot to open a book devoted to Science, and to derive from it the large amount of pleasure, and at the same time of real instruction, which we have found in the pages of this volume."—*Athenæum*

VESUVIUS. By John Phillips, M.A., F.R.S. With numerous Maps and Illustrations. Crown 8vo, 10s. 6d.

"Professor Phillips has undertaken to give an authentic history of Vesuvius from the days of Crassus to the end of 1868, and to explain the phenomena of the burning mountain according to the laws of a rigid induction His plan has been successfully carried out, and has resulted in a work of high value"—*Pall Mall Gazette.*

DESCRIPTIVE ASTRONOMY. A Handbook for the General Reader, and also for practical Observatory work. With 224 Illustrations and numerous Tables By G F. CHAMBERS, F.R.A.S, Barrister-at-Law. Demy 8vo, cloth, 856 pp, price 21s.

CHEMISTRY FOR STUDENTS. By A. W. WILLIAMSON, Phil. Doc. F.R.S., Professor of Chemistry, University College, London. New Edition, with Solutions. Extra fcap. 8vo, cloth, price 8s. 6d.

EXERCISES IN PRACTICAL CHEMISTRY. By A G VERNON HARCOURT, M.A. F.R.S., Senior Student of Christ Church, and Lee's Reader in Chemistry; and H. G. MADAN, M A., Fellow of Queen's College, Oxford. Series I., Qualitative Exercises. Second Edition. Crown 8vo, price 7s 6d.

AN ELEMENTARY TREATISE ON HEAT. By BALFOUR STEWART, LL.D F R.S., Professor of Natural History in Owens College, Manchester. Ext. fcap 8vo, with numerous Woodcuts and Diagrams, 7s. 6d. New Edition, revised and enlarged.

"The publication of this manual is exceedingly well-timed; it includes within narrow limits the leading facts and principles of this younger-born of the Sciences, and for the mastery of the greater portion of the contents only requires ordinary intelligence on the part of the reader."—*Spectator.*

FORMS OF ANIMAL LIFE. Being Outlines of Zoological Classification based upon Anatomical Investigation, and illustrated by Descriptions and Specimens and of Figures. By G. ROLLESTON, M.D. F.R S., Linacre Professor of Physiology, Oxford. Demy 8vo, price 16s.

A TREATISE on ACOUSTICS. By W. J DONKIN, F R S, Savilian Professor of Astronomy in the University of Oxford Crown 8vo, price 7s 6d

A SYSTEM OF PHYSICAL EDUCATION: Theoretical and Practical With 346 Illustrations drawn by A. MACDONALD, of the Oxford School of Art. By ARCHIBALD MACLAREN, The Gymnasium, Oxford. Ext. fcap. 8vo, price 7s. 6d.

"The work before us is one which should be in the hands of every schoolmaster and schoolmistress. It is marked in every line by good sense, and is so clearly written that no one can mistake its rules"—*Lancet.*

ELEMENTS OF NATURAL PHILOSOPHY. By Sir W. THOMSON, LL D. D.C.L. F.R.S., Professor of Natural Philosophy, Glasgow. and P. G. TAIT, M.A, Professor of Natural Philosophy, Edinburgh. Part I, 8vo, 9s.

Oxford: Printed at the Clarendon Press, and Published by MACMILLAN & CO., London, Publishers to the University.

VICHY WATERS COMPANY,

27, MARGARET STREET, REGENT STREET, LONDON, W.

DEPOT FOR ALL FOREIGN MINERAL WATERS, VICHY.

The use of the Natural Waters of Vichy is extending vastly. They are most efficacious in all complaints arising from acidity. They make the blood more alkaline and less coagulable, and promote its circulation. In the derangement of the digestive functions, and in all the chronical disorders of the abdominal organs, their good effects are shown. The Waters of Vichy are alkaline and gaseous, and although medicinal they are agreeable to the palate, from their slightly acid taste. Of all mineral waters they are the most exported.

NOTICE OF REMOVAL.

L. OERTLING,

OF 27, MOORGATE STREET,

The Winter Season will commence on the 1st October The new Medical School Buildings will be opened on the 2nd October by Professor T H Huxley, F R.S. A composition fee of £50, payable in two instalments, with an annual tutorial fee of £2 2s, admits to the complete course of study at the School, and a further sum of £42 to the Hospital Practice at the Royal Infirmary.

Prospectuses will be forwarded on application.

J HOLME NICHOLSON, Registrar.

OWENS COLLEGE, MANCHESTER.

The next SESSION will commence on the 6th of OCTOBER.

Prospectuses of the several Departments of the Day Classes, Evening Classes, and Medical School, and also of Scholarships and Entrance Exhibitions, will be forwarded on application.

J HOLME NICHOLSON, Registrar.

A LARGE FARMER in one of the Southern Counties of England has a VACANCY for an Articled Pupil Could live with the family.—Apply by letter to Mr William Rutherford, care of the Editor of NATURE, Bedford Street, Strand, W.C.

TWO SCHOLARSHIPS and an EXHIBITION in Natural Science, and a SCHOLARSHIP and EXHIBITION in Classics and Mathematics, will be awarded by Open Competition in the First Week of October next, at St Mary's Hospital Medical School. For particulars apply to the Dean of the School,

A. B. SHEPHERD, M B.

MIDDLESEX HOSPITAL.

ENTRANCE SCHOLARSHIPS.

Two Scholarships, of the annual value of £25 and £20 respectively, will be competed for on September 28th and following days These Scholarships are open to all gentlemen who commence their medical studies in October 1874 Successful candidates will be required to become general students of the College.

For full particulars as to subjects of examination, &c, apply to the Dean.

ROBERT KING, B A. M B, Dean

ST. BARTHOLOMEW'S HOSPITAL AND COLLEGE.

SCHOLARSHIPS IN SCIENCE

Two Scholarships in Science have been founded at St Bartholomew's Hospital :—

1. An Open Scholarship of the value of £100, tenable for one year, to be competed for in September. The subjects of examination are Physics, Chemistry, Botany, and Zoology The successful candidate will be required to enter at St. Bartholomew's Hospital in October next.

2 Preliminary Scientific Scholarship of the value of £50, tenable for one year, to be competed for in October next by Students of the Hospital of less than six months' standing. The subjects of examination are identical with those of the Open Scholarship.

For further particulars and syllabus of subjects, application may be made personally or by letter to the Warden of the College, St Bartholomew's Hospital.

ST. BARTHOLOMEW'S HOSPITAL AND COLLEGE.

The WINTER SESSION will begin on THURSDAY, October 1

The Clinical Practice of the Hospital comprises a service of 710 Beds, inclusive of 34 Beds for Convalescents at Highgate

Students can reside within the Hospital walls, subject to the College regulations.

For all particulars concerning either the Hospital or College, application may be made, personally or by letter, to the Resident Warden of the College

A Handbook will be forwarded on application.

The HEAD-MASTER of a Grammar School, who is a Graduate of Cambridge, wishes to take two or three Pupils with him on a Continental Tour during the month of August.—For terms and further particulars apply to Head-Master, care of NATURE, 29, Bedford Street, Covent Garden, London.

ROYAL MEDICAL COLLEGE AT EPSOM.

A TEACHER of BIOLOGY is required to attend twice a week in term time. He must be able to prepare a Class for the First B Sc. of London. Stipend, £80 a year.

Apply to the Rev. Dr. West, Head-Master, at the Vicarage, Ryde, Isle of Wight

---

QUEENWOOD COLLEGE, near STOCKBRIDGE, HANTS.

Sound General Education or Boys.

Special attention to Science, particularly to Chemistry, both theoretical and practical

References to Dr. Debus. F.R.S.; Dr. Frankland, F.R.S.; Dr. Roscoe, F.R.S.; Dr. Angus Smith, F.R.S.; Dr. Tyndall, F.R.S.; Dr. Voelcker, F.R.S.; Dr. Williamson, F.R.S.

C. WILLMORE, Principal.

ROYAL COUNCIL OF EDUCATION.—The Laboratory and Class-rooms of Berners College are open for Pupils EVERY DAY and EVENING. The subjects of the above Examinations can be studied either Privately or in Classes. Fees moderate. Analyses and investigations conducted.—Apply to Prof. E. V. GARDNER, F.E.S., F.S.A., 44, Berners Street, W.

MATHEMATICS and PHYSICS.—Mr. F. HUME TALBOT, M.A., late Junior Student of Christ Church, Oxford, First-Class in Mathematics and Natural Science, receives a few PUPILS, in a country home, and prepares them for the Army and Military Colleges, the Universities and the Scientific Professions. For further particulars apply to Mr. F. H. Talbot, Speen, Newbury, Berks.

SCIENCE TUITION by CORRESPONDENCE.—Subjects: Botany, Elementary Chemistry, and Practical Use of the Microscope. Pupils will have the use of a large Scientific Library, Apparatus, &c.—For Terms, address H., care of Macmillan & Co., 29, Bedford Street, Strand, London, W.C.

The REV. L. HENSLEY, Vicar of Hitchin, Herts, formerly Fellow and Assistant Tutor of Trinity College, Cambridge, receives several Pupils to prepare for the Universities.

To ASTRONOMERS and OTHERS.—A skilful Photographer, who is a Chemist and Amateur Astronomer, and possesses also some Literary Ability, wishes for an ENGAGEMENT in which these qualifications would be of service.—D.W., Doctor's Cottages, South Shore, Blackpool.

SUB-WEALDEN EXPLORATION

At Netherfield, near Battle.

The object of this work, commenced on the occasion of the meeting of the British Association at Brighton in 1872, is to ascertain the thickness of the Secondary Strata in the Wealden area, and the depth and nature of the underlying Palæozoic Formations.

The determination of the underground structure of the Wealden, is a point of great scientific interest, and one of *great national and economical importance*, as it may help to indicate the line taken underground by the coal-measures of Belgium and Somerset.

A sum of £3,000 has been collected by private subscription, and spent in this research, and a depth of 1,000 ft reached, but as yet without any positive result. The beds traversed belong to the Lower Wealden, Purbeck and Portland series, Kimmeridge clay, and the boring has now reached the Oxford clay.

It is most desirable that the work should not be discontinued in the present stage for want of funds, and the Committee therefore make an earnest appeal for further assistance.

Subscriptions may be sent to Henry Willett, Esq., Hon. Sec. and Treasurer, Arnold House, Brighton.

Signed, on behalf of the Committee,

ANDREW RAMSAY,
JOHN EVANS,
JOSEPH PRESTWICH.

A GENTLEMAN who contemplates going to South Africa, sheep-farming, wishes to meet with a Companion with some knowledge of Natural Science and Veterinary Surgery, who would join him on mutual terms to be agreed upon.—Address "Farmer," care of the Publisher of NATURE, 29, Bedford Street, Strand, London, W.C.

BEES, Four Hives of, for Sale, in Glass-backed Observatory Hives, 20s. and 25s. each.—A.B., 17, Bellamy Street, Balham.

TO NATURALISTS and GEOLOGISTS.—The ORFORD CASTLE COLLECTION OF CRAG FOSSILS. (See Advertisement in NATURE of June 18th.) For particulars of these Collections address Fredc. Collingwood, Esq., F.G.S., 4, St. Martin's Place, Trafalgar Square, superscribed "ORFORD CASTLE FUND."

July 8th.

CRAG FOSSILS from the Coralline and Red Crags. 50 species, 15s., 100 species, 30s.; 200 species, 70s. Complete Lists of Crag Fossils, 9d. MINERALS and ROCKS: 150 examples, £2 2s.; 250 ditto, £4; or with half fossils, £3 10s. 6d.—A. BELL, 5, Grafton Street, Fitzroy Square, London, W.

THOMAS D. RUSSELL,
GEOLOGIST & MICROSCOPIST,
48, ESSEX STREET, STRAND, W.C.

(Late of Arundel Street.)

British Rocks—100 Specimens ... ... One Guinea.
British Fossils—100 „ ... ... One Guinea.

Collections and Specimens of
British Fossils from the Crag to the Silurian inclusive.

Detailed Catalogues post-free.

NATURE.—Wanted clean Copies of Nos. 10, 13, and 116. NATURE Office, 29, Bedford Street, Strand, W.C.

The SECOND MASTER of a High-class Grammar School receives a few Resident Pupils. Special attention is given to the study of Natural Sciences.—For further particulars apply by letter to "Tripos," care of the Publisher of NATURE, 29, Bedford Street, Strand, London, W.C.

A LADY requires a RE-APPOINTMENT. German, French, the Elements of Natural Science, together with all the usual branches of Education. Highest References can be given.—Address, M.A.H., care of the Publishers of NATURE, 29, Bedford Street, Covent Garden, W.C.

WANTED.—SKELETONS of a few of the SMALLER BRITISH BIRDS, to complete a Collection.—Address particulars to F.Z.S., care of Editor of NATURE, Bedford Street, Strand, W.C.

NOTICE.—To Science Classes.—MOT-TERSHEAD AND CO., LABORATORY FURNISHERS, EXCHANGE STREET, MANCHESTER, supply all the Apparatus enumerated in the SOUTH KENSINGTON LISTS FOR THE USE OF TEACHERS OF PHYSICAL SCIENCE (Light, Heat, Electricity, Magnetism, &c.), and will be happy to show intending purchasers specimens of the various Instruments, or to forward Estimates on application. Orders exceeding £2 in value delivered free to any railway station in England.

CHEMICAL SOCIETY.

An INDEX to the JOURNAL of the CHE-MICAL SOCIETY, 1841–1872, is now ready, including both Authors Names and Subjects. It may be obtained by Fellows at the Society's Rooms, price 5s., by post 5s. 4d.; and by Non-Fellows at the Publisher's, J. Van Voorst, 1, Paternoster Row, price 10s.

The JOURNAL of the CHEMICAL SO-CIETY now contains Abstracts of all Papers on Chemistry, and its relations to Physiology and the Arts, published in British or Foreign Journals. It is issued monthly, and may be obtained by Non-Fellows of Mr. Van Voorst by a subscription of £1 1s.

The JOURNAL of the ANTHROPOLOGICAL INSTITUTE of GREAT BRITAIN and IRELAND, No 9, January 1874, Illustrated, price 6s. contains :—Papers on Anthropological Statistics from Schools, Ancient Burial Ground of Peru ; Anthropology at Bradford ; the Siah Posh Kafirs, Hieroglyphics of Easter Island ; Exploration of Caves Ha and Pontnewydd , a Human Fibula from Victoria Cave ; Translation of the Han Annals ; Westerly Drifting of the Huns , the Nagas ; Monuments of the Khasi Hills , Description of a Samoiede Skull ; Skulls from the Peat of Ely.—The Annual General Meeting and Presidential Address of Prof. Busk, with Discussion and Anthropological Miscellanea.

TRÜBNER & CO., Ludgate Hill, London.

THE ONLY CHEAP FARMERS' NEWSPAPER.

THE CHAMBER OF AGRICULTURE JOURNAL

AND FARMERS' CHRONICLE,

Edited by JOHN ALGERNON CLARKE, Secretary to the Central Chamber of Agriculture,

Devotes special attention to the discussions and proceedings of the Chambers of Agriculture of Great Britain (which now number upwards of 18,000 members), besides giving original papers on practical farming, and a mass of intelligence of particular value to the agriculturist.

The London Corn, Seed, Hop, Cattle, and other Markets of Monday are specially reported in this Journal, which is despatched the same evening so as to insure delivery to country subscribers by the first post on Tuesday morning. Price 3d., or prepaid, 15s. a year post free.

Published by W. PICKERING, 21, Arundel Street, Strand, W.C.

THE BREWERS' GUARDIAN :

A Fortnightly Paper devoted to the Protection of Brewers' Interests, Licensing, Legal, and Parliamentary Matters.

REVIEW OF THE MALT AND HOP TRADES ; AND WINE AND SPIRIT TRADES RECORD.

The Official Organ of the Country Brewers' Society.
(Founded 1822.)

"The Brewers' Guardian" is published on the Evenings of every alternat Tuesday, and is the only journal officially connected with brewing interests Subscription, 16s. 6d. per annum, post free, dating from any quarter-day Single Copies, 1s. each. Registered for transmission abroad.

Offices—5, Bond Court, Walbrook, London, E.C.

"THE GARDEN,"

A Weekly Illustrated Journal devoted solely to Horticulture in all its Branches.

"THE GARDEN" is conducted by WILLIAM ROBINSON, F.L.S , Author of "Hardy Flowers," "Alpine Flowers for English Gardens," "The Parks, Promenades, and Gardens of Paris," &c , and the best Writers in every Department of Gardening are contributors to its pages.

The following are some of the subjects regularly treated of in its pages —

The Flower Garden.
Landscape Gardening.

THE LINGUIST,

AND

EDUCATIONAL REVIEW :

A PLEASANT MONTHLY PERIODICAL (commencing 1st July, 1874), on the Languages, Antiquities, Scenery, Races, Creeds, and Legends of all Countries ; containing also copious Reviews of New Publications—British and Foreign—Translations in Prose and Verse, and *thoroughly practical* Lessons in European and Oriental Languages. Twenty-four quarto pages. Price Sixpence. Obtainable through all Booksellers and Newsvendors in the United Kingdom, or direct from the Publishers, post-free, Sevenpence.

London : Thomas Cook and Son, Excursionists, Ludgate Circus, E.C., and 105, 106, and 107, Fleet Street, E.C. ; Hodder and Stoughton, 27 and 31, Paternoster Row, E.C.

THE ZOOLOGIST :

A MONTHLY JOURNAL OF NATURAL HISTORY,

Conducted by EDWARD NEWMAN, F.L.S. F.Z.S. &c.

The Zoologist was established in 1843 to record and preserve observations on subjects similar to those treated of in White's "Natural History of Selborne," and the success which has attended it is sufficient proof that its plan is acceptable to "out-of-door naturalists ;" those who delight in observing the manners, habits, the private lives, the migrations, movements, nests, young and food of animals. It contains original papers and records of facts relating to Quadrupeds, Birds, Reptiles, Fishes, and Insects, together with notices of recent works on every branch of Natural History. The editor has been assisted by more than two hundred of our very best zoologists.

Published on the First of every Month.

PRICE ONE SHILLING.

London : JOHN VAN VOORST, 1, Paternoster Row.

THE ENTOMOLOGIST'S MONTHLY MAGAZINE,

Price Sixpence, monthly, 24 pages 8vo., with occasional Illustrations, Conducted by J. W. DOUGLAS, R. MCLACHLAN, F.L.S., E. C. RYE, and H. T. STAINTON, F.R.S., &c.

This Magazine, commenced in 1864, contains standard articles and notes on all subjects connected with Entomology, and especially on the Insects of the British Isles.

Subscription—Six Shillings per Volume, post-free. The volumes commence with the June number in each year.

Vols. I to V. (strongly bound in cloth) may be obtained by purchasers of the entire set to date, at the increased price of 10s. each ; the succeeding vols. may be had separately or together at 7s. each.

London : JOHN VAN VOORST, 1, Paternoster Row.

N.B.—Communications, &c., should be sent to the Editors at the above address.

NEWMAN'S ENTOMOLOGIST :

A MONTHLY ILLUSTRATED JOURNAL OF BRITISH INSECTS

Conducted by EDWARD NEWMAN, F.L.S. F.Z.S. &c.,

Late President of the Entomological Society.

The objects of the *Entomologist* are to give every information about Insects ; more especially to work out the history of those which attack Fruit and Forest Trees, Vegetables, Root and Seed Crops, Greenhouse and Garden Plants, with a view to suggesting remedies. Notes, Observations, and Queries on every branch of the Science are solicited. To preserve a continuous record of the occurrence of rarities. To improve collections by offering a ready medium for the exchange of specimens.

Published on the First of every Month.

PRICE SIXPENCE.

SIMPKIN, MARSHALL, and Co , Stationers' Hall Court.

On the 1st of every Month, pp. 32, 8vo, with at least One Plate,

THE JOURNAL OF BOTANY,

BRITISH AND FOREIGN,

Edited by HENRY TRIMEN, M.B, F.L.S., British Museum, assisted by J. G. BAKER, F.L.S., Royal Herbarium, Kew.

Subscriptions for 1874 (12s. post free in the United Kingdom) payable in advance to the publishers, Messrs. Ranken and Co., Drury House, St. Mary-le-Strand, London, W.C., of whom may be obtained the volume for 1873 (price 16s. 6d. bound in cloth) · also covers for the volume (price 1s), and back numbers.

MEDAL FOR PROGRESS,
Awarded to J. S. FRY & SONS.

CARACAS

Owes its delicious flavour to the choice Caracas and other Cocoas with which it is manufactured.

COCOA

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS

is allowed by upwards of 500 Medical Men to be the most effective invention in the curative treatment of Hernia. The use of a steel spring, so often hurtful in its effects, is here avoided; a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, 2 inches below the hips, being sent to the manufacturer,

JOHN WHITE, 228, Piccadilly.

Price of a Single Truss, 16*s.*, 21*s.*, 26*s.* 6*d.*, and 31*s.* 6*d.*
" Double " 31*s.* 6*d.*, 42*s.*, and 52*s.* 6*d.*
" Umbilical " 42*s.* and 52*s.* 6*d.*
Post-free.

ELASTIC STOCKINGS, KNEE-CAPS,

&c., for Varicose Veins and all cases of weakness and Swellings of the Legs, Sprains &c. They are porous, light in texture, and inexpensive, and drawn on over an ordinary stocking. Price 4*s.* 6*d.*, 7*s.* 6*d.*, 10*s.*, and 16*s.* each. Postage free.

JOHN WHITE, Manufacturer, 228, Piccadilly, London.

NOW READY.

PRICE 1*s.*

ART

PICTORIAL AND INDUSTRIAL: A REVIEW.

FOR AUGUST 1874.

WITH CHOICE EXAMPLES FROM VARIOUS SOURCES,

REPRODUCED BY THE HELIOTYPE AND OTHER PERMANENT PROCESSES.

Edited by JOHN FORBES-ROBERTSON.

"ARS ARTIS CAUSÂ, ITAQUE HOMINIS."

CONTENTS OF AUGUST NUMBER—Our Illustrations:—1. "Henry Fawcett, Esq., M.P., and Mrs. Fawcett,' by Ford Madox-Brown. 2. "The Knight in Armour," by Wm. Cave Thomas. 3. "Lesson in Network," by J. F. Millet.—The Exhibitions: The Royal Academy, the Munich Gallery.—The Decoration of St. Paul's Cathedral, No. 2.—Art Notes and Gossip.—Reviews.

SPECIAL NOTICE.—The Publishers take the present opportunity of informing the Readers of "Art" that fresh arrangements have been entered into for the reproduction in the forthcoming Numbers of choice examples of Painting, Engraving, Sculpture, Pottery, and Art objects generally. These will be representative both of British and Continental Schools.

N.B.—Artists and those connected with Artistic manufacture wishing their works to be reproduced in the pages of "Art," are requested to communicate with the Editor, through the Publishers.

London: SAMPSON LOW, MARSTON, LOW, & SEARLE, 188, Fleet Street, E.C.

JUDSON'S DYES.—18 Colours, 6d. each.

RIBBONS, WOOL, SILK, FEATHERS,

Completely dyed in 10 minutes without soiling the hands.

Full Instructions supplied. Of all Chemists and Stationers.

JUDSON'S DYES.—Dyeing at Home.—JUDSON'S simple DYES are most useful and effective. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES. Beautiful effects are thus produced in green, pink, brown, and many other colours.—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES.—Ferns, Grasses, Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c., by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed.

JUDSON'S DYES.—Ink—Ink—Ink.—A Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water.

JUDSON'S DYES.—For Colouring Architectural Plans, &c.—Much trouble may be saved in grinding up colours to a uniform tint. They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades.

JUDSON'S DYES.—For Staining Wood.—Diluted with Water. They sink deeply into the fibre, and will not rub off. They form the most economical stain on record. Light Brown for mahogany colour is excellent; No. 2 Black for walnut; Canary for satin; also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE,

Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

This day, in 8vo, price 14s., with Woodcuts.

ETRUSCAN RESEARCHES. By Isaac TAYLOR, M.A. With Glossary and Index.

HOLLOWAY'S PILLS.—Excellent Pills.—The resources of medicine and chemistry were long and fruitlessly tried before they yielded a remedy which could overcome disorders of the stomach and nerves till Professor Holloway discovered his purifying and tonic Pills. They are the safest and surest correctives of indigestion, heartburn, flatulency, torpidity of the liver, twitchings, nervous fancies, despondency, low spirits, and declining strength. Holloway's Pills supersede all irregular action in the body, and so strengthen and support the system that disease departs and leaves the patient not at all shaken. This is the grand aim and object of medical art, to regulate disordered functions without damaging the constitution by the remedy and admirably is this end attained by Holloway's Pills.

NEW BOOKS.

This day, in 8vo, price 21s.

SCIENTIFIC CLASS BOOKS.

POPULAR ASTRONOMY. By Sir G. B. AIRY, K C B., Astronomer Royal. Seventh Edition, 18mo, with Illustrations, 4s 6d.

"Popular Astronomy in general has many manuals, but none of them supersede the Six Lectures of the Astronomer Royal under that title. Its speciality is the direct way in which every step is referred to the observatory, and in which the methods and instruments by which every observation is made are fully described. This gives a sense of solidity and substance to astronomical statements which is obtainable in no other way."—*Guardian.*

ELEMENTARY LESSONS in ASTRONOMY. By J. NORMAN LOCKYER, F R.S. With Coloured Diagram of the Spectra of the Sun, Stars, and Nebulæ. New Edition, 18mo, with Illustrations, 5s. 6d.

"The book is full, clear, and sound."—*Athenæum.*

QUESTIONS on the SAME. 1s. 6d.

LESSONS in ELEMENTARY BOTANY. By Professor OLIVER, F.R S. F L S New Edition, 18mo, with Illustrations, price 4s. 6d

"We know of no work so well suited to direct the botanical pupil's efforts as that of Professor Oliver."—*Natural History Review.*

LESSONS in ELEMENTARY PHYSIOLOGY. By Professor HUXLEY New Edition, 18mo, with numerous Illustrations, price 4s 6d

QUESTIONS on the SAME. 1s. 6d.

POLITICAL ECONOMY for BEGINNERS. By MILLICENT GARRETT FAWCETT. With Questions. New Edition, 18mo, 2s. 6d.

"Clear, compact, and comprehensive"—*Daily News.*

LESSONS in ELEMENTARY PHYSICS. By BALFOUR STEWART, F.R S, Professor of Natural Philosophy in Owens College, Manchester. New Edition, 18mo, with Coloured Diagram and numerous Illustrations, 4s. 6d.

LESSONS IN ELEMENTARY ANATOMY. By ST. GEORGE MIVART, F.R.S. &c., Lecturer on Comparative Anatomy at St. Mary's Hospital, Author of "The Genesis of Species." With upwards of 400 Illustrations.

These Lessons are intended for teachers and students of both sexes not already acquainted with anatomy. The author has endeavoured, by certain additions and by the mode of treatment, also to fit them for students in medicine, and generally for those acquainted with human anatomy, but desirous of learning its more significant relations to the structure of other animals.

"It may be questioned whether any other work on anatomy contains in like compass so proportionately great a mass of information."—*Lancet.*

"The work is excellent, and should be in the hands of every student of human anatomy."—*Medical Times.*

AN ELEMENTARY TREATISE ON STEAM. By JOHN PERRY, B E, Whitworth Scholar, F.C.S., late Lecturer on Physics at Clifton College. 4s. 6d.

When boys have acquired an elementary knowledge of Experimental Mechanics and Heat it is well to teach them the application of the principles they have learnt, by some such course as is sketched in the present work, before proceeding to Electricity, Acoustics, and Light. The numerous examples and exercises will prove useful in all Physics classes; whether the whole course is followed or not; to candidates for scholarships at the Universities and to boys preparing for the examinations at Woolwich and Cooper's Hill.

IN PREPARATION.

ELEMENTARY LESSONS in PHYSICAL GEOGRAPHY. By ARCHIBALD GEIKIE, F.R S, Professor of Geology at Edinburgh. With numerous Illustrations.

VICHY WATERS COMPANY,
27, MARGARET STREET, REGENT STREET, LONDON, W.
DEPOT FOR ALL FOREIGN MINERAL WATERS, VICHY.

The use of the Natural Waters of Vichy is extending vastly. They are most efficacious in all complaints arising from acidity. They make the blood more alkaline and less coagulable, and promote its circulation. In the derangement of the digestive functions, and in all the chronical disorders of the abdominal organs, their good effects are shown. The Waters of Vichy are alkaline and gaseous, and although medicinal they are agreeable to the palate, from their slightly acid taste. Of all mineral waters they are the most exported.

THE LONDON & GENERAL WATER PURIFYING COMPANY, LIMITED

FLETCHER'S
NEW LOW TEMPERATURE BURNER (PATENT)

This Burner gives a range of heating power from a gentle current of WARM air to a BRIGHT RED HEAT, and is so perfectly under control that a common glass bottle may be placed on the tripod without protection and heated to any required temperature without the slightest risk of fracture. In practical use it dispenses with the necessity for drying-closets, sand-and-water baths, &c.

For very low temperatures the ring must be lighted through the opening B, this causes a current of warm air to rise through the gauze above. For higher temperatures the light must be applied on the surface of the gauze A, which will give a large body of clear blue flame. A special pattern is made with a blast tube, by which the flame on the surface can be concentrated and urged until it gives almost a clear white heat, the temperature depending on the air supplied through the blast tube.

Price, without blast tube ... ... 7s. 6d.
" with blast tube for high temperatures ... 9s. 0d.

UNIVERSAL FURNACE (GAS),

For High Temperatures (without blast) for Crucibles, Muffles, &c., in several sizes and patterns. Special designs made to order.

NEW BUNSEN BURNERS, giving a range of temperature up to a clear white heat, 10s. 6d.

HOT BLAST BLOWPIPES, giving temperatures exceeding the fusing-point of platinum, 11s 6d, 13s., 15s.

POWERFUL FOOT-BLOWERS, 18s.

NOTICE.

BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

"NATURE"

FOR AUGUST 20

And the following Numbers will contain FULL REPORTS of

THE PRESIDENT'S ADDRESS,

And of the ADDRESSES and PROCEEDINGS in the different Sections.

With the Number for AUGUST 20 will be given a

PORTRAIT,

ENGRAVED ON STEEL BY CH. H. JEENS, OF

PROFESSOR TYNDALL,

With a NOTICE by PROFESSOR HELMHOLZ, forming the FOURTH of the SERIES of Illustrated Articles on

"SCIENTIFIC WORTHIES."

NOTICE TO ADVERTISERS.

Advertisements intended for the above Number should be sent to the Publishers as soon as possible.

Office: 29, BEDFORD STREET, STRAND, W.C.

PHILOSOPHICAL TRANSACTIONS.

The FELLOWS of the ROYAL SOCIETY are hereby informed that the First Part of the "Philosophical Transactions," Vol 164, for the year 1874, is now published, and ready for delivery on application at the Office of the Society in Burlington House, daily, between the hours of 10 and 4

WALTER WHITE,
Burlington House. *Assistant Secretary R S.*

BRITISH ASSOCIATION for the ADVANCEMENT OF SCIENCE,

22, Albemarle Street, London, W.

BELFAST, August 19-26.

President-Elect,

Professor TYNDALL, D C.L. F R.S.

The Journal, President's Address, and other Printed Papers issued by the Association during the Annual Meeting, will be forwarded daily to Members and others who will forward 2s 6d to Mr Stewardson, Clerk of the Association, Reception Room, Belfast, on or before August 19

G GRIFFITH, M.A., Assistant General Secretary.

OWENS COLLEGE, MANCHESTER.

The next SESSION will commence on the 6th of OCTOBER.

Prospectuses of the several Departments of the Day Classes, Evening Classes, and Medical School, and also of Scholarships and Entrance Exhibitions, will be forwarded on application

J. HOLME NICHOLSON, Registrar.

WESTMINSTER HOSPITAL MEDICAL SCHOOL.

(OPPOSITE WESTMINSTER ABBEY)

The SESSION 1874-75 will commence on THURSDAY, October 1st, with an INTRODUCTORY LECTURE by Dr Potter The Address will be followed by the Distribution of the Prizes and a Conversazione in the Board Room

The new Physiological Laboratory will be completed by October 1st

The Examinations for the Entrance Scholarships will be held on the 2nd and 3rd of October.

GEORGE COWELL, Dean

THE MIDDLESEX HOSPITAL COLLEGE.

The WINTER SESSION, 1874-5, will open on OCTOBER 1st, with an INTRODUCTORY ADDRESS at 3 o'clock, by Mr Andrew Clark, F R C S.

The Medical College attached to the Hospital provides the most complete means for the education of Students

The College Tutors superintend and assist all general students in their studies, especially those who are preparing for Examinations, without extra fee, and thus the necessity for obtaining private instruction is obviated.

General Fee for the Curriculum required by the Royal Colleges of Physicians and Surgeons, and the Society of Apothecaries, £90, which may be paid by instalments

For full particulars as to Entrance and other Scholarships, Clinical Appointments, Residence of Students, &c, apply to the Dean.

ROBERT KING, B.A. M.B, Dean.

TWO SCHOLARSHIPS and an EXHIBITION in Natural Science, and a SCHOLARSHIP and EXHIBITION in Classics and Mathematics, will be awarded by Open Competition in the First Week of October next, at St Mary's Hospital Medical School. For particulars apply to the Dean of the School,

A. B. SHEPHERD, M.B.

QUEENWOOD COLLEGE, near STOCKBRIDGE, HANTS.

Sound General Education for Boys.

Special attention to Science, particularly to Chemistry, both theoretical and practical.

References to Dr. Debus, F.R.S.; Dr. Frankland, F.R.S.; Dr. Roscoe, F.R.S.; Dr. Angus Smith, F.R.S.; Dr. Tyndall, F.R.S.; Dr. Voelcker, F.R.S.; Dr. Williamson, F.R.S.

The Term commences Tuesday, September 15.

C. WILLMORE, Principal.

ROYAL COUNCIL OF EDUCATION.—The Laboratory and Class-rooms of Berners College are open for Pupils EVERY DAY and EVENING. The subjects of the above Examinations can be studied either Privately or in Classes. Fees moderate. Analyses and investigations conducted.—Apply to Prof. E. V. GARDNER, F.E.S., F.S.A., 44, Berners Street, W.

SCIENCE TUITION by CORRESPONDENCE.—Subjects: Botany, Elementary Chemistry, and Practical Use of the Microscope. Pupils will have the use of a large Scientific Library, Apparatus, &c.—For Terms, address H., care of Macmillan & Co., 29, Bedford Street, Strand, London, W.C.

The REV. L. HENSLEY, Vicar of Hitchin, Herts, formerly Fellow and Assistant Tutor of Trinity College, Cambridge, receives several Pupils to prepare for the Universities.

A LARGE FARMER in one of the Southern Counties of England has a VACANCY for an Articled Pupil. Could live with the family.—Apply by letter to Mr. William Rutherford, care of the Editor of NATURE, Bedford Street, Strand, W.C.

A GENTLEMAN who contemplates going to South Africa, sheep-farming, wishes to meet with a Companion with some knowledge of Natural Science and Veterinary Surgery, who would join him on mutual terms to be agreed upon.—Address "Farmer," care of the Publisher of NATURE, 29, Bedford Street, Strand, London, W.C.

BEES, Four Hives of, for Sale, in Glass-backed Observatory Hives, 20s. and 25s. each.—A.B., 17, Bellamy Street, Balham.

The SECOND MASTER of a High-class Grammar School receives a few Resident Pupils. Special attention is given to the study of Natural Sciences.—For further particulars apply by letter to "Tripos," care of the Publisher of NATURE, 29, Bedford Street, Strand, London, W.C.

A LADY requires a RE-APPOINTMENT. German, French, the Elements of Natural Science, together with all the usual branches of Education. Highest References can be given.—Address, M.A.H., care of the Publishers of NATURE, 29, Bedford Street, Covent Garden, W.C.

WANTED.—SKELETONS of a few of the SMALLER BRITISH BIRDS, to complete a Collection.—Address particulars to F.Z.S., care of Editor of NATURE, Bedford Street, Strand, W.C.

NOTICE.—To Science Classes.—MOTTERSHEAD AND CO., LABORATORY FURNISHERS, EXCHANGE STREET, MANCHESTER, supply all the Apparatus enumerated in the SOUTH KENSINGTON LISTS FOR THE USE OF TEACHERS OF PHYSICAL SCIENCE (Light, Heat, Electricity, Magnetism, &c.), and will be happy to show intending purchasers specimens of the various Instruments, or to forward Estimates on application. Orders exceeding £2 in value delivered free to any railway station in England.

SUB-WEALDEN EXPLORATION

At Netherfield, near Battle.

The object of this work, commenced on the occasion of the meeting of the British Association at Brighton in 1872, is to ascertain the thickness of the Secondary Strata in the Wealden area, and the depth and nature of the underlying Palæozoic Formations.

The determination of the underground structure of the Wealden, is a point of great scientific interest, and one of *great national and economical importance*, as it may help to indicate the line taken underground by the coal-measures of Belgium and Somerset.

A sum of £3,000 has been collected by private subscription, and spent in this research, and a depth of 1,000 ft. reached, but as yet without any positive result. The beds traversed belong to the Lower Wealden, Purbeck and Portland series, Kimmeridge clay; and the boring has now reached the Oxford clay.

It is most desirable that the work should not be discontinued in the present stage for want of funds, and the Committee therefore make an earnest appeal for further assistance.

Subscriptions may be sent to HENRY WILLETT, Esq., Hon. Sec. and Treasurer, Arnold House, Brighton.

Signed, on behalf of the Committee,

ANDREW RAMSAY,
JOHN EVANS,
JOSEPH PRESTWICH.

THOMAS D. RUSSELL,

GEOLOGIST & MICROSCOPIST,

DIARY OF SOCIETIES.

LONDON

TUESDAY, AUGUST 18.

BIRKBECK SCIENTIFIC SOCIETY, at 8.—Opium, its Preparations and Uses: R. G. Madden.

TO SECRETARIES OF SCIENTIFIC AND LITERARY SOCIETIES.

It having been suggested that the publication of a weekly Diary in NATURE of the Meetings, &c. *of the various provincial* Scientific and Literary Societies *would be found very useful, not only to the Members of such Societies, but to all who are interested in scientific and literary subjects, the Publishers have determined to devote a portion of their Advertisement columns to this purpose, and to insert* NOTICES OF MEETINGS, SUBJECTS OF LECTURES, *&c.*, *at the nominal charge of* One Shilling *for each insertion.*

The Publishers of NATURE *will be glad if the Secretaries of Societies will aid them in their endeavours to make this weekly Diary as complete and useful as possible. Notices intended for insertion therein must be sent, addressed to the* Publishers, *by* Wednesday Mornings.

JUDSON'S DYES.—18 Colours, 6d. each.

RIBBONS, WOOL, SILK, FEATHERS,

Completely dyed in 10 minutes without soiling the hands.

Full Instructions supplied. Of all Chemists and Stationers.

JUDSON'S DYES.—Dyeing at Home.—JUDSON'S simple DYES are most useful and effectual. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES. Beautiful effects are thus produced in green, pink, brown, and many other colours—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES.—Ferns, Grasses, Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c., by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed.

JUDSON'S DYES.—Ink—Ink—Ink.—A Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water.

JUDSON'S DYES.—For Colouring Architectural Plans, &c.—Much trouble may be saved in grinding up colours to a uniform tint. They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades.

JUDSON'S DYES.—For Staining Wood.—Diluted with Water. They sink deeply into the fibre, and will not rub off. They form the most economical stain on record. Light Brown for mahogany colour is excellent; No. 2 Black for walnut; Canary for satin; also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE,

Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

INTERNATIONAL EXHIBITION PRIZE MEDAL AWARDS,

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS

is allowed by upwards of 500 Medical Men to be the most effective invention in the curative treatment of Hernia. The use of a steel spring, so often hurtful in its effects, is here avoided; a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, 2 inches below the hips, being sent to the manufacturer,

JOHN WHITE, 228, Piccadilly.

Price of a Single Truss, 16s., 21s., 26s. 6d., and 31s. 6d.
,, Double ,, 31s. 6d., 42s., and 52s. 6d.
,, Umbilical ,, 42s. and 52s. 6d.
Post-free.

ELASTIC STOCKINGS, KNEE-CAPS, &c., for Varicose Veins and all cases of weakness and Swellings of the Legs, Sprains, &c. They are porous, light in texture, and inexpensive, and drawn on over an ordinary stocking. Price 4s. 6d., 7s. 6d., 10s., and 16s. each. Postage free.

JOHN WHITE, Manufacturer, 228, Piccadilly, London.

HAIR COLOUR WASH.—By damping the hair or whiskers with this beautifully perfumed Wash, in 24 hours the hair becomes its original colour, and remains so by an occasional using. 10s. 6d., sent for P.O. order.—ALEX. ROSS, 248, High Holborn, London, and all Chemists.

NOSE MACHINE.—This is a contrivance which, applied to the nose for an hour daily, so directs the soft cartilage of which the member consists, that an ill-formed nose is quickly shaped to perfection. Anyone can use them, and without pain. Price 10s. 6d., sent carriage-free for P.O. order.—ALEX. ROSS, 248, High Holborn, London. Pamphlet sent for two stamps.

Ready this day, royal 8vo, 764 pp., cloth, with over 200 Illustrations, price 34s.

N.B.—Communications, &c., should be sent to the Editors at the above address.

NEWMAN'S ENTOMOLOGIST:

A MONTHLY ILLUSTRATED JOURNAL OF BRITISH INSECTS

Conducted by EDWARD NEWMAN, F.L.S. F.Z.S. &c.,

Late President of the Entomological Society.

The objects of the *Entomologist* are to give every information about Insects; more especially to work out the history of those which attack Fruit and Forest Trees, Vegetables, Root and Seed Crops, Greenhouse and Garden Plants, with a view to suggesting remedies. Notes, Observations, and Queries on every branch of the Science are solicited. To preserve a continuous record of the occurrence of rarities. To improve collections by offering a ready medium for the exchange of specimens.

Published on the First of every Month.

PRICE SIXPENCE.

SIMPKIN, MARSHALL, and Co, Stationers' Hall Court.

On the 1st of every Month, pp. 32, 8vo, with at least One Plate,

THE JOURNAL OF BOTANY,

BRITISH AND FOREIGN,

Edited by HENRY TRIMEN, M.B, F L.S., British Museum, assisted by J. G. BAKER, F.L.S., Royal Herbarium, Kew.

Subscriptions for 1874 (12*s.* post free in the United Kingdom) payable in advance to the publishers, Messrs. Ranken and Co, Drury House, St. Mary-le-Strand, London, W C., of whom may be obtained the volume for 1873 (price 16*s.* 6*d.* bound in cloth); also covers for the volume (price 1*s.*), and back numbers.

Now Ready. Price One Shilling.

ART

PICTORIAL AND INDUSTRIAL: A REVIEW.

FOR AUGUST 1874.
WITH CHOICE EXAMPLES FROM VARIOUS SOURCES,
REPRODUCED BY THE HELIOTYPE AND OTHER PERMANENT PROCESSES.
Edited by JOHN FORBES-ROBERTSON.
"ARS ARTIS CAUSÂ, ITAQUE HOMINIS."

CONTENTS OF AUGUST NUMBER—Our Illustrations:—1. "Henry Fawcett, Esq., M.P., and Mrs. Fawcett," by Ford Madox-Brown. 2. "The Knight in Armour," by Wm. Cave Thomas. 3. "Lesson in Network," by J. F. Millet.—The Exhibitions: The Royal Academy, the Munich Gallery.—The Decoration of St. Paul's Cathedral, No. 2.—Art Notes and Gossip.—Reviews.

SPECIAL NOTICE.—The Publishers take the present opportunity of informing the Readers of "Art" that fresh arrangements have been entered into for the reproduction in the forthcoming Numbers of choice examples of Painting, Engraving, Sculpture, Pottery, and Art objects generally. These will be representative both of British and Continental Schools.

N.B.—Artists and those connected with Artistic manufacture wishing their works to be reproduced in the pages of "Art," are requested to communicate with the Editor, through the Publishers.

London: SAMPSON LOW, MARSTON, LOW, & SEARLE, 188, Fleet Street, E.C.

HEALTH FOR ALL.

PRESTON'S PURIFYING PILLS.—The BLOOD MEDICINE. Sold in boxes at 7½d., 1s. 1½d., and 2s. 9d. Sent free on receipt of 8, 14, or 33 stamps.

This fine BLOOD Medicine is warranted not to contain a single particle of MERCURY, or any other Mineral, but to consist entirely of Medicinal Balsams PURELY VEGETABLE. One trial will convince anyone of their efficacy in all diseases of the Head, Chest, Heart, Lungs, Kidneys, Liver, Bowels, and likewise in Skin Diseases. These Pills create new, rich, and pure blood, and expel all impurities. They give IMMEDIATE relief, and very quickly cure, as a single box will prove.

They strengthen the constitution, improve the health, and greatly prolong life.

There is considerable saving in buying the larger boxes, as a 2s. 9d. box contains 100 pills.

As a family medicine they are greatly to be preferred, as they do not act upon the bowels, and are not in the slightest degree opening.

Prepared only by THOMAS PRESTON, M.B., at the City Medical Hall, 84, Long Lane, Smithfield, London.

⁂ The Government Stamp is on every box.

LUNG HEALER,

FOR DISEASES OF THE CHEST, THROAT, AND LUNGS.

PRESTON'S LUNG HEALER is a fine Balsamic Elixir which acts direct upon the Lungs, giving immediate relief, and eventually a permanent and lasting cure, even in cases where everything else has been tried and failed.

LUNG HEALER quickly cures Coughs, Colds, Asthma, Tightness or Wheezing at the Chest, difficulty of Breathing, Hoarseness, Phlegm, Tickling of the Throat, Shortness of Breath, Incipient Decline, Numbness and Weakness of the Lungs, Pains in the Chest, and Wasting Influenza, Hectic Fever, Night Sweats, Decay of the Lungs, Tubercular Disease, Expectoration, Palpitation, and all the symptoms of Impending Consumption.

LUNG HEALER strengthens the Lungs and thereby prevents Consumption. The Voice improves; Coughs and Colds are guarded against. It thoroughly eradicates hereditary consumptive taint if taken in time, and all who may be threatened with decline may rest in safety after a few doses of LUNG HEALER.

Sold in bottles at 2s. 9d. by THOMAS PRESTON, M.B., at the City Medical Hall, 84, Long Lane, Smithfield, London. The Government Stamp is on every bottle.

⁂ Order of any Chemist.

New Edition, corrected and improved, extra fcap. 8vo, 6s.

FIRST FORMS of VEGETATION. By the Rev. HUGH MACMILLAN, LL.D. F.R.S.E., Author of "Bible Teachings in Nature," &c. With Coloured Frontispiece and other Illustrations.

BRYANT & MAY'S
MATCHES.

This day, in 8vo, price 14s., with Woodcuts.

ETRUSCAN RESEARCHES. By Isaac TAYLOR, M.A. With Glossary and Index.

CONTENTS:—The Prologue—Tyrrhenians and Turanians—Ethnographical Notes on the Etruscan People—The Etruscan Mythology—The Etruscan Numerals—Epitaphs—Words denoting Kinship—The Bilingual Inscriptions—Forms of Dedication—The Ancient Vocabularies—Names—The Epilogue.

London: MACMILLAN & CO.

HOLLOWAY'S PILLS.—Inflammations Controlled.—All persons should be forewarned by the present sudden atmospheric changes, that their maintenance of health depends upon rectifying disorder in, and expelling impurities from the system without unnecessary delay. Cases of internal inflammation in the throat, lungs, liver, and bowels, are perpetually happening during the winter, and loudly call for a certain curative, such as Holloway's Pills; they supersede blood-letting, mercury, antimony, and similarly dangerous treatment. No invalid will be at a loss to treat his complaint on the surest and safest principles, who carefully reads through the printed directions folded round every box of these Pills. No danger can result from using this medicine, which may be accounted "The Antidote for Inflammation."

MESSRS. MACMILLAN & CO.'S PUBLICATIONS.

Owens College Essays.—Essays and Addresses by Professors and Lecturers of the Owens College, Manchester Published in Commemoration of the Opening of the New College Buildings, October 7th, 1873. 8vo, 14*s*.

A series of papers bearing on such questions of literature, science, and politics as are of special interest at the present time, and written by men who are fully competent to deal with the various subjects The following are specimens of the papers.—Original Research as a Means of Education, by Prof Roscoe, Solar Physics, by Prof. Balfour Stewart; On some Relations of Culture to Practical Life, by Prof. Greenwood; Some Historical Results of the Science of Language, by Prof. Wilkins; The Judicature Act of 1873 in its Relation to the History of the Judicial System in England, by Prof. Bryce; The Railways and the State, by Prof. Stanley Jevons, The Peace of Europe, by Prof. Ward, &c.

Professor Cairnes.—Some Leading Principles of Political Economy Newly Expounded. By J. E. CAIRNES, M A., Emeritus Professor of Political Economy in University College, London. 8vo, 14*s*. [This day

Contents:—Value—Supply and Demand—Normal Value—Market Value—Derivative Laws of Value—Rate of Wages—Demand for Commodities—Wages and Prices—Trades' Unionism—Doctrine of Comparative Cost—Wages and Foreign Trade, &c.

VICHY WATERS COMPANY,

27, MARGARET STREET, REGENT STREET, LONDON, W.

DEPOT FOR ALL FOREIGN MINERAL WATERS, VICHY.

The use of the Natural Waters of Vichy is extending vastly. They are most efficacious in all complaints arising from acidity. They make the blood more alkaline and less coagulable, and promote its circulation. In the derangement of the digestive functions, and in all the chronical disorders of the abdominal organs, their good effects are shown. The Waters of Vichy are alkaline and gaseous, and although medicinal they are agreeable to the palate, from their slightly acid taste. Of all mineral waters they are the most exported.

NEW VOLUME OF "*NATURE* SERIES."

THE TRANSIT OF VENUS.

BY GEORGE FORBES, B.A.,

PROFESSOR OF NATURAL PHILOSOPHY IN THE ANDERSONIAN UNIVERSITY, GLASGOW.

With numerous Illustrations. Crown 8vo.

MESSRS. MACMILLAN AND CO.'S NEW BOOKS.

TELEGRAPH and TRAVEL. DOUBLE NUMBER—FOURTH EDITION

A WEEKLY ILLUSTRATED JOURNAL OF SCIENCE.

*"To the solid ground
Of Nature trusts the mind which builds for aye."*—WORDSWORTH

No. 251, Vol. 10] THURSDAY, AUGUST 20, 1874 [Price Fourpence

Registered as a Newspaper at the General Post Office. [All Rights are Reserved.

WESTMINSTER HOSPITAL MEDICAL SCHOOL

(OPPOSITE WESTMINSTER ABBEY.)

The SESSION 1874-75 will commence on THURSDAY, October 1st, with an INTRODUCTORY LECTURE by Dr. Potter. The Address will be followed by the Distribution of the Prizes and a Conversazione in the Board Room

The new Physiological Laboratory will be completed by October 1st.

The Examinations for the Entrance Scholarships will be held on the 2nd and 3rd of October.

GEORGE COWELL, Dean

TWO SCHOLARSHIPS and an EXHIBITION in Natural Science, and a SCHOLARSHIP and EXHIBITION in Classics and Mathematics, will be awarded by Open Competition in the First Week of October next, at St. Mary's Hospital Medical School. For particulars apply to the Dean of the School,

A. B. SHEPHERD, M.B.

QUEENWOOD COLLEGE, near STOCKBRIDGE, HANTS.

Sound General Education for Boys.

Special attention to Science, particularly to Chemistry, both theoretical and practical.

References to Dr. Debus, F.R.S.; Dr. Frankland, F.R.S.; Dr. Roscoe, F.R.S.; Dr. Angus Smith, F.R.S.; Dr. Tyndall, F.R.S.; Dr. Voelcker, F.R.S.; Dr. Williamson, F.R.S.

The Term commences TUESDAY, September 15.

C. WILLMORE, Principal.

ANDERSON'S UNIVERSITY, GLASGOW.

The Trustees invite CANDIDATES for the CHAIR of CHEMISTRY vacant by the resignation of Professor Thorpe

Applications to be lodged, on or before the 1st of September, with the Subscriber, who will furnish information regarding the duties and terms of the appointment

J. B. KIDSTON, Secretary.

50, West Regent Street, Glasgow, 14th August, 1874.

ROYAL COUNCIL OF EDUCATION.—The Laboratory and Class-rooms of Berners College are open for Pupils EVERY DAY and EVENING. The subjects of the above Examinations can be studied either Privately or in Classes. Fees moderate. Analyses and investigations conducted.—Apply to Prof. E. V. Gardner, F.E.S., F.S.A., 44, Berners Street, W

ST. BARTHOLOMEW'S HOSPITAL AND COLLEGE.

SCHOLARSHIPS IN SCIENCE.

Two Scholarships in Science have been founded at St Bartholomew's Hospital:—

1 An Open Scholarship of the value of £100, tenable for one year, to be competed for in September. The subjects of examination are Physics, Chemistry, Botany, and Zoology. The successful candidate will be required to enter at St. Bartholomew's Hospital in October next.

2. Preliminary Scientific Scholarship of the value of £50, tenable for one year, to be competed for in October next by Students of the Hospital of less than six months' standing. The subjects of examination are identical with those of the Open Scholarship.

For further particulars and syllabus of subjects, application may be made personally or by letter to the Warden of the College, St. Bartholomew's Hospital.

LONDON LIBRARY,

12, ST. JAMES'S SQUARE.—Founded in 1841.

Patron—H R H The Prince of Wales.

President—Thomas Carlyle, Esq.

This Library contains 90,000 Volumes of Ancient and Modern Literature, in various Languages. Subscription, £3 a year, or £2 with Entrance Fee of £6; Life Membership, £26.

Fifteen Volumes are allowed to Country, and Ten to Town Members Reading Room open from Ten to half-past Six. Prospectus on application Catalogue, New Edition, in the press.

ROBERT HARRISON, Secretary and Librarian.

A HIGH WRANGLER is anxious to obtain an APPOINTMENT as TUTOR or MATHEMATICAL MASTER in a good School.—Address, T. L. K. M., care of Messrs Macmillan & Co., 29 and 30, Bedford Street, Covent Garden, London, W C.

A CAMBRIDGE B.A., First-class Natural Science Honours and Second-class Classical Honours, desires a TUTORSHIP Natural Science, French, Latin, Greek, Arithmetic. Good references.—A. N. T., care of Editor of Nature, Bedford Street, Strand, W.C.

To ASTRONOMERS and OTHERS.—A skilful Photographer, who is a Chemist and Amateur Astronomer, and possesses also some Literary Ability, wishes for an ENGAGEMENT in which these qualifications would be of service.—D.W., Doctor's Cottages, South Shore, Blackpool.

The REV. L. HENSLEY, Vicar of Hitchin, Herts, formerly Fellow and Assistant Tutor of Trinity College, Cambridge, receives several Pupils to prepare for the Universities.

A LARGE FARMER in one of the Southern Counties of England has a VACANCY for an Articled Pupil Could live with the family.—Apply by letter to Mr. William Rutherford, care of the Editor of NATURE, Bedford Street, Strand, W.C.

A GENTLEMAN who contemplates going to South Africa, sheep-farming, wishes to meet with a Companion with some knowledge of Natural Science and Veterinary Surgery, who would join him, on mutual terms to be agreed upon.—Address "Farmer," care of the Publisher of NATURE, 29, Bedford Street, Strand, London, W.C.

BEES, Four Hives of, for Sale, in Glass-backed Observatory Hives, 20s. and 25s. each.—A.B., 17, Bellamy Street, Balham.

The SECOND MASTER of a High-class Grammar School receives a few Resident Pupils. Special attention is given to the study of Natural Sciences.—For further particulars apply by letter to "Tripos," care of the Publisher of NATURE, 29, Bedford Street, Strand, London, W.C.

A LADY requires a RE-APPOINTMENT. German, French, the Elements of Natural Science, together with all the usual branches of Education. Highest References can be given.—Address, M.A.H., care of the Publishers of NATURE, 29, Bedford Street, Covent Garden, W.C.

WANTED.—SKELETONS of a few of the SMALLER BRITISH BIRDS, to complete a Collection.—Address particulars to F.Z.S., care of Editor of NATURE, Bedford Street, Strand, W.C.

A LADY, who is an accomplished Linguist and Musician, and has a fair acquaintance with the Elements of Natural Science, desires a RE-ENGAGEMENT.—For further particulars, address T. D. P., 9, Elm Road, N.W.

PRIVATE TUITION.—A Gentleman of very great experience with backward and delicate boys, has VACANCIES for THREE PUPILS. Special attention given to the study of the Nature Sciences. Terms reasonable.—Address, F.R.A.S., care of the Publisher of NATURE, Bedford Street, Covent Garden, W.C.

SCIENCE TEACHING by CORRESPON-DENCE. (See past advertisements.) Only time for TWO MORE PUPILS. Address H., care of Macmillan & Co., 29 and 30, Bedford Street, Strand, London, W.C.

TO NATURALISTS and GEOLOGISTS. —The ORFORD CASTLE COLLECTION OF CRAG FOSSILS (See Advertisement in NATURE of June 18th.) For particulars of these Collections address Fredc. Collingwood, Esq., F.G.S., 4, St. Martin's Place, Trafalgar Square, superscribed "ORFORD CASTLE FUND."

July 8th.

THOMAS D. RUSSELL,

GEOLOGIST & MICROSCOPIST,

48, ESSEX STREET, STRAND, W.C.

(Late of Arundel Street.)

British Rocks—100 Specimens ... ... One Guinea.
British Fossils—100 " ... ... One Guinea.

Collections and Specimens of
British Fossils from the Crag to the Silurian inclusive.

Detailed Catalogues post-free.

NOTICE.—To Science Classes.—MOT-TERSHEAD AND CO., LABORATORY FURNISHERS, EXCHANGE STREET, MANCHESTER, supply all the Apparatus enumerated in the SOUTH KENSINGTON LISTS FOR THE USE OF TEACHERS OF CHEMICAL OR PHYSICAL SCIENCE (including Light, Heat, Electricity, Magnetism, &c.), and will be happy to show intending purchasers specimens of the various Instruments, or to forward Estimates on application. Orders exceeding £2 in value delivered free to any railway station in England.

SUB-WEALDEN EXPLORATION

At Netherfield, near Battle.

The object of this work, commenced on the occasion of the meeting of the British Association at Brighton in 1872, is to ascertain the thickness of the Secondary Strata in the Wealden area, and the depth and nature of the underlying Palæozoic Formations.

The determination of the underground structure of the Wealden, is a point of great scientific interest, and one of *great national and economical importance*, as it may help to indicate the line taken underground by the coal-measures of Belgium and Somerset.

A sum of £3,000 has been collected by private subscription, and spent in this research, and a depth of 1,000 ft. reached, but as yet without any positive result. The beds traversed belong to the Lower Wealden, Purbeck and Portland series, Kimmeridge clay; and the boring has now reached the Oxford clay.

It is most desirable that the work should not be discontinued in the present stage for want of funds, and the Committee therefore make an earnest appeal for further assistance.

Subscriptions may be sent to HENRY WILLETT, Esq., Hon. Sec. and Treasurer, Arnold House, Brighton.

Signed, on behalf of the Committee,

ANDREW RAMSAY,
JOHN EVANS,
JOSEPH PRESTWICH.

TRUSSES (Self-adjusting), in use for the last sixty years, and same as worn by his late Majesty William IV. From 10s. each. SALMON ODY & CO., by appointment to the Army and Navy, 292, Strand, London. Price List post free.

CHEST EXPANDER and TROUSERS BRACE combined, &c.; Ladies' Chest Expanders from 5s. 6d.—SALMON ODY & CO., 292, Strand, London. Established 1806.

ELASTIC STOCKINGS for Varicose Veins or Weak Joints; and LADIES' ABDOMINAL BELTS, made to any size. Directions for self-measurement and prices post free. SALMON ODY & CO., 292, Strand, London.

HENRY CROUCH'S

NEW CATALOGUE OF

MICROSCOPES, OBJECTIVES, &c.

With Practical Hints upon the Use of the Accessory Apparatus, fully illustrated, forwarded on receipt of 6 Stamps.

HENRY CROUCH,
66, BARBICAN, LONDON, E.C.,

Nearly opposite Aldersgate Street Station, Metropolitan Railway, near the General Post Office.

HAIR COLOUR WASH.—By damping the hair or whiskers with this beautifully perfumed Wash, in 24 hours the hair becomes its original colour, and remains so by an occasional using. 10s. 6d., sent for P.O. order.—ALEX. ROSS, 248, High Holborn, London; and all Chemists.

NOSE MACHINE.—This is a contrivance which, applied to the nose for an hour daily, so directs the soft-cartilage of which the member consists, that an ill-formed nose is quickly shaped to perfection. Anyone can use them, and without pain. Price 10s. 6d., sent carriage-free for P.O. order.—ALEX. ROSS, 248, High Holborn, London. Pamphlet sent for two stamps.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS

is allowed by upwards of 500 Medical Men to be the most effective invention in the curative treatment of Hernia. The use of a steel spring, so often hurtful in its effects, is here avoided; a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, 2 inches below the hips, being sent to the manufacturer,

JOHN WHITE, 228, Piccadilly.

Price of a Single Truss, 16s., 21s., 26s. 6d., and 31s. 6d. } Post-free
" Double " 31s. 6d., 42s., and 52s. 6d.
" Umbilical " 42s. and 52s. 6d.

ELASTIC STOCKINGS, KNEE-CAPS,

&c., for Varicose Veins and all cases of weakness and Swellings of the Legs, Sprains, &c. They are porous, light in texture, and inexpensive, and drawn on over an ordinary stocking. Price 4s. 6d., 7s. 6d., 10s., and 16s. each. Postage free.

JOHN WHITE, Manufacturer, 228, Piccadilly, London.

HENRY S. KING & CO.'S LIST.

SENSATION AND INTUITION. Studies in Psychology and Æsthetics. By JAMES SULLY. Demy 8vo, 10s. 6d.

"... In conclusion, we beg to thank Mr. Sully for a meritorious and successful attempt to popularise valuable and not very tractable departments of science."—*Academy.*

The PHYSICS and PHILOSOPHY of the SENSES; or, the Mental and the Physical in their Mutual Relation. By R. S. WYLD, F.R.S.E. Illustrated by several Plates. [Preparing.

The author's object is twofold: first, to supply a Manual of the Senses, embracing the more important discoveries of recent times; second, in discussing the subject of Life, Organisation, Sensibility, and Thought, to demonstrate, in opposition to the materialistic theory, that the Senses, no less than Reason, furnish proof that an immaterial and spiritual element is the operative element in nature.

PROFESSOR ERNST HAECKEL.—The HISTORY of CREATION, a Popular Account of the Development of the Earth and its Inhabitants, according to the Theories of Kant, Laplace, Lamarck, and Darwin. Translated by E. RAY LANKESTER, M.D. With Coloured Plates and Genealogical Trees of the various Groups of both Plants and Animals. 2 vols. post 8vo. [Preparing.

Dr. W. B. CARPENTER's PRINCIPLES of MENTAL PHYSIOLOGY. With their Applications to the Training and Discipline of the Mind, and the Study of its Morbid Conditions. Post 8vo, Illustrated, 12s.

"This valuable book . . . Let us add that nothing we have said, or in any limited space could say, would give an adequate conception of the valuable and curious collection of facts bearing on morbid mental conditions, the learned physiological exposition, and the treasure-house of useful hints for mental training, which make this large and yet very amusing as well as instructive book an encyclopædia of well-classified and often very startling psychological experiences."—*Spectator.*

ENGLISH PSYCHOLOGY, CONTEMPORARY. From the French of Professor Th. RIBOT. Large post 8vo, price 9s. An Analysis of the Views and Opinions of the following Metaphysicians, as expressed in their writings:—

James Mill, Alexander Bain, John Stuart Mill, George H. Lewes, Herbert Spencer, Samuel Bailey.

"The task which M. Ribot set himself, he has performed with very great success."—*Examiner.*

PHYSIOLOGY for PRACTICAL USE. By various Writers. Edited by JAMES HINTON. 2 vols. crown 8vo, with 50 Illustrations, 12s. 6d.

"We never saw the popular side of the science of Physiology better explained than in these two volumes."—*Standard.*

THE INTERNATIONAL SCIENTIFIC SERIES.

1. Fourth Edition, 5s. Professor Tyndall's Forms of Water in Clouds and Rivers, Iceland Glaciers, &c. Illustrated.
2. Second Edition, 4s. Walter Bagehot's Physics and Politics.
3. Second Edition, 5s. Dr. Edward Smith's Foods. Illustrated.
4. Third Edition, 4s. Prof. Bain's Mind and Body. Illustrated.
5. Third Edition, 5s. Herbert Spencer's Study of Sociology.
6. Second Edition, 5s. Prof. Balfour Stewart's Conservation of Energy. Illustrated.
7. Second Edition, 5s. Dr. J. Bell Pettigrew's Animal Locomotion. Illustrated.
8. Second Edition, 5s. Dr. Henry Maudsley's Responsibility in Mental Disease.
9. Second Edition, Illustrated, 5s. Prof. Josiah P. Cooke's New Chemistry.
10. Second Edition, 5s. Prof. Sheldon Amos's Science of Law.
11. Prof. E. J. Marey's Animal Mechanism. Illustrated. [Shortly.
12. Dr. Herman Vogel's Chemical Effects of Light and Photography. Illustrated [In the press.

HENRY S. KING & CO., 65, Cornhill, and 12, Paternoster Row.

CLARENDON PRESS PUBLICATIONS.

A TREATISE ON ELECTRICITY AND MAGNETISM. By J. CLERK MAXWELL, M.A. F.R.S., Professor of Experimental Physics in the University of Cambridge. 2 vols. 8vo, £1 11s. 6d.

The GEOLOGY of the VALLEY of the THAMES. By JOHN PHILLIPS, M.A. F.R.S., Professor of Geology in the University of Oxford. With Coloured Map and numerous Illustrations. 8vo, 21s.

"It does not often fall to our lot to open a book devoted to Science, and to derive from it the large amount of pleasure, and at the same time of real instruction, which we have found in the pages of this volume."—*Athenæum.*

VESUVIUS. By John Phillips, M.A., F.R.S. With numerous Maps and Illustrations. Crown 8vo, 10s. 6d.

"Professor Phillips has undertaken to give an authentic history of Vesuvius from the days of Crassus to the end of 1868, and to explain the phenomena of the burning mountain according to the laws of a rigid induction. His plan has been successfully carried out, and has resulted in a work of high value."—*Pall Mall Gazette.*

DESCRIPTIVE ASTRONOMY. A Handbook for the General Reader, and also for practical Observatory work. With 224 Illustrations and numerous Tables. By G. F. CHAMBERS, F.R.A.S., Barrister-at-Law. Demy 8vo, cloth, 856 pp., price 21s.

CHEMISTRY FOR STUDENTS. By A. W. WILLIAMSON, Phil. Doc. F.R.S., Professor of Chemistry, University College, London. New Edition, with Solutions. Extra fcap. 8vo, cloth, price 8s. 6d.

EXERCISES IN PRACTICAL CHEMISTRY. By A. G. VERNON HARCOURT, M.A. F.R.S., Senior Student of Christ Church, and Lee's Reader in Chemistry; and H. G. MADAN, M.A., Fellow of Queen's College, Oxford. Series I., Qualitative Exercises. Second Edition. Crown 8vo, price 7s. 6d.

AN ELEMENTARY TREATISE ON HEAT. By BALFOUR STEWART, LL.D. F.R.S., Professor of Natural History in Owens College, Manchester. Ext. fcap. 8vo, with numerous Woodcuts and Diagrams, 7s. 6d. New Edition, revised and enlarged.

"The publication of this manual is exceedingly well-timed; it includes within narrow limits the leading facts and principles of this younger-born of the Sciences, and for the mastery of the greater portion of the contents only requires ordinary intelligence on the part of the reader."—*Spectator.*

FORMS OF ANIMAL LIFE. Being Outlines of Zoological Classification based upon Anatomical Investigation, and illustrated by Descriptions and Specimens and of Figures. By G. ROLLESTON, M.D. F.R.S., Linacre Professor of Physiology, Oxford. Demy 8vo, price 16s.

A TREATISE on ACOUSTICS. By W. J. DONKIN, F.R.S., Savilian Professor of Astronomy in the University of Oxford. Crown 8vo, price 7s. 6d.

A SYSTEM OF PHYSICAL EDUCATION: Theoretical and Practical. With 346 Illustrations drawn by A. MACDONALD, of the Oxford School of Art. By ARCHIBALD MACLAREN, The Gymnasium, Oxford. Ext. fcap. 8vo, price 7s. 6d.

"The work before us is one which should be in the hands of every schoolmaster and schoolmistress. It is marked in every line by good sense, and is so clearly written that no one can mistake its rules."—*Lancet.*

ELEMENTS OF NATURAL PHILOSOPHY. By Sir W. THOMSON, LL.D. D.C.L. F.R.S., Professor of Natural Philosophy, Glasgow: and P. G. TAIT, M.A., Professor of Natural Philosophy, Edinburgh. Part I, 8vo, 9s.

Oxford: Printed at the Clarendon Press, and Published by MACMILLAN & CO., London, Publishers to the University.

SCIENTIFIC WORKS PUBLISHED BY J. & A. CHURCHILL.

CHEMISTRY, INORGANIC & ORGANIC: with Experiments. By CHARLES L. BLOXAM, Professor of Chemistry in King's College, London, Professor of Chemistry in the Department for Artillery Studies, Woolwich. Second Edition. With 295 Engravings on Wood. 8vo, 16s.

By the same Author.

LABORATORY TEACHING; or, Progressive Exercises in Practical Chemistry, with Analytical Tables. Third Edition. With 89 Engravings, crown 8vo, 5s. 6d.

PRACTICAL CHEMISTRY, including ANALYSIS. By JOHN E. BOWMAN and C. L. BLOXAM. Sixth Edition. With 98 Engravings on Wood, fcap. 8vo, 6s. 6d.

NOTES for STUDENTS in CHEMISTRY: being a Syllabus of Chemistry and Practical Chemistry. By ALBERT J. BERNAYS, Professor of Chemistry at St. Thomas's Hospital. Fifth Edition, revised. Fcap 8vo, 3s 6d.

A MANUAL of ELEMENTARY CHEMISTRY, Theoretical and Practical. By G FOWNES, F R.S. Edited by HENRY WATTS, B A. F.R S. Eleventh Edition. With 163 Wood Engravings, crown 8vo, 15s

FRESENIUS' QUALITATIVE ANALYSIS Translated by ARTHUR VACHER. Eighth Edition, with Coloured Plate and Wood Engravings, 8vo, 12s. 6d.

Also,

FRESENIUS' QUANTITATIVE ANALYSIS. Sixth (reprint of the 4th) Edition. With 186 Wood Engravings, 8vo, 18s.

The FIRST STEP in CHEMISTRY. By ROBERT GALLOWAY, Professor of Applied Chemistry in the Royal College of Science for Ireland. Fourth Edition, with Engravings, fcap. 8vo, 6s 6d.

By the same Author

A MANUAL of QUALITATIVE ANALYSIS. Fifth Edition, with Engravings, post 8vo, 8s 6d.

FIRST PRINCIPLES of MODERN CHEMISTRY By U J KAY-SHUTTLEWORTH, M P. Second Edition, crown 8vo, 4s. 6d.

INTRODUCTION to INORGANIC CHEMISTRY. By WM. G. VALENTIN, F C.S, Principal Demonstrator of Practical Chemistry in the Royal School of Mines and Science Training Schools, South Kensington. With 82 Engravings, 8vo, 6s. 6d.

By the same Author.

QUALITATIVE CHEMICAL ANALYSIS. With 19 Engravings, 8vo, 7s. 6d. (The Tables separately, 2s. 6d.)

HANDBOOK of CHEMICAL TECHNOLOGY. Containing Chemical Metallurgy, Alloys, and Preparations made and obtained from Metals; Crude Materials and Products of Chemical Industry; Glass, Ceramic Ware, Gypsum, Lime, Mortar; Vegetable Fibres, Animal Substances, Dyeing and Calico Printing, Artificial Light; Fuel and Heating Apparatus. By RUDOLF WAGNER, Professor at the University of Wurtzburg. Translated from the Eighth Edition, with Additions, by WILLIAM CROOKES, F.R.S. With 336 Engravings, 8vo, 25s.

The HUMAN EYE, with Remarks on the Eyes of Inferior Animals, a Popular Description. By W. WHALLEY, M R C.S. With 40 Engravings, fcap. 8vo, 3s

FOOD and DIETETICS Physiologically and Therapeutically Considered. By F. W PAVY, M D F R S, Physician to, and Lecturer on Physiology at, Guy's Hospital. 8vo, 16s.

OZONE and ANTOZONE: their History and Nature.

WHEN,
WHERE,
WHY,
HOW,
IS OZONE OBSERVED IN THE ATMOSPHERE?

By CORNELIUS B FOX, M.D. M.R C.P Lond, Fellow of the British, and Member of the Scottish, Meteorological Societies. With Wood Engravings, Lithographs, and Chromo-lithographs, 8vo, 12s 6d

COOLEY'S CYCLOPÆDIA of PRACTICAL Receipts, Processes, and Collateral Information in the Arts, Manufactures, Professions, and Trades, including Pharmacy and Domestic Economy and Hygiène. Designed as a General Book of Reference for the Manufacturer, Tradesman, Amateur, and Heads of Families. Fifth Edition, Revised and partly Re-written by Professor RICHARD V. TUSON, F C.S., assisted by several Scientific Contributors. 8vo, 28s.

A MANUAL of BOTANY: including the Structure, Functions, Classifications, Properties, and Uses of Plants. By ROBERT BENTLEY, F L.S., Professor of Botany, King's College, and to the Pharmaceutical Society. Third Edition, with 1,138 Wood Engravings, crown 8vo, 14s.

The MICROSCOPE and its REVELATIONS, By W B CARPENTER, M.D F.R.S. Fifth Edition, with more than 500 Wood Engravings, crown 8vo. [In the press

A MANUAL of MICROSCOPIC MOUNTING; with Notes on the Collection and Examination of Objects. By JOHN H MARTIN, Author of "Microscopic Objects" With upwards of 100 Engravings, 8vo, 7s 6d.

The QUARTERLY JOURNAL of MICROSCOPICAL SCIENCE (Established in 1852) Edited by J. F PAYNE, M D, Assistant-Physician at St Thomas's Hospital; E RAY LANKESTER, M A., Fellow of Exeter College, Oxford, and W. T. THISELTON DYER, M A. B Sc, Professor of Botany to the Royal Horticultural Society. (Annual Subscription, 16s., Single Numbers, 4s)

HANDBOOK for the PHYSIOLOGICAL LABORATORY By E KLEIN, M D., Assistant-Professor in the Pathological Laboratory of the Brown Institution, London; J. BURDON-SANDERSON, M.D. F.R S., Professor of Practical Physiology in Trinity College, London, MICHAEL FOSTER, M A M.D. F R S, Prelector of Physiology in Trinity College, Cambridge, and J LAUDER BRUNTON, M D. D.Sc, Lecturer on Materia Medica at St Bartholomew's Hospital. Edited by J. BURDON-SANDERSON Two volumes, with 123 Plates, 8vo, 24s.

The THANATOPHIDIA of INDIA; being a Description of the Venomous Snakes of the Indian Peninsula With an Account of the Influence of their Poison on Life, and a Series of Experiments. By J FAYRER, M D C S.I, Honorary Physician to the Queen, late President of the Asiatic Society of Bengal. Second Edition, with 31 Plates (28 coloured), folio, £7 7s

CHAUVEAU'S COMPARATIVE ANATOMY of the DOMESTICATED ANIMALS Translated from the Second French Edition, and edited by GEORGE FLEMING, F R G S., Veterinary Surgeon, Royal Engineers With 450 Engravings on Wood, 8vo, £1 11s 6d.

A MANUAL of the ANATOMY of VERTEBRATE ANIMALS. By Prof. HUXLEY, LL D. F.R S. With numerous Engravings, fcap. 8vo, 12s.

By the same Author

INTRODUCTION to the CLASSIFICATION of ANIMALS. With Engravings, 8vo, 6s

NOTES on COMPARATIVE ANATOMY; a Syllabus of a Course of Lectures delivered at St Thomas's Hospital By WILLIAM MILLER ORD, M.B Lond, M R.C P, Assistant-Physician to the Hospital, and Lecturer in its Medical School. Crown 8vo, 5s

The STUDENT'S GUIDE to *ZOOLOGY*. By ANDREW WILSON, Lecturer on Zoology, Edinburgh. With Engravings, 6s. 6d

NOTES on NATURAL PHILOSOPHY, By G F RODWELL, F.R.A S., Science Master in Marlborough College, late Lecturer on Natural Philosophy in Guy's Hospital With 48 Wood Engravings, fcap 8vo, 5s

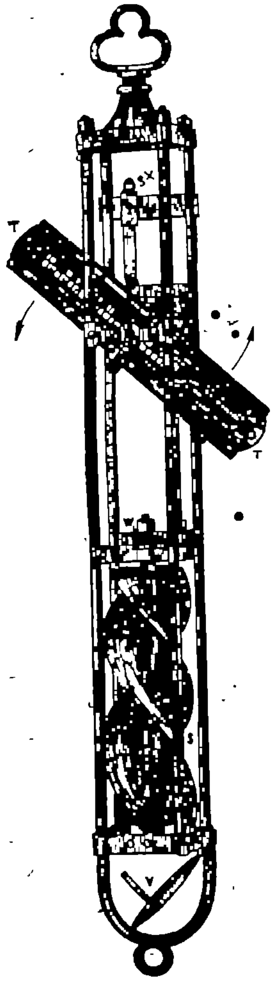
The ELEMENTS of NATURAL PHILOSOPHY. By CHARLES BROOKE, M B M A F R S Based on the work of the late Dr GOLDING BIRD. Sixth Edition, with 700 Engravings on Wood, fcap 8vo, 12s 6d

An INTRODUCTION to PHYSICAL MEASUREMENTS; with Appendices on Absolute Electrical Measurements, &c. By Dr. F KOHLRAUSCH Translated from the Second German Edition by T H. WALLER, B A B Sc, and H. S PROCTER, F.C S With Engravings, 8vo, 12s.

HARDWICH'S MANUAL of PHOTOGRAPHY. By GEORGE DAWSON, M A. Ph D Lecturer on Photography in King's College, London. Eighth Edition, with Engravings, fcap, 8vo, 5s 6d.

A MANUAL of PHOTOGRAPHIC MANIPULATION. By LAKE PRICE. Second Edition, Revised and Enlarged, with numerous Engravings, crown 8vo, 6s 6d.

J. & A. CHURCHILL, NEW BURLINGTON STREET.



NEGRETTI & ZAMBRA'S
PATENT
RECORDING AND DEEP-SEA THERMOMETER.

THIS Thermometer differs from all other Registering or Recording Thermometers in the following important particulars :—

I.—The Thermometer contains only mercury, without any admixture of alcohol or other fluid.

II.—It has no indices or springs, and its indications are by the column of mercury.

III.—It can be carried in any position, and cannot possibly be put out of order, except by actual breakage of the instrument.

And, lastly, it will indicate and record the exact temperature, at any depth of the sea, irrespective of either warm or cold current or stratum through which the Thermometer may have to pass in its descent or ascent. This last qualification renders this Instrument vastly superior to the Thermometers now in use in the *Challenger* and other Deep-sea Expeditions; for, *under certain conditions of temperature*, the old Thermometers on "SIXES" principle have failed to give correct results. This we have on the authority of a Report to the Admiralty by Captain G. S. Nares, of H.M.S. *Challenger*, where, in speaking of temperature near the pack edge of the ice, he says :—

"*At a short distance from the pack the surface water rose to* 32°, *but at a depth of* 40 *fathoms we always found the temperature to be* 29°; *this continued to* 300 *fathoms, the depth in which most of the icebergs float, after which there is a stratum of slightly warmer water of* 33° *or* 34°. *As the Thermometers had to pass through these two belts of water before reaching the bottom, the indices registered those temperatures, and it was impossible to obtain the exact temperature of the bottom whilst near the ice.*"

This new Recording Thermometer, in connection with a simple clock, will also give the exact temperature of the air at any hour of the day or night, a most important addition to our Meteorological Instruments, especially to observers in many parts of the world who are engaged in taking simultaneous observations with our own at fixed Greenwich time.—Illustrations and Prices for this form of the Instrument upon application.

NEGRETTI & ZAMBRA,
OPTICIANS AND METEOROLOGICAL INSTRUMENT MAKERS TO THE ROYAL OBSERVATORY, THE BRITISH AND FOREIGN GOVERNMENTS,
Holborn Viaduct; 122, Regent Street; & 45, Cornhill, London.

VICHY WATERS COMPANY,
27, MARGARET STREET, REGENT STREET, LONDON, W.
DEPOT FOR ALL FOREIGN MINERAL WATERS, VICHY.

The use of the Natural Waters of Vichy is extending vastly. They are most efficacious in all complaints arising from acidity. They make the blood more alkaline and less coagulable, and promote its circulation. In the derangement of the digestive functions, and in all the chronical disorders of the abdominal organs, their good effects are shown. The Waters of Vichy are alkaline and gaseous, and although medicinal they are agreeable to the palate, from their slightly acid taste. Of all mineral waters they are the most exported.

WORKS BY THE LATE PROFESSOR PHILLIPS, F.R.S.

The GEOLOGY of the VALLEY of the THAMES. By John Phillips, M.A., F.R.S., Professor of Geology in the University of Oxford. With Coloured Map and numerous Illustrations. 8vo. 21*s.*

"It does not often fall to our lot to open a book devoted to Science, and to derive from it the large amount of pleasure, and at the same time of real instruction, which we have found in the pages of this volume."—*Athenæum.*

ENGLISH CATALOGUE.

BOOK-BUYERS *wishing to obtain the fullest information respecting any Work published during the Years* 1863-1871 *inclusive, should order immediately the New Volume, just published, of*

The English Catalogue of Books

Published in Great Britain and the Colonies during 1863 to 1871 inclusive,

COMPRISING ALSO

THE MOST IMPORTANT AMERICAN PUBLICATIONS.

This Volume, occupying over 450 pages, shows the Titles of 32,000 NEW BOOKS and NEW EDITIONS issued during Nine Years, with the Size, Price, and Publisher's Name; the Lists of LEARNED SOCIETIES, PRINTING CLUBS, and other LITERARY ASSOCIATIONS, and the Books issued by them, as also the PUBLISHERS' SERIES and COLLECTIONS—altogether forming an indispensable adjunct to the Bookseller's Establishment, as well as to every Learned and Literary Club and Association. 30s. half bound.

BOOK-BUYERS *seeking information respecting any Work published during the Years* 1835-1862 *inclusive, should buy the previous Volume of*

The English Catalogue,

Of which only a few copies remain on sale. Strongly half-bound, price 45s.

BOOK-BUYERS *may also obtain the*

Index Volume to the English Catalogue, 1835-1862,

In which they will find a complete classification of all the Works in that Catalogue arranged alphabetically on a novel, simple, and most convenient plan, which will enable the seeker to find at once all needful particulars respecting any Work on any subject he may be in search of. Strongly half-bound, price 26s.

An Index Volume to the English Catalogue, 1863-1871.

Is now in active preparation, and will be ready for publication in the course of a few months.

BOOK-BUYERS *are also respectfully reminded that an*

Annual Supplement to the English Catalogue

Has been published for many years. That for the Year 1873 may now be had.

It contains a COMPLETE LIST, alphabetically arranged, of all the WORKS PUBLISHED DURING the YEAR, and also a COMPLETE INDEX of SUBJECTS, on the same plan as the Index described above. Sent free by post, price 5s.

Supplements, 1863, 1856, 1867, 3s. 6d. each; 1866, 1867 to 1872, 5s. each, may also be had.

BOOK-BUYERS *are invited to subscribe for the*

Publishers' Circular and General Record of British and Foreign Literature;

Giving a transcript of the title-page of EVERY WORK PUBLISHED in GREAT BRITAIN, and EVERY WORK of INTEREST PUBLISHED ABROAD, with Lists of all the Publishing Houses.

Published regularly on the 1st and 15th of every Month, and forwarded post free to all parts of the world on payment of 8s. per annum.

London: SAMPSON LOW, MARSTON, LOW, & SEARLE,
Crown Buildings, 188, Fleet Street.

STANDARD TEXT-BOOKS IN NATURAL SCIENCE.

Just published

A MANUAL OF BOTANY, Anatomical and Physical, for the Use of Students. By ROBERT BROWNE, M.A. Ph.D. F.R.G.S., Lecturer on Botany under the Science and Art Department of the Committee of the Privy Council on Education. Crown 8vo, with numerous Illustrations, 12s. 6d.

A MANUAL of PALÆONTOLOGY, for the Use of Students. With a General Introduction on the Principles of Palæontology. By HENRY ALLEYNE NICHOLSON, M.D. F.R.S.E. F.G.S. &c., Professor of Geology in the Royal College of Science, Dublin. Crown 8vo, with upwards of 400 Engravings, 15s.

INTRODUCTION to the STUDY of BIOLOGY. By the Same. Crown 8vo, with numerous Engravings, 5s.

A MANUAL of ZOOLOGY, for the Use of Students. With a General Introduction on the Principles of Zoology. By the Same. Third Edition. Crown 8vo, pp 706, with 280 Engravings on Wood, 12s. 6d.

TEXT-BOOK of ZOOLOGY, for the Use of Schools. By the Same. Second Edition, enlarged. Crown 8vo, with 188 Engravings on Wood, 6s.

ECONOMIC GEOLOGY; or, Geology in its Relations to the Arts and Manufactures. By DAVID PAGE, LL.D. F.G.S. &c., Professor of Geology in the Durham University College of Physical Science, Newcastle. [In the press.

GEOLOGY for GENERAL READERS. A Series of Popular Sketches in Geology and Palæontology. By the Same. Third Edition, enlarged, 6s.

HANDBOOK of GEOLOGICAL TERMS, GEOLOGY, and PHYSICAL GEOGRAPHY. By the Same. Second Edition, enlarged, 7s. 6d.

INTRODUCTORY TEXT-BOOK of GEOLOGY. By the Same. With Engravings on Wood, and Glossarial Index. Tenth Edition, 2s. 6d.

ADVANCED TEXT-BOOK of GEOLOGY. Descriptive and Industrial. By the Same. With Engravings, and Glossary of Scientific Terms. Fifth Edition, revised and enlarged, 7s. 6d.

WM. BLACKWOOD & SONS, Edinburgh and London.

AN ELEMENTARY TREATISE ON STEAM. By JOHN PERRY, B.E., Whitworth Scholar, F.C.S., late Lecturer on Physics at Clifton College. 4s. 6d.

When boys have acquired an elementary knowledge of Experimental Mechanics and Heat it is well to teach them the application of the principles they have learnt, by some such course as is sketched in the present work, before proceeding to Electricity, Acoustics, and Light. The numerous examples and exercises will prove useful in all Physics classes; whether the whole course is followed or not; to candidates for scholarships at the Universities and to boys preparing for the examinations at Woolwich and Cooper's Hill.

MACMILLAN & CO., LONDON.

CHEMICAL SOCIETY.

An INDEX to the JOURNAL of the CHEMICAL SOCIETY, 1841–1872, is now ready, including both Authors' Names and Subjects. It may be obtained by Fellows at the Society's Rooms, price 5s., by post 5s 4d; and by Non-Fellows at the Publisher's, J. Van Voorst, 1, Paternoster Row, price 10s.

The JOURNAL of the CHEMICAL SOCIETY now contains Abstracts of all Papers on Chemistry, and its relations to Physiology and the Arts, published in British or Foreign Journals. It is issued monthly, and may be obtained by Non-Fellows of Mr Van Voorst by a subscription of £1 1s.

Ready this day, royal 8vo, 764 pp., cloth, with over 200 Illustrations, price 34*s.*

ELEMENTS OF METALLURGY:

A PRACTICAL TREATISE ON THE ART OF EXTRACTING METALS FROM THEIR ORES.

By J. ARTHUR PHILLIPS, M. Inst. C.E., F.G.S., F.C.S., &c.

Ancien Elève de l'Ecole des Mines, Paris; Author of "Mining and Metallurgy of Gold and Silver," &c.

"Will be eagerly sought for by Students in Science and Art, as well as by practical workers in metals."—*Colliery Guardian.*

"The value of this work is almost inestimable."—*Mining Journal.*

London: CHARLES GRIFFIN & CO., 10, Stationers' Hall Court.

BROWNING'S MINIATURE SPECTROSCOPE.

Dimensions: $\frac{7}{16}$ diameter, 3 inches long.

This Instrument will show many of Fraunhofer's lines, the bright lines of the metals and gases, and the absorption bands in coloured gases, crystals, or liquids.

Price, with five prisms	£1 2 0
Ditto, with adjustable slit	1 13 0

THE "POPULAR" SPECTROSCOPE.

This Instrument, now for the first time introduced, is a perfect instrument for the use of Chemists, or in cases where very great dispersive power is desirable. The Instrument has a prism of extra dense flint glass; the Telescopes have achromatic object-glasses; the Circle is divided to read to single minutes, and the whole of the Stand is of brass, highly finished, in Cabinet complete.

Price £5 0 0

JOHN BROWNING,

OPTICAL AND PHYSICAL INSTRUMENT MAKER

To Her Majesty's Government, the Royal Society, the Royal Observatories of Greenwich and Edinburgh, &c. &c.

63, STRAND, W.C., LONDON.

TO SECRETARIES OF SCIENTIFIC AND LITERARY SOCIETIES.

It having been suggested that the publication of a weekly Diary in NATURE of the Meetings, &c. *of the various provincial* Scientific and Literary Societies *would be found very useful, not only to the Members of such Societies, but to all who are interested in scientific and literary subjects, the Publishers have determined to devote a portion of their Advertisement columns to this purpose, and to insert* NOTICES OF MEETINGS, SUBJECTS OF LECTURES, *&c., at the nominal charge of* One Shilling *for each insertion.*

The Publishers of NATURE *will be glad if the Secretaries of Societies will aid them in their endeavours to make this weekly Diary as complete and useful as possible. Notices intended for insertion therein must be sent, addressed to the* Publishers, *by* Wednesday Mornings.

ART

PICTORIAL AND INDUSTRIAL: A REVIEW.

FOR AUGUST 1874.
WITH CHOICE EXAMPLES FROM VARIOUS SOURCES,
REPRODUCED BY THE HELIOTYPE AND OTHER PERMANENT PROCESSES.
Edited by JOHN FORBES-ROBERTSON.
"ARS ARTIS CAUSÂ, ITAQUE HOMINIS."

CONTENTS OF AUGUST NUMBER—Our Illustrations:—1. "Henry Fawcett, Esq., M.P., and Mrs. Fawcett," by Ford Madox-Brown. 2. "The Knight in Armour," by Wm. Cave Thomas. 3. "Lesson in Network," by J. F. Millet.—The Exhibitions: The Royal Academy, the Munich Gallery.—The Decoration of St. Paul's Cathedral, No. 2.—Art Notes and Gossip.—Reviews.

SPECIAL NOTICE.—The Publishers take the present opportunity of informing the Readers of "Art" that fresh arrangements have been entered into for the reproduction in the forthcoming Numbers of choice examples of Painting, Engraving, Sculpture, Pottery, and Art objects generally. These will be representative both of British and Continental Schools.

N.B.—Artists and those connected with Artistic manufacture wishing their works to be reproduced in the pages of "Art," are requested to communicate with the Editor, through the Publishers.

London: SAMPSON LOW, MARSTON, LOW, & SEARLE, 188, Fleet Street, E.C.

HEALTH FOR ALL.

PRESTON'S PURIFYING PILLS.—The BLOOD MEDICINE. Sold in boxes at 7½*d.*, 1*s.* 1½*d.*, and 2*s.* 9*d.* Sent free on receipt of 8, 14, or 33 stamps.

This fine BLOOD Medicine is warranted not to contain a single particle of MERCURY, or any other Mineral, but to consist entirely of Medicinal Balsams PURELY VEGETABLE. One trial will convince anyone of their efficacy in all diseases of the Head, Chest, Heart, Lungs, Kidneys, Liver, Bowels, and likewise in Skin Diseases. These Pills create new, rich, and pure blood, and expel all impurities. They give IMMEDIATE relief, and very quickly cure, as a single box will prove.

They strengthen the constitution, improve the health, and greatly prolong life.

There is considerable saving in buying the larger boxes, as a 2*s.* 9*d.* box contains 100 pills.

As a family medicine they are greatly to be preferred, as they do not act upon the bowels, and are not in the slightest degree opening.

Prepared only by THOMAS PRESTON, M.B., at the City Medical Hall, 84, Long Lane, Smithfield, London.

*** The Government Stamp is on every box.

LUNG HEALER,

FOR DISEASES OF THE CHEST, THROAT, AND LUNGS.

PRESTON'S LUNG HEALER is a fine Balsamic Elixir which acts direct upon the Lungs, giving immediate relief, and eventually a permanent and lasting cure, even in cases where everything else has been tried and failed.

LUNG HEALER quickly cures Coughs, Colds, Asthma, Tightness or Wheezing at the Chest, difficulty of Breathing, Hoarseness, Phlegm, Tickling of the Throat, Shortness of Breath, Incipient Decline, Numbness and Weakness of the Lungs, Pains in the Chest, and Wasting Influenza, Hectic Fever, Night Sweats, Decay of the Lungs, Tubercular Disease, Expectoration, Palpitation, and all the symptoms of Impending Consumption.

LUNG HEALER strengthens the Lungs and thereby prevents Consumption. The Voice improves; Coughs and Colds are guarded against. It thoroughly eradicates hereditary consumptive taint if taken in time, and all who may be threatened with decline may rest in safety after a few doses of LUNG HEALER.

Sold in bottles at 2*s.* 9*d.* by THOMAS PRESTON, M.B., at the City Medical Hall, 84, Long Lane, Smithfield, London. The Government Stamp is on every bottle.

*** Order of any Chemist.

Owes its delicious flavour to the choice Caracas and other Cocoas with which it is manufactured.

COCOA

HOLLOWAY'S PILLS.—Hale Constitutions.

—The experience of years has shown that when the human frame has become debilitated from the effects of exposure, excess, or neglect, these Pills taken according to the directions will repair the mischief Holloway's Pills exercise the most wonderful tonic properties in all cases of nervous depression, whereby the vital powers are weakened, and the circulation is languid and unsteady. They improve the appetite, strengthen the digestion, regulate the liver, and act as gentle aperients. The Pills are suited to all ages and habits. A patient writes "Your Pills to be valued require only to be known. During many years I sought a remedy in vain, was daily becoming weaker, but when I heard of your Pills, and had recourse to them, they soon restored me"

THE ENTOMOLOGIST'S MONTHLY MAGAZINE,

Price Sixpence, monthly, 24 pages 8vo., with occasional Illustrations, Conducted by J. W. DOUGLAS, R. MCLACHLAN, F.L.S., E. C. RYE, and H. T. STAINTON, F.R.S., &c.

This Magazine, commenced in 1864, contains standard articles and notes on all subjects connected with Entomology, and especially on the Insects of the British Isles.

Subscription—Six Shillings per Volume, post-free The volumes commence with the June number in each year.

A PLEASANT MONTHLY PERIODICAL (commencing 1st July, 1874), on the Languages, Antiquities, Scenery, Races, Creeds, and Legends of all Countries; containing also copious Reviews of New Publications—British and Foreign—Translations in Prose and Verse, and *thoroughly practical* Lessons in European and Oriental Languages. Twenty-four quarto pages. Price Sixpence. Obtainable through all Booksellers and News-vendors in the United Kingdom, or direct from the Publishers, post-free, Sevenpence.

London: Thomas Cook and Son, Excursionists, Ludgate Circus, E.C., and 105, 106, and 107, Fleet Street, E.C.; Hodder and Stoughton, 27 and 31, Paternoster Row, E.C.

THE ZOOLOGIST:

A MONTHLY JOURNAL OF NATURAL HISTORY,

Conducted by EDWARD NEWMAN, F.L.S. F.Z.S. &c.

The Zoologist was established in 1843 to record and preserve observations on subjects similar to those treated of in White's "Natural History of Selborne," and the success which has attended it is sufficient proof that its plan is acceptable to "out-of-door naturalists," those who delight in observing the manners, habits, the private lives, the migrations, movements, nests, young and food of animals. It contains original papers and records of facts relating to Quadrupeds, Birds, Reptiles, Fishes, and Insects, together with notices of recent works on every branch of Natural History. The editor has been assisted by more than two hundred of our very best zoologists.

Published on the First of every Month.

PRICE ONE SHILLING.

London: JOHN VAN VOORST, 1, Paternoster Row.

JUDSON'S DYES.—18 Colours, 6d. each.

RIBBONS, WOOL, SILK, FEATHERS,

Completely dyed in 10 minutes without soiling the hands.

Full Instructions supplied. Of all Chemists and Stationers

JUDSON'S DYES.—Dyeing at Home.—JUDSON'S simple DYES are most useful and effectual. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES. Beautiful effects are thus produced in green, pink, brown, and many other colours.—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES.—Ferns, Grasses, Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c., by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed.

JUDSON'S DYES.—Ink—Ink—Ink.—A Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water.

JUDSON'S DYES.—For Colouring Architectural Plans, &c.—Much trouble may be saved in grinding up colours to a uniform tint. They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades.

JUDSON'S DYES.—For Staining Wood.—Diluted with Water. They sink deeply into the fibre, and will not rub off. They form the most economical stain on record. Light Brown for mahogany colour is excellent, No. 2 Black for walnut; Canary for satin; also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE,

Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

IMPORTANT CORRESPONDENCE.

THE REV. SIR EDWARD R. JODRELL, BART.,

To Messrs. FELTOE AND SONS, 26, Conduit Street, Bond Street, W.

When at Sall I received an Analytical Report of your "Specialité" Sherry, and you must forgive me for saying that at first I regarded the whole matter as a most egregious piece of humbug. Having, however, tasted the Wine in question, and found it most agreeable to the palate, I determined on my own responsibility to have it analysed *for myself*, having fully also determined previously to expose any hoax "pro bono publico," or to give you the benefit of the analysis, should it turn out in your favour. I have the pleasure to forward you Professor Redwood's (of the Pharmaceutical Society of Great Britain) Analysis, which says more than I can express. I am very particular as to the Wine I drink, and as I have been hitherto buying "every-day Sherry" at 60s a dozen, I am rejoiced to find *now* that I can purchase Wine of equal strength and superior bouquet at half that price. This should be known to the "General Public," and you can make any use you deem proper of this letter, and also of Professor Redwood's most elaborate analysis.

Yours faithfully,
(*Signed*) EDWARD REPPS JODRELL.

21, Portland Place, London, December 9th, 1873.

THE REV. SIR E. R. JODRELL.

SIR,—I have completed the Analysis of the sample of Sherry you left with me, and proceed to report the results. Judged by the palate it might be represented as a light, moderately dry Wine, with nothing to object to in its flavour or apparent strength. It is slightly acid to test-paper, and has a specific gravity of 986·8. These characters correspond with those of a sample of reputed good Montilla Sherry, the specific gravity of which was found to be 986·6, and the acidity almost identical with that of your sample.

I proceeded to make a more minute analysis, the results of which were as follows:—

Absolute Alcohol, by Volume	20·0 parts in 100
Free or unneutralised Acid, partly volatile and partly non-volatile	0·54 "
Volatile Acid (acetic acid)	0·1 "
Sugar and Extract	2·5 "
Ash, from incineration of Extract	0·45 "
MINERAL ACID, or inorganic matter, NOT YIELDED BY GRAPE-JUICE	NONE."

THESE RESULTS ARE ALL SATISFACTORY. The proportion of alcohol is that found in the best samples of Sherry; the volatile acid (acetic acid) is not more than is usually present, and the fixed acid is the TRUE ACID OF THE GRAPE, namely, tartaric acid. The ash is not more than it should be, and contains nothing foreign to the grape.

In preparing this Analysis, I have been enabled to observe that the alcohol, when separated from the other constituents of the wine, was PURE IN FLAVOUR AND OF GOOD QUALITY, and that there was NOTHING OBJECTIONABLE in the extract or other products that were separated in the process of analysation.

I am yours truly,
(*Signed*) T. REDWOOD, *Professor of Chemistry to the* PHARMACEUTICAL SOCIETY OF GREAT BRITAIN.

5th December, 1873.

ADOPTED AND RECOMMENDED BY NEARLY

TWO THOUSAND PHYSICIANS AND SURGEONS.

The recent Medical Correspondence in the "TIMES" demonstrates how injurious to health is "made-up Sherry," ALCOHOLISED to an UNREASONABLE extent.

MESSRS. FELTOE AND SONS,

With Assistant Lecturers in all the principal Departments.

The next SESSION will commence on the 6th of OCTOBER. Candidates for admission must not be under fourteen years of age, and those under sixteen will be required to pass a preliminary examination in English, Arithmetic, and the Elements of Latin.

Prospectuses of the several Departments of the Day Classes, the Evening Classes, and the Medical School, and of the Scholarships and Entrance Exhibitions tenable at the College, will be sent on application.

J. HOLME NICHOLSON, Registrar.

WESTMINSTER HOSPITAL MEDICAL SCHOOL.

(OPPOSITE WESTMINSTER ABBEY)

The SESSION 1874-75 will commence on THURSDAY, October 1st, with an INTRODUCTORY LECTURE by Dr. Potter The Address will be followed by the Distribution of the Prizes and a Conversazione in the Board Room

The new Physiological Laboratory will be completed by October 1st.

The Examinations for the Entrance Scholarships will be held on the 2nd and 3rd of October.

GEORGE COWELL, Dean.

UNIVERSITY OF LONDON.

MATRICULATION AND PRELIMINARY SCIENTIFIC EXAMINATIONS.

Special Classes for these Examinations are held at St. Bartholomew's Hospital. The Classes are not confined to Students of the Hospital.

A Class for the Matriculation Examination is held twice in each year, from October to January and from March to June

A Class for the Preliminary Scientific Examination is held from January to July.

For particulars, application may be made, personally or by letter, to the Warden of the College, St. Bartholomew's Hospital.

ANDERSON'S UNIVERSITY, GLASGOW.

The Trustees invite CANDIDATES for the CHAIR of CHEMISTRY vacant by the resignation of Professor Thorpe.

Applications to be lodged, on or before the 1st of September, with the Subscriber, who will furnish information regarding the duties and terms of the appointment.

J. B. KIDSTON, Secretary.

50, West Regent Street, Glasgow, 14th August, 1874.

MIDDLESEX HOSPITAL.

ENTRANCE SCHOLARSHIPS.

TWO SCHOLARSHIPS, of the annual value of £25 and £20 respectively, will be competed for on September 28th and following days. These Scholarships are open to all gentlemen who commence their medical studies in October 1874. Successful candidates will be required to become general students of the College.

For full particulars as to subjects of examination, &c, apply to the Dean.

ROBERT KING, B.A. M.B., Dean.

ST. BARTHOLOMEW'S HOSPITAL AND COLLEGE.

The WINTER SESSION will begin on THURSDAY, October 1.

The Clinical Practice of the Hospital comprises a service of 740 Beds, inclusive of 34 Beds for Convalescents at Highgate

Students can reside within the Hospital walls, subject to the College regulations.

For all particulars concerning either the Hospital or College, application may be made, personally or by letter, to the Resident Warden of the College

A Handbook will be forwarded on application.

UNIVERSITY COLLEGE, LONDON.

SESSION 1874-5.

The SESSION of the FACULTY of MEDICINE will commence on THURSDAY, October 1. Introductory Lecture at 3 p m , by Dr. F. T. Roberts B Sc.

The SESSION of the FACULTY of ARTS and LAWS (including the Department of the Fine Arts) will begin on Monday, October 5th. Introductory Lecture at 3 p m , by Professor G C Foster, F R.S Introductory Lecture for the Department of Fine Arts, the same day at 4 30 p m., by Professor E J. Poynter, A.R.A.

The SESSION of the FACULTY of SCIENCE (including the Department of the Applied Sciences) will begin on Monday, October 5.

The SCHOOL for BOYS between the ages of Seven and Sixteen will RE-OPEN on Tuesday, September 22

Prospectuses of the various Departments of the College, containing full information respecting Classes, Fees, Day and Hour of Attendance, &c , and copies of the Regulations relating to the Entrance and other Exhibitions, Scholarships, and Prizes open to competition by students of the several Faculties, may be obtained at the Office of the College.

The Examination for the Medical Entrance Exhibitions, and also that for the Andrews Entrance Prizes (Faculties of Arts and Laws, and of Science), will be held at the College on the 24th and 25th of September.

The College is close to the Gower Street Station of the Metropolitan Railway, and only a few minutes' walk from the Termini of the North Western, Midland, and Great Northern Railways.

JOHN ROBSON, B.A.

August 1874. Secretary to the Council.

UNIVERSITY COLLEGE, LONDON.

FACULTY OF SCIENCE.

The SESSION will begin on MONDAY, October 5th, 1874.

Pure Mathematics—Professor O. Henrici, Ph D. F.R S.
Applied Mathematics and Mechanics—Professor W K Clifford, M.A. F.R.S.
Physics—Professor G C Foster, B A. F R S.
Chemistry and Practical Chemistry—Professor Williamson, Ph D F R S.
Mineralogy and Geology—Professor Morris, F G S.
Engineering—Professor A. B W Kennedy, C E
Architecture and Construction—Professor T. Hayter Lewis, F.S.A. F I.B A.
Botany—Professor Oliver, F R S F L S.
Comparative Anatomy and Zoology—Professor Grant, M.D F.R S
Human Physiology (including Practical Physiology and Histology—Professor Burdon-Sanderson, M D F.R S.
Philosophy of Mind and Logic—Professor G. Croom Robertson, M.A.
Political Economy—Professor L. H Courtney, M A.

A Prospectus of the Faculty may be obtained at the Office of the College

The examination for the Andrews Entrance Prizes will be held at the College, on the 24th and 25th September.

The College is close to the Gower Street Station of the Metropolitan Railway.

OHN ROBSON, B.A.
Secretary to the Council.

ST. MARY'S HOSPITAL MEDICAL SCHOOL.

Opening of WINTER SESSION, October 1st, 1874. Introductory Address by Mr. EDMUND OWEN.

For further particulars apply to the Registrar at the Hospital, or to

A. B. SHEPHERD, M.B., Dean of the School.

ST. MARY'S HOSPITAL MEDICAL SCHOOL.

THREE OPEN SCHOLARSHIPS and TWO EXHIBITIONS, October 1874.

For particulars apply to the Dean, St. Mary's Hospital, Paddington, W.

NOTICE.—ROYAL SCHOOL of MINES,

Jermyn Street, London.—The 24th SESSION will begin on THURSDAY, the 1st October

Prospectuses may be had on application.

TRENHAM REEKS, Registrar.

KING'S COLLEGE, LONDON.

The THEOLOGICAL DEPARTMENT —New Students must present themselves on TUESDAY, September 29.

The College Theological Testamur can be obtained by

A. Graduates in Arts of any British University, in three terms.

B Associates of the General Literary Department of King's College, in six terms

C. All duly qualified persons of 21 years of age, in six terms.

Two Studentships of the value of £30 for two years will be adjudged by examination to those entering the College in October next.

There is also a Preparatory Class for those wishing to pass the Entrance Examinations.

For information, apply, personally or by post-card, to J. W. Cunningham, Esq , Secretary.

KING'S COLLEGE, LONDON.

DEPARTMENT of GENERAL LITERATURE and SCIENCE.—New Students will be admitted on WEDNESDAY, September 30.

The Department is thus divided :—

1. The Classical Division (embracing Classics, Mathematics, English History, and Modern Languages)

2. The Modern Division, which includes English, Latin, Modern Languages, Mathematics, Natural Philosophy, Chemistry, Geology, and Free-hand Drawing.

One Freake Exhibition of £20 will be given at the commencement of the Michaelmas Term to the Student passing the best examination on entering the College.

For information, apply, personally or by post-card, to J.W. Cunningham, Esq , Secretary.

KING'S COLLEGE, LONDON.

DEPARTMENT of ENGINEERING and APPLIED SCIENCES.—New Students will be admitted on WEDNESDAY, September 30.

The course of study provides practical education for young men who intend to engage in engineering, surveying, architecture, telegraphy, and the higher branches of chemical and manufacturing art.

This Department has attached to it a workshop, also chemical, physical, and photographic laboratories

One Freake and two College Exhibitions of £20, £30, and £21 respectively, will be given at the commencement of the Michaelmas Term to the Students passing the best examination on entering the College.

For information, apply, personally or by post-card, to J.W. Cunningham, Esq , Secretary.

KING'S COLLEGE, LONDON.

MEDICAL DEPARTMENT —The WINTER SESSION will OPEN on THURSDAY, October 1, with an Introductory Lecture by Dr. Ferrier.

Warneford Scholarships.—Students entering in October next will have the privilege of contending for two Scholarships of £25 each for three years

Five Medical Scholarships are awarded at the close of each winter session for proficiency in professional subjects, viz., one of £40 for two years, one of £30 for one year, and three of £20 for one year

For further information apply, personally or by post-card, to J. W. Cunningham, Esq , Secretary

---

KING'S COLLEGE, LONDON.

The EVENING CLASSES.—These Classes will RE-OPEN on MONDAY, October 5, in Divinity, Latin, Greek, French, German, Hebrew, Italian, Spanish, German Literature, English History, Geography, Arithmetic, Writing, Mathematics, Commerce, Drawing, Chemistry, Practical Chemistry, Mechanics, Physiology, Physics, Botany, Zoology, Logic, Political Economy, Mineralogy, Geology, Law, and Public Speaking.

For the prospectus, apply, personally or by post-card, to J.W. Cunningham, Esq , Secretary.

KING'S COLLEGE, LONDON.

The SCHOOL.—New Pupils will be admitted on TUESDAY, September 22. There are four divisions :—

1. Upper Classical School, intended to prepare Pupils for the Universities, for the theological, general literature, and medical departments of the College, and for the learned professions.

2. Upper Modern School, intended to prepare Pupils for general and mercantile pursuits, for the department of Engineering in the College, and for the Military Academies.

3 The Middle School comprises several Classes, each with its classical and modern division, for Pupils who are too old for the Lower, but not sufficiently advanced for the Upper School. Great attention is paid in this Division to arithmetic, writing, and bookkeeping, and to the subjects required for the Home Civil Service Examinations and those for mercantile appointments.

4. Lower School —This Division includes boys over eight years of age, and is intended to give a complete course of education up to such a point as will prepare them to enter with advantage either of the two senior divisions.

For information, apply, personally or by post-card, to J.W. Cunningham, Esq , Secretary

ROYAL COLLEGE of SCIENCE for IRELAND, STEPHEN'S GREEN, DUBLIN.

SCIENTIFIC AND TECHNICAL EDUCATION

This College supplies a complete course of instruction in Science, applicable to the Industrial Arts, especially those which may be classed broadly under the heads of CHEMICAL MANUFACTURES, MINING, ENGINEERING, and AGRICULTURE.

A Diploma of Associate of the College is granted at the end of the Three Years' Course

There are Four Royal Scholarships, of the value of £50 each yearly, with free education, including Laboratory instruction, tenable for two years Two became vacant each year. They are given to Students who have been a year in the College.

The Fees are £2 for each Course, or £10 for all the Courses of each year, with the exception of Laboratory

Chemistry (Theoretical and Practical), Metallurgy, &c.—Professor Robert Galloway, F C.S
Mathematics, Mechanics, and Mechanism—Professor Robert Ball, LL D, F R S
Drawing, Engineering, and Surveying—Professor Thomas F. Pigot, C.E. M R I.A
Experimental Physics—Professor W F. Barrett, F.R S E. F.C S.
Geology—Professor Edward Hull, M.A F.R S.
Mining and Mineralogy—Professor J. P O'Reilly, C E. M.R.I.A.
Agriculture—Professor Edmund W. Davy, M.D. M.R.I.A.
Botany—Professor W R. M'Nab, M D.
Zoology—Professor H. Alleyne Nicholson, M.D.

The Session commences on MONDAY, October 5th.

Programmes may be obtained on application to the Secretary, Royal College of Science, Stephen's Green, Dublin.

FREDERICK J. SIDNEY, LL.D, Secretary.

QUEENWOOD COLLEGE, near STOCKBRIDGE, HANTS.

Sound General Education for Boys.

Special attention to Science, particularly to Chemistry, both theoretical and practical

The Term commences TUESDAY, September 15

C. WILLMORE, Principal.

GRAMMAR SCHOOL, LEEDS.—Wanted, for September 15, a MATHEMATICAL and SCIENTIFIC MASTER. Non-resident. Salary, £200.—Applications, with Testimonials and References, to be addressed to the Rev. W G. Henderson, D.C.L., Head Master.

SUB-WEALDEN EXPLORATION

At Netherfield, near Battle.

The object of this work, commenced on the occasion of the meeting of the British Association at Brighton in 1872, is to ascertain the thickness of the Secondary Strata in the Wealden area, and the depth and nature of the underlying Palæozoic Formations.

The determination of the underground structure of the Wealden, is a point of great scientific interest, and one of *great national and economical importance*, as it may help to indicate the line taken underground by the coal measures of Belgium and Somerset

A sum of £3,000 has been collected by private subscription, and spent in this research, and a depth of 1,000 ft reached, but as yet without any positive result The beds traversed belong to the Lower Wealden, Purbeck and Portland series, Kimmeridge clay; and the boring has now reached the Oxford clay.

It is most desirable that the work should not be discontinued in the present stage for want of funds, and the Committee therefore make an earnest appeal for further assistance

Subscriptions may be sent to Henry Willett, Esq, Hon. Sec. and Treasurer, Arnold House, Brighton.

Signed, on behalf of the Committee,

ANDREW RAMSAY,
JOHN EVANS,
JOSEPH PRESTWICH.

NATURE.—Wanted clean Copies of Nos. 10, 13, and 116. Nature Office, 29, Bedford Street, Strand, W.C

ROYAL COUNCIL OF EDUCATION.— The Laboratory and Class-rooms of Berners College are open for Pupils EVERY DAY and EVENING The subjects of the above Examinations can be studied either Privately or in Classes. Fees moderate Analyses and investigations conducted—Apply to Prof. E. V. Gardner, F.E.S., F.S A., 44, Berners Street, W

SCIENCE TEACHING by CORRESPONDENCE. (See past advertisements) Only time for TWO MORE PUPILS Address H, care of Macmillan & Co., 29 and 30, Bedford Street, Strand, London, W.C.

PRIVATE TUITION.—A Gentleman of very great experience with backward and delicate boys, has VACANCIES for THREE PUPILS. Special attention given to the study of the Nature Sciences Terms reasonable—Address, F R A S, care of the Publisher of Nature, Bedford Street, Covent Garden, W C.

A LADY, who is an accomplished Linguist and Musician, and has a fair acquaintance with the Elements of Natural Science, desires a RE-ENGAGEMENT.—For further particulars, address T. D. P, 9, Elm Road, N.W.

A HIGH WRANGLER is anxious to obtain an APPOINTMENT as TUTOR or MATHEMATICAL MASTER in a good School—Address, T. L. K M, care of Messrs Macmillan & Co., 29 and 30, Bedford Street, Covent Garden, London, W C

A CAMBRIDGE B.A., First-class Natural Science Honours and Second-class Classical Honours, desires a TUTORSHIP Natural Science, French, Latin, Greek, Arithmetic. Good references.—A N. T, care of Editor of Nature, Bedford Street, Strand, W.C.

The SECOND MASTER of a High-class Grammar School receives a few Resident Pupils Special attention is given to the study of Natural Sciences—For further particulars apply by letter to "Tripos," care of the Publisher of Nature, 29, Bedford Street, Strand, London, W.C.

TO NATURALISTS and GEOLOGISTS. —The ORFORD CASTLE COLLECTION OF CRAG FOSSILS (See Advertisement in Nature of June 18th) For particulars of these Collections address Fredc. Collingwood, Esq, F.G S, 4, St Martin's Place, Trafalgar Square, superscribed "Orford Castle Fund"

July 8th.

London: Thomas Cook and Son, Excursionists, Ludgate Circus, E.C., and 105, 106, and 107, Fleet Street, E.C.; Hodder and Stoughton, 27 and 31, Paternoster Row, E.C.

NEWMAN'S ENTOMOLOGIST:

A MONTHLY ILLUSTRATED JOURNAL OF BRITISH INSECTS

Conducted by EDWARD NEWMAN, F.L.S. F.Z.S. &c.,
Late President of the Entomological Society.

The objects of the *Entomologist* are to give every information about Insects; more especially to work out the history of those which attack Fruit and Forest Trees, Vegetables, Root and Seed Crops, Greenhouse and Garden Plants, with a view to suggesting remedies. Notes, Observations, and Queries on every branch of the Science are solicited. To preserve a continuous record of the occurrence of rarities. To improve collections by offering a ready medium for the exchange of specimens.

Published on the First of every Month.

PRICE SIXPENCE.

SIMPKIN, MARSHALL, and Co., Stationers' Hall Court.

THE ZOOLOGIST:

A MONTHLY JOURNAL OF NATURAL HISTORY,

Conducted by EDWARD NEWMAN, F.L.S. F.Z.S. &c.

The Zoologist was established in 1843 to record and preserve observations on subjects similar to those treated of in White's "Natural History of Selborne," and the success which has attended it is sufficient proof that its plan is acceptable to "out-of-door naturalists;" those who delight in observing the manners, habits, the private lives, the migrations, movements, nests, young and food of animals. It contains original papers and records of facts relating to Quadrupeds, Birds, Reptiles, Fishes, and Insects, together with notices of recent works on every branch of Natural History. The editor has been assisted by more than two hundred of our very best zoologists.

Published on the First of every Month.

PRICE ONE SHILLING.

London: JOHN VAN VOORST, 1, Paternoster Row.

NEGRETTI & ZAMBRA'S

PATENT RECORDING THERMOMETER,

ADAPTED FOR ATMOSPHERIC AND DEEP-SEA TEMPERATURES.

THIS Thermometer differs from all other Registering or Recording Thermometers in the following important particulars :—

I.—The Thermometer contains only mercury, without any admixture of alcohol or other fluid.
II.—It has no indices or springs, and its indications are by the column of mercury.
III.—It can be carried in any position, and cannot possibly be put out of order, except by actual breakage of the instrument.

This new Recording Thermometer, in connection with a simple clock, will give the exact temperature of the air at any hour of the day or night, a most important addition to our Meteorological Instruments, especially to observers in many parts of the world who are engaged in taking simultaneous observations with our own at fixed Greenwich time.

The Thermometer arranged for deep-sea purposes will indicate and record the exact temperature, at any depth of the sea, irrespective of either warm or cold current or stratum through which the Thermometer may have to pass in its descent or ascent. This last qualification renders this Instrument vastly superior to the Thermometers now in use in the *Challenger* and other Deep-sea Expeditions ; for, *under certain conditions of temperature*, the old Thermometers on "Six's" principle have failed to give correct results. This we have on the authority of a Report to the Admiralty by Captain G. S. Nares, of H.M.S. *Challenger*, where, in speaking of temperature near the pack edge of the ice, he says :—

"*At a short distance from the pack the surface water rose to* 32°, *but at a depth of* 40 *fathoms we always found the temperature to be* 29° ; *this continued to* 300 *fathoms, the depth in which most of the icebergs float, after which there is a stratum of slightly warmer water of* 33° *or* 34°. *As the Thermometers had to pass through these two belts of water before reaching the bottom, the indices registered those temperatures, and it was impossible to obtain the exact temperature of the bottom whilst near the ice.*"

Illustrations and Prices of these Instruments upon application.

WHITE'S MOC-MAIN LEVER TRUSS

is allowed by upwards of 500 Medical Men to be the most effective invention in the curative treatment of Hernia. The use of a steel spring, so often hurtful in its effects, is here avoided ; a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, 2 inches below the hips, being sent to the manufacturer,

JOHN WHITE, 228, Piccadilly.

Price of a Single Truss, 16s., 21s., 26s. 6d., and 31s. 6d.
" Double " 31s. 6d., 42s., and 52s. 6d.
" Umbilical " 42s. and 52s. 6d.
Post-free.

ELASTIC STOCKINGS, KNEE-CAPS,

&c., for Varicose Veins and all cases of weakness and Swellings of the Legs, Sprains, &c. They are porous, light in texture, and inexpensive, and drawn on over an ordinary stocking. Price 4s. 6d., 7s. 6d., 10s., and 16s. each. Postage free.

JOHN WHITE, Manufacturer, 228, Piccadilly, London.

HOLLOWAY'S PILLS. — Indigestion,

Stomach and Liver Complaints.—Persons suffering from any disorders of the liver, stomach, or the organs of digestion, should have recourse to Holloway's Pills, as there is no medicine known that acts on these particular complaints with such certain success Its peculiar properties strengthen the stomach, increase the appetite, and rouse the sluggish liver. For bowel complaints it is invaluable, as it removes every primary derangement, thereby restoring the patient to the soundest health and strength. These preparations may be used at all times and in all climates by persons affected by biliousness, nausea, or disordered liver ; for flatulency and heartburn they are specifics. Indeed, no ailment of the digestive organs can long resist their purifying and corrective powers.

HEALTH FOR ALL.

PRESTON'S PURIFYING PILLS.—The BLOOD MEDICINE. Sold in boxes at 7½*d.*, 1*s.* 1½*d.*, and 2*s.* 9*d.* Sent free on receipt of 8, 14, or 33 stamps.

This fine BLOOD Medicine is warranted not to contain a single particle of MERCURY, or any other Mineral, but to consist entirely of Medicinal Balsams PURELY VEGETABLE. One trial will convince anyone of their efficacy in all diseases of the Head, Chest, Heart, Lungs, Kidneys, Liver, Bowels, and likewise in Skin Diseases. These Pills create new, rich, and pure blood, and expel all impurities. They give IMMEDIATE relief, and very quickly cure, as a single box will prove.

They strengthen the constitution, improve the health, and greatly prolong life.

There is considerable saving in buying the larger boxes, as a 2*s.* 9*d.* box contains 100 pills.

As a family medicine they are greatly to be preferred, as they do not act upon the bowels, and are not in the slightest degree opening.

Prepared only by THOMAS PRESTON, M.B., at the City Medical Hall, 84, Long Lane, Smithfield, London.

⁂ The Government Stamp is on every box.

LUNG HEALER,

FOR DISEASES OF THE CHEST, THROAT, AND LUNGS.

PRESTON'S LUNG HEALER is a fine Balsamic Elixir which acts direct upon the Lungs, giving immediate relief, and eventually a permanent and lasting cure, even in cases where everything else has been tried and failed.

LUNG HEALER quickly cures Coughs, Colds, Asthma, Tightness or Wheezing at the Chest, difficulty of Breathing, Hoarseness, Phlegm, Tickling of the Throat, Shortness of Breath, Incipient Decline, Numbness and Weakness of the Lungs, Pains in the Chest, and Wasting Influenza, Hectic Fever, Night Sweats, Decay of the Lungs, Tubercular Disease, Expectoration, Palpitation, and all the symptoms of Impending Consumption.

LUNG HEALER strengthens the Lungs and thereby prevents Consumption. The Voice improves; Coughs and Colds are guarded against. It thoroughly eradicates hereditary consumptive taint if taken in time, and all who may be threatened with decline may rest in safety after a few doses of LUNG HEALER.

Sold in bottles at 2*s.* 9*d.* by THOMAS PRESTON, M.B., at the City Medical Hall, 84, Long Lane, Smithfield, London. The Government Stamp is on every bottle.

⁂ Order of any Chemist.

ALGEBRA. For the Use of Colleges and Schools. Sixth Edition. Crown 8vo, cloth. 7*s.* 6*d.*

This work contains all the propositions which are usually included in elementary treatises on Algebra, and a large number of Examples for Exercise. The author has sought to render the work easily intelligible to students, without impairing the accuracy of the demonstrations, or contracting the limits of the subject. The Examples, about sixteen hundred and fifty in number, have been selected with a view to illustrate every part of the subject. The work will be found peculiarly adapted to the wants of students who are without the aid of a teacher. The Answers to the Examples, with hints for the solution of some in which assistance may be needed, are given at the end of the book. In the present edition two New Chapters and Three Hundred miscellaneous Examples have been added.

KEY to ALGEBRA for the USE of COLLEGES and SCHOOLS. Crown 8vo., 10s. 6d.

An ELEMENTARY TREATISE on the THEORY of EQUATIONS. Second Edition, revised. Crown 8vo, cloth, 7*s.* 6*d.*

This treatise contains all the propositions which are usually included in elementary treatises on the theory of Equations, together with Examples for exercise. These have been selected from the College and University Examination Papers, and the results have been given when it appeared necessary. In order to exhibit a comprehensive view of the subject, the treatise includes investigations which are not found in all the preceding elementary treatises, and also some investigations which are not to be found in any of them. For the second edition the work has been revised and some additions have been made, the most important being in account of the Researches of Prof. Sylvester respecting Newton's Rule.

PLANE TRIGONOMETRY. For Schools and Colleges. Fourth Edition. Crown 8vo, cloth, 5*s.*

The design of this work has been to render the subject intelligible to beginners, and at the same time to afford the student the opportunity of obtaining all the information which he will require on this branch of Mathematics. Each chapter is followed by a set of Examples; those which are entitled Miscellaneous Examples, together with a few in some of the other sets, may be advantageously reserved by the student for exercise after he has made some progress in the subject. In the Second Edition the hints for the solution of the Examples have been considerably increased.

A TREATISE on SPHERICAL TRIGONOMETRY. Third Edition, enlarged. Crown 8vo, cloth, 4*s.* 6*d.*

The present work is constructed on the same plan as the treatise on Plane Trigonometry, to which it is intended as a sequel In the account of Napier's Rules of circular parts, an explanation has been given of a method of proof devised by Napier, which seems to have been overlooked by most modern writers on the subject. Considerable labour has been bestowed on the text in order to render it comprehensive and accurate, and the Examples (selected chiefly from College Examination Papers) have all been carefully verified.

PLANE CO-ORDINATE GEOMETRY, as applied to the Straight Line and the Conic Sections. With numerous Examples. Fourth Edition, revised and enlarged. Crown 8vo, cloth, 7*s.* 6*d.*

The author has here endeavoured to exhibit the subject in a simple manner for the benefit of beginners, and at the same time to include in one volume all that students usually require. In addition, therefore, to the propositions which have always appeared in such treatises, he has introduced the methods of abridged notation, which are of more recent origin; these methods, which are of a less elementary character than the rest of the work, are placed in separate chapters, and may be omitted by the student at first.

A TREATISE on the DIFFERENTIAL CALCULUS. With numerous Examples. Sixth Edition. Crown 8vo, cloth, 10*s.* 6*d.*

The author has endeavoured in the present work to exhibit a comprehensive view of the Differential Calculus on the method of limits. In the more elementary portions he has entered into considerable detail in the explanations, with the hope that a reader who is without the assistance of a tutor may be enabled to acquire a competent acquaintance with the subject. The method adopted is that of Differential Coefficients. To the different chapters are appended Examples sufficiently numerous to render another book unnecessary; these Examples being mostly selected from College Examination Papers. This and the following work have been translated into Italian by Prof. Battaglini.

A TREATISE on the INTEGRAL CALCULUS and its APPLICATIONS. With numerous Examples. Fourth Edition, revised and enlarged. Crown 8vo, cloth, 10*s.* 6*d.*

This is designed as a work at once elementary and complete, adapted for the use of beginners, and sufficient for the wants of advanced students. In the selection of the propositions, and in the mode of establishing them, it has been sought to exhibit the principles clearly, and to illustrate all their most important results. The process of summation has been repeatedly brought forward, with the view of securing the attention of the student to the notions which form the true foundation of the Calculus itself, as well as of its most valuable applications. Every attempt has been made to explain those difficulties which usually perplex beginners, especially with reference to the *limits* of integrations. A new method has been adopted in regard to the transformation of multiple integrals. The last chapter deals with the Calculus of Variations. A large collection of Exercises, selected from College Examination Papers, has been appended to the several chapters.

EXAMPLES of ANALYTICAL GEOMETRY of THREE DIMENSIONS. Third Edition, revised. Crown 8vo, cloth, 4*s.*

MACMILLAN & CO., LONDON.

Bragg's Vegetable Charcoal
Sold by all Chemists
in Bottles 2/4/& 6/ each

BRAGG'S VEGETABLE CHARCOAL,
OR
PURE CARBON BISCUITS.
A NUTRITIOUS, PLEASANT, AND HEALTHFUL DIET,

Which has produced great benefit and positive relief to thousands of sufferers from Indigestion, Bile, Acidity, Foul Breath, Dyspepsia, Heartburn, Worms, &c., at this season of the year; is now strongly recommended as a relief, if not a preventative, of Diarrhoea and other Choleraic Disorders. There is medical testimony to its beneficial effects in those complaints.

Sold in Tins, 1s., 2s., 4s., and 8s. each, by all Chemists, and by the Manufacturer,
J. L. BRAGG, 14 (late 2), Wigmore Street, Cavendish Square.

Now Ready. Price One Shilling.

ART
PICTORIAL AND INDUSTRIAL: A REVIEW.
FOR AUGUST 1874.
WITH CHOICE EXAMPLES FROM VARIOUS SOURCES,
REPRODUCED BY THE HELIOTYPE AND OTHER PERMANENT PROCESSES.
Edited by JOHN FORBES-ROBERTSON.
"ARS ARTIS CAUSÂ, ITAQUE HOMINIS."

CONTENTS OF AUGUST NUMBER—Our Illustrations:—1. "Henry Fawcett, Esq., M.P., and Mrs. Fawcett," by Ford Madox-Brown. 2. "The Knight in Armour," by Wm. Cave Thomas. 3. "Lesson in Network," by J. F. Millet.—The Exhibitions: The Royal Academy, the Munich Gallery.—The Decoration of St. Paul's Cathedral, No. 2.—Art Notes and Gossip.—Reviews.

SPECIAL NOTICE.—The Publishers take the present opportunity of informing the Readers of "Art" that fresh arrangements have been entered into for the reproduction in the forthcoming Numbers of choice examples of Painting, Engraving, Sculpture, Pottery, and Art objects generally. These will be representative both of British and Continental Schools.

N.B.—Artists and those connected with Artistic manufacture wishing their works to be reproduced in the pages of "Art," are requested to communicate with the Editor, through the Publishers.

ACHROMATIC MICROSCOPES,
and all kinds of Scientific Instruments.

Pillischer's
St. Thomas's Hospital
Microscope,
As supplied to the principal Universities and Hospitals
Monocular, £5; Binocular, £10 10s.

PILLISCHER'S New Series of Correction and Immersion Object-glasses, from $\frac{1}{4}$ to $\frac{1}{16}$ inch, unequalled for their brilliant Defining and Penetrating Power

PILLISCHER'S Improved CLINICAL THERMOMETERS, in Sterling Silver Cases, 3½ in., 14s.; 4½ in., 17s.; 6 in., in Wooden Case, 10s., including a Kew Certificate

ILLUSTRATED DESCRIPTIVE CATALOGUE MAY BE HAD ON APPLICATION TO
88, New Bond Street, W., London.

NOTICE.—To Science Classes.—MOTTERSHEAD AND CO., LABORATORY FURNISHERS, EXCHANGE STREET, MANCHESTER, supply all the Apparatus enumerated in the SOUTH KENSINGTON LISTS FOR THE USE OF TEACHERS OF PHYSICAL SCIENCE (Light, Heat, Electricity, Magnetism, &c.), and will be happy to show intending purchasers specimens of the various Instruments, or to forward Estimates on application. Orders exceeding £2 in value delivered free to any railway station in England.

JUDSON'S DYES.—18 Colours, 6d. each.
RIBBONS, WOOL, SILK, FEATHERS,
Completely dyed in 10 minutes without soiling the hands.
Full Instructions supplied. Of all Chemists and Stationers.

JUDSON'S DYES.—Dyeing at Home.—JUDSON'S simple DYES are most useful and effectual. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES. Beautiful effects are thus produced in green, pink, brown, and many other colours.—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES.—Ferns, Grasses, Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c., by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed.

JUDSON'S DYES.—Ink—Ink—Ink.—A Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water.

JUDSON'S DYES.—For Colouring Architectural Plans, &c.—Much trouble may be saved in grinding up colours to a uniform tint. They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades.

JUDSON'S DYES.—For Staining Wood.—Diluted with Water. They sink deeply into the fibre, and will not rub off. They form the most economical stain on record. Light Brown for mahogany colour is excellent; No. 2 Black for walnut; Canary for satin; also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE,

Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

MACMILLAN & CO.'S

GOLDEN TREASURY SERIES.

Uniformly Printed in 18mo., with Vignette Titles by Sir NOEL PATON, T. WOOLNER, W. HOLMAN HUNT, J. E MILLAIS, ARTHUR HUGHES, &c. Engraved on Steel by JEENS. Bound in extra cloth, 4*s*. 6*d*. each volume. Also kept in morocco and calf bindings.

"*Messrs. Macmillan have, in their Golden Treasury Series, especially provided editions of standard works, volumes of selected poetry, and original compositions, which entitle this series to be called classical. Nothing can be better than the literary execution, nothing more elegant than the material workmanship.*"—British Quarterly Review.

The Golden Treasury of the Best Songs and Lyrical Poems in the English Language. Selected and arranged, with Notes, by FRANCIS TURNER PALGRAVE.

"*This delightful little volume, the Golden Treasury, which contains many of the best original lyric pieces and songs in our language, grouped with care and skill, so as to illustrate each other like the pictures in a well-arranged gallery.*"—Quarterly Review.

The Children's Garland from the best Poets. Selected and arranged by Coventry Patmore.

"*It includes specimens of all the great masters in the art of poetry, selected with the matured judgment of a man concentrated on obtaining insight into the feelings and tastes of childhood, and desirous to awaken its finest impulses, to cultivate its keenest sensibilities.*"—Morning Post.

The Book of Praise. From the best English Hymn Writers. Selected and arranged by Sir ROUNDELL PALMER. A New and Enlarged Edition.

The Fairy Book; the best Popular Fairy Stories. Selected and rendered anew by the Author of "John Halifax, Gentleman."

"*A delightful selection, in a delightful external form; full of the physical splendour and vast opulence of proper fairy tales.*"—Spectator.

The Ballad Book. A Selection of the Choicest British Ballads. Edited by William ALLINGHAM.

"*His taste as a judge of old poetry will be found, by all acquainted with the various readings of old English ballads, true enough to justify his undertaking so critical a task.*"—Saturday Review.

The Jest Book. The Choicest Anecdotes and Sayings. Selected and arranged by Mark LEMON.

"*The fullest and best jest book that has yet appeared.*"—Saturday Review.

Bacon's Essays and Colours of Good and Evil. With Notes and Glossarial Index. By W. ALDIS WRIGHT, M.A.

The Pilgrim's Progress from this World to that which is to come. By John Bunyan.

"*A beautiful and scholarly print.*"—Spectator.

The Sunday Book of Poetry for the Young. Selected and arranged by C. F. Alexander.

"*A well-selected volume of sacred poetry.*"—Spectator.

A Book of Golden Deeds of all Times and all Countries. Gathered and narrated anew. By the Author of "The Heir of Redclyffe."

The Poetical Works of Robert Burns. Edited, with Biographical Memoir, Notes, and Glossary, by Alexander Smith. Two vols.

The Adventures of Robinson Crusoe. Edited from the Original Edition by J. W. Clark, M.A., Fellow of Trinity College, Cambridge.

The Republic of Plato. Translated into English, with Notes by J. Ll. Davies, M.A., and D. J. VAUGHAN, M.A.

The Song Book. Words and Tunes from the best Poets and Musicians. Selected and arranged by John Hullah, Professor of Vocal Music in King's College, London.

La Lyre Francaise. Selected and arranged, with Notes, by Gustave Masson, French Master in Harrow School.

Tom Brown's School Days. By An Old Boy.

A Book of Worthies. Gathered from the Old Histories and written anew by the Author of "The Heir of Redclyffe."

MACMILLAN & CO., LONDON.

ROYAL SCHOOL OF MINES.

DEPARTMENT OF SCIENCE AND ART.

During the Twenty fourth Session, 1874–75, which will commence on the 1st of October, the following COURSES of LECTURES and PRACTICAL DEMONSTRATIONS will be given:—

1. Chemistry By E Frankland, Ph D F R.S.
2. Metallurgy. By John Percy, M D F R S
3. Natural History. By T. H Huxley, LL.D. F.R.S
4. Mineralogy. } By Warington W. Smith, M A. F.R S,
5. Mining. } *Chairman*
6. Geology By A. C Ramsay, LL.D. F R S.
7. Applied Mechanics By T M Goodeve, M.A.
8. Physics By Frederick Guthrie, Ph D F R.S.
9. Mechanical Drawing. By Rev. J. H. Edgar, M.A.

The Fee for Students desirous of becoming Associates is £30 in one sum, on entrance, or two annual payments of £20, exclusive of the Laboratories

Tickets to separate Courses of Lectures are issued at £3 and £4 each.

Officers in the Queen's Service, Her Majesty's Consuls, Acting Mining Agents, and Managers, may obtain Tickets at reduced prices.

Science Teachers are also admitted to the Lectures at reduced fees.

For a Prospectus and information apply to the Registrar, Royal School of Mines, Jermyn Street, London, S.W.

TRENHAM REEKS, Registrar.

NOTE —By order of the Lords of the Committee of Council on Education, the instruction in Chemistry, Physics, Applied Mechanics, and Natural History will be given in the New Buildings in the Exhibition Road, South Kensington

ST. MARY'S HOSPITAL MEDICAL SCHOOL.

Opening of WINTER SESSION, October 1st, 1874. Introductory Address by Mr. EDMUND OWEN

For further particulars apply to the Registrar at the Hospital, or to

A. B. SHEPHERD, M B, Dean of the School.

ST. MARY'S HOSPITAL MEDICAL SCHOOL.

THREE OPEN SCHOLARSHIPS and TWO EXHIBITIONS, October 1874.

For particulars apply to the Dean, St. Mary's Hospital, Paddington, W.

ST. BARTHOLOMEW'S HOSPITAL AND COLLEGE.

SCHOLARSHIPS IN SCIENCE.

Two Scholarships in Science have been founded at St Bartholomew's Hospital:—

1. An Open Scholarship of the value of £100, tenable for one year, to be competed for in September The subjects of examination are Physics, Chemistry, Botany, and Zoology. The successful candidate will be required to enter at St. Bartholomew's Hospital in October next.

2. Preliminary Scientific Scholarship of the value of £50, tenable for one year, to be competed for in October next by Students of the Hospital of less than six months' standing The subjects of examination are identical with those of the Open Scholarship.

For further particulars and syllabus of subjects, application may be made personally or by letter to the Warden of the College, St. Bartholomew's Hospital.

WESTMINSTER HOSPITAL MEDICAL SCHOOL.

(OPPOSITE WESTMINSTER ABBEY)

The SESSION 1874-75 will commence on THURSDAY, October 1st, with an INTRODUCTORY LECTURE by Dr POTTER The Address will be followed by the Distribution of the Prizes and a Conversazione in the Board Room.

The new Physiological Laboratory will be completed by October 1st.

The Examinations for the Entrance Scholarships will be held on the 2nd and 3rd of October.

GEORGE COWELL, Dean

QUEENWOOD COLLEGE, near STOCKBRIDGE, HANTS.

Sound General Education for Boys.

Special attention to Science, particularly to Chemistry, both theoretical and practical.

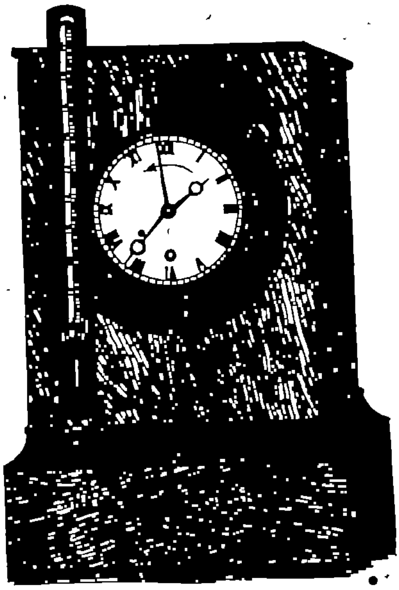
HOLLOWAY'S PILLS and OINTMENT.—DELICATE HEALTH—In debility, languor, and nervousness, generated by excess of any kind, whether mental or physical, the effect of these pills is in the highest degree bracing, renovating, and restorative. They drive from the system the morbid cause of disease, whether its origin be evident or its situation undiscoverable, they re-establish the digestion, regulate all the secretions, quiet the nervous system, raise the patients' spirits, and bring back the frame to its pristine health and vigour. Holloway's pills increase the appetite, while they secure perfect digestion to all ordinary food, and release the invalid from restraint in diet. In a word, whatever the cause of decline, the pills place the patient in the position most favourable to recovery



NEGRETTI & ZAMBRA'S

PATENT RECORDING THERMOMETER,

ADAPTED FOR ATMOSPHERIC AND DEEP-SEA TEMPERATURES.

THIS Thermometer differs from all other Registering or Recording Thermometers in the following important particulars :—

I.—The Thermometer contains only mercury, without any admixture of alcohol or other fluid.

II.—It has no indices or springs, and its indications are by the column of mercury.

III.—It can be carried in any position, and cannot possibly be put out of order, except by actual breakage of the instrument.

This new Recording Thermometer, in connection with a simple clock, will give the exact temperature of the air at any hour of the day or night, a most important addition to our Meteorological Instruments, especially to observers in many parts of the world who are engaged in taking simultaneous observations with our own at fixed Greenwich time.

The Thermometer arranged or deep-sea purposes will indicate and record the exact temperature, at any depth of the sea, irrespective of either warm or cold current or stratum through which the Thermometer may have to pass in its descent or ascent. This last qualification renders this Instrument vastly superior to the Thermometers now in use in the *Challenger* and other Deep-sea Expeditions ; for, *under certain conditions of temperature*, the old Thermometers on "Six's" principle have failed to give correct results. This we have on the authority of a Report to the Admiralty by Captain G. S. Nares, of H.M.S. *Challenger*, where, in speaking of temperature near the pack edge of the ice, he says :—

"At a short distance from the pack the surface water rose to 32°, but at a depth of 40 fathoms we always found the temperature to be 29° ; this continued to 300 fathoms, the depth in which most of the icebergs float, after which there is a stratum of slightly warmer water of 33° or 34°. As the Thermometers had to pass through these two belts of water before reaching the bottom, the indices registered those temperatures, and it was impossible to obtain the exact temperature of the bottom whilst near the ice."

Illustrations and Prices of these Instruments upon application.

A NUTRITIOUS, PLEASANT, AND HEALTHFUL DIET,

Which has produced great benefit and positive relief to thousands of sufferers from Indigestion, Bile, Acidity, Foul Breath, Dyspepsia, Heartburn, Worms, &c, at this season of the year, is now strongly recommended as a relief, if not a preventative, of Diarrhœa and other Choleraic Disorders There is medical testimony to its beneficial effects in those complaints.

Sold in Tins, 1s., 2s, 4s., and 8s each, by all Chemists, and by the Manufacturer,

J. L. BRAGG, 14 (late 2), Wigmore Street, Cavendish Square.

JUDSON'S DYES.—18 Colours, 6d. each.

RIBBONS, WOOL, SILK, FEATHERS,

Completely dyed in 10 minutes without soiling the hands.

Full Instructions supplied. Of all Chemists and Stationers.

JUDSON'S DYES.—Dyeing at Home.—

JUDSON'S simple DYES are most useful and effectual. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper

Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES Beautiful effects are thus produced in green, pink, brown, and many other colours—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES.—Ferns, Grasses,

Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c., by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed.

JUDSON'S DYES.—Ink—Ink—Ink.—A

Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water.

JUDSON'S DYES.—For Colouring Architectural Plans, &c.

—Much trouble may be saved in grinding up colours to a uniform tint They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades.

JUDSON'S DYES.—For Staining Wood.—

Diluted with Water. They sink deeply into the fibre, and will not rub off They form the most economical stain on record. Light Brown for mahogany colour is excellent; No. 2 Black for walnut; Canary for satin; also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE,

Of Chemists and Oilmen in London, Chemists and Stationers in the Country

GEOLOGICAL ASSOCIATION, at 8.—On the Construction of Geological Maps: L. C. Miall.

NEWMAN'S ENTOMOLOGIST:

A MONTHLY ILLUSTRATED JOURNAL OF BRITISH INSECTS

Conducted by EDWARD NEWMAN, F.L.S. F.Z.S. &c.,

Late President of the Entomological Society.

The objects of the *Entomologist* are to give every information about Insects; more especially to work out the history of those which attack Fruit and Forest Trees, Vegetables, Root and Seed Crops, Greenhouse and Garden Plants, with a view to suggesting remedies. Notes, Observations, and Queries on every branch of the Science are solicited. To preserve a continuous record of the occurrence of rarities. To improve collections by offering a ready medium for the exchange of specimens.

Published on the First of every Month.

PRICE SIXPENCE.

SIMPKIN, MARSHALL, and Co., Stationers' Hall Court.

THE ZOOLOGIST:

A MONTHLY JOURNAL OF NATURAL HISTORY,

Conducted by EDWARD NEWMAN, F.L.S. F.Z.S. &c

The Zoologist was established in 1843 to record and preserve observations on subjects similar to those treated of in White's "Natural History of Selborne," and the success which has attended it is sufficient proof that its plan is acceptable to "out-of-door naturalists;" those who delight in observing the manners, habits, the private lives, the migrations, movements, nests, young and food of animals. It contains original papers and records of facts relating to Quadrupeds, Birds, Reptiles, Fishes, and Insects, together with notices of recent works on every branch of Natural History. The editor has been assisted by more than two hundred of our very best zoologists.

Published on the First of every Month.

PRICE ONE SHILLING.

London: JOHN VAN VOORST, 1, Paternoster Row.

HEALTH FOR ALL.

PRESTON'S PURIFYING PILLS.—The BLOOD MEDICINE. Sold in boxes at 7½d., 1s. 1½d., and 2s. 9d. Sent free on receipt of 8, 14, or 33 stamps.

This fine BLOOD Medicine is warranted not to contain a single particle of MERCURY, or any other Mineral, but to consist entirely of Medicinal Balsams PURELY VEGETABLE. One trial will convince anyone of their efficacy in all diseases of the Head, Chest, Heart, Lungs, Kidneys, Liver, Bowels, and likewise in Skin Diseases. These Pills create new, rich, and pure blood, and expel all impurities. They give IMMEDIATE relief, and very quickly cure, as a single box will prove.

They strengthen the constitution, improve the health, and greatly prolong life.

There is considerable saving in buying the larger boxes, as a 2s. 9d. box contains 100 pills.

As a family medicine they are greatly to be preferred, as they do not act upon the bowels, and are not in the slightest degree opening.

Prepared only by THOMAS PRESTON, M.B., at the City Medical Hall, 84, Long Lane, Smithfield, London.

*** The Government Stamp is on every box.

LUNG HEALER,

FOR DISEASES OF THE CHEST, THROAT, AND LUNGS.

PRESTON'S LUNG HEALER is a fine Balsamic Elixir which acts direct upon the Lungs, giving immediate relief, and eventually a permanent and lasting cure, even in cases where everything else has been tried and failed.

LUNG HEALER quickly cures Coughs, Colds, Asthma, Tightness or Wheezing at the Chest, difficulty of Breathing, Hoarseness, Phlegm, Tickling of the Throat, Shortness of Breath, Incipient Decline, Numbness and Weakness of the Lungs, Pains in the Chest, and Wasting Influenza, Hectic Fever, Night Sweats, Decay of the Lungs, Tubercular Disease, Expectoration, Palpitation, and all the symptoms of Impending Consumption.

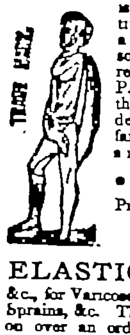
LUNG HEALER strengthens the Lungs and thereby prevents Consumption. The Voice improves; Coughs and Colds are guarded against. It thoroughly eradicates hereditary consumptive taint if taken in time, and all who may be threatened with decline may rest in safety after a few doses of LUNG HEALER.

Sold in bottles at 2s. 9d. by THOMAS PRESTON, M.B., at the City Medical Hall, 84, Long Lane, Smithfield, London. The Government Stamp is on every bottle.

*** Order of any Chemist.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS



is allowed by upwards of 500 Medical Men to be the most effective invention in the curative treatment of Hernia. The use of a steel spring, so often hurtful in its effects, is here avoided; a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, 2 inches below the hips, being sent to the manufacturer,

JOHN WHITE, 228, Piccadilly.

Price of a Single Truss, 16s., 21s., 26s. 6d., and 31s. 6d.
" Double " 31s. 6d., 42s., and 52s. 6d.
" Umbilical " 42s. and 52s. 6d.
Post-free.

ELASTIC STOCKINGS, KNEE-CAPS,

&c., for Varicose Veins and all cases of weakness and Swellings of the Legs, Sprains, &c. They are porous, light in texture, and inexpensive, and drawn on over an ordinary stocking. Price 4s. 6d., 7s. 6d., 10s., and 16s. each. Postage free.

JOHN WHITE, Manufacturer, 228, Piccadilly, London.

FOR MICROSCOPE DRAWING

THE

NEUTRAL TINT CAMERA

Is the easiest and best, and can be fitted to any Microscope Eye-piece by sending Cap for size per post. Price 7s. 6d. Post Orders payable at Great Portland Street.

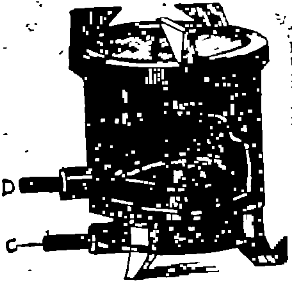
ESTABLISHED 100 YEARS.

An Illustrated Descriptive Catalogue of Spectroscopes, 18 Stamps.

1871.—FIRST-CLASS BRONZE MEDAL, Royal Cornwall Polytechnic Society. 1872.—SILVER MEDAL. 1873.—INTERNATIONAL EXHIBITION, PRIZE MEDAL.

FLETCHER'S
NEW LOW TEMPERATURE BURNER (PATENT)



This Burner gives a range of heating power from a gentle current of WARM air to a BRIGHT RED HEAT, and is so perfectly under control that a common glass bottle may be placed on the tripod without protection and heated to any required temperature without the slightest risk of fracture. In practical use it dispenses with the necessity for drying-closets, sand-and-water baths, &c.

For very low temperatures the ring must be lighted through the opening B; this causes a current of warm air to rise through the gauze above. For higher temperatures the light must be applied on the surface of the gauze A, which will give a large body of clear blue flame. A special pattern is made with a blast tube, by which the flame on the surface can be concentrated and urged until it gives almost a clear white heat, the temperature depending on the air supplied through the blast tube.

Price, without blast tube — — — — — 7s. 6d.
" with blast tube for high temperatures — 9s. 0d.

UNIVERSAL FURNACE (GAS),

For High Temperatures (without blast) for Crucibles, Muffles, &c, in several sizes and patterns. Special designs made to order.

NEW BUNSEN BURNERS, giving a range of temperature up to a clear white heat, 10s 6d.

HOT BLAST BLOWPIPES, giving temperatures exceeding the fusing-point of platinum, 11s 6d, 13s., 15s.

POWERFUL FOOT-BLOWERS, 18s.

THE MIDDLESEX HOSPITAL COLLEGE.

The WINTER SESSION, 1874-5, will open on OCTOBER 1st, with an INTRODUCTORY ADDRESS at 3 o'clock, by Mr. ANDREW CLARK, F.R.C.S

The Medical College attached to the Hospital provides the most complete means for the education of Students

The College Tutors superintend and assist all general students in their studies, especially those who are preparing for Examinations, without extra fee, and thus the necessity for obtaining private instruction is obviated

General Fee for the Curriculum required by the Royal Colleges of Physicians and Surgeons, and the Society of Apothecaries, £90, which may be paid by instalments.

For full particulars as to Entrance and other Scholarships, Clinical Appointments, Residence of Students, &c , apply to the Dean.

ROBERT KING, B.A. M.B , Dean.

UNIVERSITY OF LONDON.

MATRICULATION AND PRELIMINARY SCIENTIFIC EXAMINATIONS.

Special Classes for these Examinations are held at St. Bartholomew's Hospital. The Classes are not confined to Students of the Hospital

A Class for the Matriculation Examination is held twice in each year, from October to January, and from March to June.

A Class for the Preliminary Scientific Examination is held from January to July

For particulars, application may be made, personally or by letter, to the Warden of the College, St Bartholomew's Hospital.

QUEENWOOD COLLEGE, near STOCKBRIDGE, HANTS.

Sound General Education for Boys.

Special attention to Science, particularly to Chemistry, both theoretical and practical

References to Dr. Debus, F.R.S ; Dr Frankland, F.R S. ; Dr. Roscoe, F.R S. ; Dr Angus Smith, F.R S ; Dr. Tyndall, F.R S. ; Dr Voelcker, F R S. , Dr. Williamson, F R S.

The Term commences TUESDAY, September 15.

C. WILLMORE, Principal.

ST. BARTHOLOMEW'S HOSPITAL AND COLLEGE.

The WINTER SESSION will begin on THURSDAY, October 1

The Clinical Practice of the Hospital comprises a service of 740 Beds, inclusive of 34 Beds for Convalescents at Highgate.

Students can reside within the Hospital walls, subject to the College regulations.

For all particulars concerning either the Hospital or College, application may be made, personally or by letter, to the Resident Warden of the College

A Handbook will be forwarded on application

LECTURE ON THE SUN,

By Mr. RICHARD DART,

ILLUSTRATED BY

Models, Diagrams, and Chemical Experiments.

SYLLABUS.

Introduction—The Nature of Fire—Spectrum Analysis—The Spectroscope—The Practical Application of the Spectroscope—Its Application to the Sun—Evidence afforded by Spectrum Analysis that the Sun is Fire—The Sun's Spots—Selective Absorption—The Sun's Motion—Spherical Form—Magnitude—Conclusion.

Terms: London, Three Guineas, Country, Five Guineas

Address:—12, BEDFORD STREET, STRAND, LONDON.

ST. MARY'S HOSPITAL MEDICAL SCHOOL.

Opening of WINTER SESSION, October 1st, 1874. Introductory Address by Mr EDMUND OWEN

For further particulars apply to the Registrar at the Hospital, or to

A. B SHEPHERD, M B , Dean of the School

ST. MARY'S HOSPITAL MEDICAL SCHOOL.

THREE OPEN SCHOLARSHIPS and TWO EXHIBITIONS, October 1874.

For particulars apply to the Dean, St. Mary's Hospital, Paddington, W.

NOTICE.—ROYAL SCHOOL of MINES,

Jermyn Street, London.—The 24th SESSION will begin on THURSDAY, the 1st October

Prospectuses may be had on application

TRENHAM REEKS, Registrar.

EVENING SCIENCE LECTURES.—Mr.

W J W. WILSON, F.C S. F P S (Demonstrator of Practical Physics at South Kensington), will commence the following Courses of Lectures in the Theatre of the Birkbeck Institution, Southampton Buildings, W.C , on October 1st and 2nd .—

Acoustics, Light, and Heat, 30 Lectures, on Thursdays, at 8 p m
Electricity and Magnetism, 30 Lectures, on Fridays, at 8 p m.

Fee for one Course, 5s ; for the two, 7s 6d For detailed Syllabus, particulars of Special Prizes, &c , apply to the Librarian.

At the Class Examinations of the Science and Art Department, May 1874, 130 Papers in Physics were worked by Mr Wilson's Pupils Of these, 87 passed First Class and obtained Queen's Prizes , 41 passed Second Class , and two failed. In 1873, 68 Papers worked . 45 First Class, 23 Second Class, and *none failed*

ROYAL COUNCIL OF EDUCATION.—The Laboratory and Class-rooms of Berners College are open for Pupils EVERY DAY and EVENING. The subjects of the above Examinations can be studied either Privately or in Classes. Fees moderate Analyses and investigations conducted.—Apply to Prof E. V. GARDNER, F R.S., F.S.A., 44, Berners Street, W

EVENING SCIENCE LECTURES.—PHYSICAL GEOGRAPHY AND GEOLOGY.—Mr. H FISHER, F G.S, will deliver, at the Birkbeck Institution, Southampton Buildings, Chancery Lane, a Course of Thirty Lectures on each of the above subjects, on THURSDAY EVENINGS at 7 and 8 o'clock respectively, commencing October 1st. Fee for the Two Courses, 7s. 6d.; a Single Course, 5s —For further particulars apply to Secretary.

A BARGAIN.—For Sale, a Solid TELESCOPIC SPECULUM. Never used. Cost £31. No reasonable offer refused.—Apply to J. DREW APPLEBY, 10, Park Road, Newcastle-on-Tyne.

PRELIMINARY EXAMINATIONS of the COLLEGE of SURGEONS and APOTHECARIES' HALL.—Mr. J. ERLE BENHAM (formerly of King's College, London, author of several works), who has compiled, expressly for his own Pupils, Guides to the above, containing upwards of 400 questions and answers on all the subjects of examination, has CLASSES READING at his residence at Hampstead (where he receives a few resident Pupils) and in the Temple, for these Examinations. For references to Noblemen, Members of Parliament, Doctors of eminence, Queen's Counsel, &c., address to 3, Pump Court, Temple, or to the care of Messrs. Butterworth, 7, Fleet Street, her Majesty's Publishers.

MINERALS and ROCKS, Classified after Miller, Dana, and Rose. 100 Examples, 25s., 200 ditto, £2 10s to £3 10s.; 300 ditto, £4 10s. to £6, 400 ditto, £6 to £8, 500 ditto, £8 8s. to £10 10s. Including Half Fossils, 250 Examples, £3 10s. 6d.; 400 ditto, £6. 150 FOSSILS illustrating Morris's Chart or Lyell's Manual, 30s: 250 ditto (mostly of the species figured), £3; 350 ditto, £5 to £6 RECENT SHELLS: 100 genera, £1; 200 ditto, £2 10s.

ALFRED BELL, 5, Grafton Street, Fitzroy Square, London.

TO NATURALISTS and GEOLOGISTS.—The ORFORD CASTLE COLLECTION OF CRAG FOSSILS (See Advertisement in NATURE of June 18th) For particulars of these Collections address Fredc. Collingwood, Esq, F.G S., 4, St Martin's Place, Trafalgar Square, superscribed "ORFORD CASTLE FUND."

July 8th.

A LADY, thoroughly experienced, her tastes literary, desires a RE-ENGAGEMENT as COMPANION or AMANUENSIS Possesses knowledge of Housekeeping. No objection to travel. Excellent references.—M.B., 13, Bishopsgate Street Without, E.C.

The SECOND MASTER of a High-class Grammar School receives a few Resident Pupils Special attention is given to the study of Natural Sciences.—For further particulars apply by letter to "Tripos," care of the Publisher of NATURE, 29, Bedford Street, Strand, London, W.C.

NOTICE.—To Science Classes.—MOTTERSHEAD AND CO, LABORATORY FURNISHERS, EXCHANGE STREET, MANCHESTER, supply all the Apparatus enumerated in the SOUTH KENSINGTON LISTS FOR THE USE OF TEACHERS OF CHEMICAL OR PHYSICAL SCIENCE (including Light, Heat, Electricity, Magnetism, &c.), and will be happy to show intending purchasers specimens of the various Instruments, or to forward Estimates on application. Orders exceeding £2 in value delivered free to any railway station in England.

GEOLOGY.—ELEMENTARY COLLECTIONS to Illustrate the New Edition of "Lyell's Students' Elements of Geology," and facilitate the important study of this science, can be had at 2, 5, 10, 20, 50, to 1,000 guineas. Also, Single Specimens of Rocks, Minerals, Fossils, and Recent Shells Geological Maps, Hammers, all the Recent Publications, &c, of J TENNANT, Mineralogist to Her Majesty, 149, Strand, London.

Practical Instruction is given in Geology and Mineralogy by Professor TENNANT, F.R G.S., at his residence, 149, Strand, W C.

MATRICULATION EXAMINATION, LOND. UNIV., January 1875.

F. A. HANBURY, M.A., Wrangler and late Senior Scholar of his College, READS WITH PUPILS for this Exam. He is assisted by efficient Lecturers in French, Chemistry, and Classics, and has been particularly successful for this Exam, having passed fifty-seven Pupils, to whom reference can be given. Two of these passed in the Honours list in January 1873, seventh and fourteenth respectively. A Class will commence early in September, and another early in October. Fees for the two, £14 and £10 10s. respectively. For further particulars, address 24, Old Square, Lincoln's Inn, W.C—A few Residents can be accommodated in Mr. Hanbury's house at Clapham.

PRELIMINARY EXAMINATION IN ARTS, ROYAL COLL. SURG., December 1874.

F. A. HANBURY, M.A., Wrangler and late Senior Scholar of his College, PREPARES PUPILS for this Exam He is assisted by efficient Lecturers in French and Chemistry, and has passed several Pupils for this Exam, to whom reference can be given. Terms from 8 to 12 Guineas, according to subjects taken up and time of joining the class. For further particulars, address 24, Old Square, Lincoln's Inn, W.C.

MATHEMATICS and SCIENCE.—Pupils prepared for Competitive and Pass Examinations by a High Wrangler and Nat. Science Man Successful in Tuition In the Country by Correspondence. Classes visited.—J. F. BLAKE, 6, Wells Road, Regent's Park, N.W.

FOR SALE.—A Collection of Rare Moths, &c., the property of a Missionary in India —Apply at the Baptist Mission House, 19, Castle Street, Holborn, E.C.

The Half-Guinea Ale

Sound and Bright for Summer Use.

WALTHAM BROS., BREWERS, STOCKWELL.

HAIR COLOUR WASH.—By damping the hair or whiskers with this beautifully perfumed Wash, in 24 hours the hair becomes its original colour, and remains so by an occasional using. 10s. 6d., sent for P.O order.—ALEX. ROSS, 248, High Holborn, London; and all Chemists.

NOSE MACHINE.—This is a contrivance which, applied to the nose for an hour daily, so directs the soft cartilage of which the member consists, that an ill-formed nose is quickly shaped to perfection. Anyone can use them, and without pain. Price 10s. 6d., sent carriage-free for P.O. order.—ALEX. ROSS, 248, High Holborn, London. Pamphlet sent for two stamps.

TRUSSES (Self-adjusting), in use for the last sixty years, and same as worn by his late Majesty William IV. From 10s. each. SALMON ODY & CO, by appointment to the Army and Navy, 29a, Strand, London. Price List post free.

CHEST EXPANDER and TROUSERS BRACE combined, 8s.; Ladies' Chest Expanders from 5s. 6d.—SALMON ODY & CO, 29a, Strand, London. Established 1806.

ELASTIC STOCKINGS for Varicose Veins or Weak Joints; and LADIES' ABDOMINAL BELTS, made to any size. Directions for self-measurement and prices post free. SALMON ODY & CO., 29a, Strand, London.

HOLLOWAY'S PILLS.—Hale Constitutions —The experience of years has shown that when the human frame has become debilitated from the effects of exposure, excess, or neglect, these Pills taken according to the directions will repair the mischief. Holloway's Pills exercise the most wonderful tonic properties in all cases of nervous depression, whereby the vital powers are weakened, and the circulation is languid and unsteady. They improve the appetite, strengthen the digestion, regulate the liver, and act as gentle aperients The Pills are suited to all ages and habits. A patient writes: "Your Pills to be valued require only to be known. During many years I sought a remedy in vain, was daily becoming weaker, but when I heard of your Pills, and had recourse to them, they soon restored me."

THE ONLY CHEAP FARMERS' NEWSPAPER.

THE CHAMBER OF AGRICULTURE JOURNAL

AND FARMERS' CHRONICLE,

Edited by JOHN ALGERNON CLARKE, Secretary to the Central Chamber of Agriculture,

Devotes special attention to the discussions and proceedings of the Chambers of Agriculture of Great Britain (which now number upwards of 18,000 members), besides giving original papers on practical farming, and a mass of intelligence of particular value to the agriculturist.

The London Corn, Seed, Hop, Cattle, and other Markets of Monday are specially reported in this Journal, which is despatched the same evening so as to insure delivery to country subscribers by the first post on Tuesday morning. Price 3d., or prepaid, 15s. a year post free.

Published by W. PICKERING, 21, Arundel Street, Strand, W.C.

"THE GARDEN,"

A Weekly Illustrated Journal devoted solely to Horticulture in all its Branches.

"THE GARDEN" is conducted by WILLIAM ROBINSON, F.L.S., Author of "Hardy Flowers," "Alpine Flowers for English Gardens," "The Parks, Promenades, and Gardens of Paris," &c.; and the best Writers in every Department of Gardening are contributors to its pages.

The following are some of the subjects regularly treated of in its pages:—

The Flower Garden.
Landscape Gardening.
The Fruit Garden.
Garden Structures.
Room and Window Gardens.
Notes and Questions.
Market Gardening.
Trees and Shrubs.
Hardy Flowers.
Town Gardens.
The Conservatory.
Public Gardens.
The Greenhouse and Stove.
The Household.
The Wild Garden.
The Kitchen Garden.

"THE GARDEN" may be obtained through all Newsagents and at the Railway Bookstalls, at 4d. per Copy. It may also be had direct from the Office at 5s. for a Quarter, 9s. 9d. for a Half-year, and 19s. 6d. for a Year, payable in advance, and in Monthly Parts. Specimen Copies (post-free), 4½d.

37, Southampton Street, Covent Garden, W.C.

SCIENTIFIC WORKS.

Owens College Essays.—Essays and Addresses by Professors and Lecturers of the Owens College, Manchester. Published in Commemoration of the Opening of the New College Buildings, October 7th, 1873. 8vo, 14s.

A series of papers bearing on such questions of literature, science, and politics as are of special interest at the present time, and written by men who are fully competent to deal with the various subjects. The following are specimens of the papers:—Original Research as a Means of Education, by Prof. Roscoe; Solar Physics, by Prof. Balfour Stewart; On some Relations of Culture to Practical Life, by Prof. Greenwood; Some Historical Results of the Science of Language, by Prof. Wilkins; The Judicature Act of 1873 in its Relation to the History of the Judicial System in England, by Prof. Bryce; The Railways and the State, by Prof. Stanley Jevons; The Peace of Europe, by Prof. Ward, &c.

Rendu's Theory of the Glaciers of Savoy. Translated by ALFRED WILLS, Q.C., late President of the Alpine Club. To which are added the Original Memoir and Supplementary Articles, by Professors TAIT and RUSKIN. Edited, with Introductory Remarks, by GEORGE FORBES, B.A., Professor of Natural Philosophy in the Andersonian University, Glasgow. 8vo, 7s. 6d. [This day.

The Principles of Science. By Prof. JEVONS, F.R.S. A Treatise on Logic and Scientific Method. Two vols. 8vo, 25s.

Elements of Physical Manipulation. By EDWARD C. PICKERING, Professor of Physics in the Massachusetts Institute of Technology. Part I. 8vo, 10s. 6d.

The Beginnings of Life: being some Account of the Nature, Modes of Origin, and Transformation of Lower Organisms. By H. CHARLTON BASTIAN, M.D., F.R.S. With upwards of 100 Illustrations. 2 vols. crown 8vo, 28s.

First Principles of Chemical Philosophy. By J. P. COOKE, JUN., Ervine Professor of Chemistry and Mineralogy in Harvard College. Crown 8vo, 12s. Third Edition, revised and corrected.

Acadian Geology. The Geologic Structure, Organic Remains, and Mineral Resources of Nova Scotia, New Brunswick, and Prince Edward Island. By J. W. DAWSON, LL.D., F.R.S., Principal of McGill College and University, Montreal. Second Edition, revised and enlarged. With Geological Map and Illustrations, 8vo, 18s.

Hereditary Genius: an Inquiry into its Laws and Consequences. By FRANCIS GALTON, F.R.S. 8vo. 12s.

The Theory of Evolution of Living Things, and the Principles of Evolution applied to Religion, considered as illustrative of the Wisdom and Beneficence of the Almighty. By the Rev. GEORGE HENSLOW, M.A., F.R.S. Crown 8vo, 6s.

The Student's Flora of the British Islands. By J. D. HOOKER, C.B., F.R.S., President of the Royal Society. Globe 8vo, 10s. 6d.

Professor Huxley's Lay Sermons, Addresses, and Reviews. New and cheaper Edition, 7s. 6d.

Professor Huxley's Critiques and Addresses. 8vo, 10s. 6d.

On the Genesis of Species. By St. George MIVART, F.R.S. Second Edition, with Notes in reference and reply to Darwin's "Descent of Man." With numerous Illustrations. Crown 8vo, 9s.

The Scientific Bases of Faith. By J. J. MURPHY. 8vo, 14s.

Sound and Music: a Non-mathematical Treatise on the Physical Constitution of Musical Sounds and Harmony, including the chief Acoustical Discoveries of Professor Helmholtz. By SEDLEY TAYLOR, M.A. Crown 8vo, 8s. 6d.

MACMILLAN & CO., LONDON.

KING'S COLLEGE, LONDON.

The THEOLOGICAL DEPARTMENT.—New Students must present themselves on TUESDAY, September 29.

The College Theological Testamur can be obtained by

A. Graduates in Arts of any British University, in three terms.

B. Associates of the General Literary Department of King's College, in six terms.

C. All duly qualified persons of 21 years of age, in six terms.

Two Studentships of the value of £30 for two years will be adjudged by examination to those entering the College in October next.

There is also a Preparatory Class for those wishing to pass the Entrance Examinations.

For information, apply, personally or by post-card, to J. W. Cunningham, Esq., Secretary.

KING'S COLLEGE, LONDON.

DEPARTMENT of GENERAL LITERATURE and SCIENCE.—New Students will be admitted on WEDNESDAY, September 30.

The Department is thus divided:—

1. The Classical Division (embracing Classics, Mathematics, English History, and Modern Languages).

2. The Modern Division, which includes English, Latin, Modern Languages, Mathematics, Natural Philosophy, Chemistry, Geology, and Free-hand Drawing.

One Freake Exhibition of £20 will be given at the commencement of the Michaelmas Term to the Student passing the best examination on entering the College.

For information, apply, personally or by post-card, to J. W. Cunningham, Esq., Secretary.

KING'S COLLEGE, LONDON.

DEPARTMENT of ENGINEERING and APPLIED SCIENCES.—New Students will be admitted on WEDNESDAY, September 30.

The course of study provides practical education for young men who intend to engage in engineering, surveying, architecture, telegraphy, and the higher branches of chemical and manufacturing art.

This Department has attached to it a workshop, also chemical, physical, and photographic laboratories.

One Freake and two College Exhibitions of £20, £30, and £21 respectively, will be given at the commencement of the Michaelmas Term to the Students passing the best examination on entering the College.

For information, apply, personally or by post-card, to J. W. Cunningham, Esq., Secretary.

KING'S COLLEGE, LONDON.

MEDICAL DEPARTMENT.—The WINTER SESSION will OPEN on THURSDAY, Oct. 1, with an Introductory Lecture by Dr. FERRIER.

Warneford Scholarships.—Students entering in October next will have the privilege of contending for two Scholarships of £25 each for three years.

Five Medical Scholarships are awarded at the close of each winter session for proficiency in professional subjects, viz., one of £40 for two years, one of £30 for one year, and three of £20 for one year.

For further information apply, personally or by post-card, to J. W. Cunningham, Esq., Secretary.

KING'S COLLEGE, LONDON.

The EVENING CLASSES.—These Classes will RE-OPEN on MONDAY, October 5, in Divinity, Latin, Greek, French, German, Hebrew, Italian, Spanish, German Literature, English Literature and Composition, English History, Geography, Arithmetic, Writing, Mathematics, Commerce, Drawing, Chemistry, Practical Chemistry, Mechanics, Physiology, Physics, Botany, Zoology, Logic, Political Economy, Mineralogy, Geology, Law, and Public Speaking.

For the prospectus, apply, personally or by post-card, to J. W. Cunningham, Esq., Secretary.

KING'S COLLEGE, LONDON.

The SCHOOL.—New Pupils will be admitted on TUESDAY, September 22. There are four divisions:—

1. Upper Classical School, intended to prepare Pupils for the Universities, for the theological, general literature, and medical departments of the College, and for the learned professions.

2. Upper Modern School, intended to prepare Pupils for general and mercantile pursuits, for the department of Engineering in the College, and for the Military Academies.

3. The Middle School comprises several Classes, each with its classical and modern division, for Pupils who are too old for the Lower, but not sufficiently advanced for the Upper School. Great attention is paid in this Division to arithmetic, writing, and bookkeeping, and to the subjects required for the Home Civil Service Examinations and those for mercantile appointments.

4. Lower School.—This Division includes boys over eight years of age, and is intended to give a complete course of education up to such a point as will prepare them to enter with advantage either of the two senior divisions.

For information, apply, personally or by post-card, to J. W. Cunningham, Esq., Secretary.

THE LONDON HOSPITAL AND MEDICAL COLLEGE.

The next WINTER SESSION will commence on THURSDAY Oct. 1st, 1874, when the Introductory Lecture will be given at 3 p.m. by SAMUEL FENWICK, M.D., Assistant Physician to the Hospital.

General Fee to Lectures, with two years' Practical Anatomy, and Hospital Practice, 90 guineas, payable in two instalments of 45 guineas each. Library Fee, £1 1s. Special entries can be made to Lectures or Practice.

The Hospital contains 600 beds. There are Medical and Surgical Wards for Children, Wards for Syphilis, Special Departments for Diseases of Women, Diseases of the Eye, Diseases of the Ear, Diseases of the Skin and special arrangements for Diseases of the Throat. A Maternity Department exists for the delivery of lying-in women at their own homes. 586 cases were attended last year by the Students of the Hospital.

For instruction in Mental Diseases, Students can attend without further fee the practice of Dr. John Millar, Superintendent of Bethnal House Asylum, a few minutes' walk from the Hospital.

Clinical Lectures, both Medical and Surgical, will be given every week, and practical instructions imparted in all the departments.

The In-patients during 1873 were 5,613, and the Out-patients 43,808; total, 49,421.

At the Medical College, which has been enlarged, Lectures will be given on all the subjects required by the Examining Boards.

Members of the Staff and Lecturers at the College.

Mr. J. Luke, F.R.S.
Mr. John Adams
Mr. Curling, F.R.S.
Dr. Herbert Davies
Dr. Andrew Clark
Dr. Ramskill
Dr. Langdon Down
Dr. Hughlings-Jackson
Dr. Sutton
Dr. Fenwick
Dr. Woodman
Dr. Stephen Mackenzie
Dr. A. E. Sansom
Mr. Jonathan Hutchinson
Mr. Maunder
Mr. Couper
Mr. Walter Rivington
Mr. Jas. Adams
Mr. Waren Tay
Mr. McCarthy
Mr. Reeves
Dr. Head
Dr. Palfrey
Mr. H. J. Barrett
Mr. A. W. Barrett
Dr. Letheby
Dr. Meymott Tidy
Dr. Prosser James
Dr. Morell-Mackenzie
Mr. J. E. D. Rogers
Mr. Gilbert Baker

The following Prizes and Appointments are open without any further payment to Students paying the general fee of 90 guineas:—

Seven Scholarships, to be offered for competition in the Winter Session:

1. A Scholarship of £30 to the Student of less than three months' standing who passes in October the best examination in the subjects required at the Preliminary Examination.
2. A Scholarship of £20 to the Student of less than three months' standing placed second in the above examination.
3. A Scholarship of £20 in Human Anatomy for first-year Students; to be awarded in April 1875.
4. A Scholarship, value £25, in Anatomy, Physiology, and Chemistry, for first-year and second-year Students; to be awarded in April 1875.
5. A Hospital Scholarship, value £20, for Clinical Medicine; to be awarded in April 1875.
6. A Hospital Scholarship, value £20, for Clinical Surgery; to be awarded in April 1875.
7. A Hospital Scholarship, value £20, for Clinical Obstetrics, to be awarded in April 1875; and a Prize of £5 to the Student who has attended most Midwifery Cases for the Hospital during the preceding twelve months.

The Duckworth Nelson Prize, value £10, for Practical Medicine and Surgery (Biennial), 1875.

Money Prizes to the value of £60 given annually by the House Committee for zeal in Dressing Out-patients and knowledge of Minor Surgery.

Certificates of Honour in all the Classes according to the results of the General Examinations at the end of the Session, and Special Certificates to those who have filled with credit the duties of the Hospital Appointments.

Four House-Surgeoncies, tenable for three or six months, and Dresserships to In-patients, open to all.

Dresserships to Out-patients, with the privilege of competing for the Prizes above mentioned.

The office of the Resident Medical Officer, tenable for two years, with a salary of £75 the first year, and £100 the second year.

The Office of Junior Resident Medical Officer, tenable for six months.

Four Medical Assistantships, held for three months, with residence and board in the Hospital for three weeks.

The office of Resident Accoucheur, tenable for six months.

N.B.—The holders of all the resident offices are provided with rooms and board free of expense.

Four offices of Clinical Assistants in the Out-patients' Department, each at a salary of £40.

The office of Medical Registrar, salary 25 guineas.

The office of Surgical Registrar, salary 35 guineas.

Prosectors of Anatomy, Ward Clerks, and Post-mortem Clerks.

A Prospectus, giving details, will be forwarded on application to the Bedell of the London Hospital Medical College, Turner Street, E.

Further information may also be obtained from Mr. James E. Adams, Treasurer, 10, Finsbury Circus, E.C.; or Mr. Waren Tay, Vice-Dean, at the Medical College.

MACMILLAN & CO.'S

GOLDEN TREASURY SERIES.

Uniformly Printed in 18mo., with Vignette Titles by Sir NOEL PATON, T. WOOLNER, W. HOLMAN HUNT, J. E. MILLAIS, ARTHUR HUGHES, &c. Engraved on Steel by JEENS. Bound in extra cloth, 4*s.* 6*d.* each volume. Also kept in morocco and calf bindings.

"*Messrs. Macmillan have, in their Golden Treasury Series, especially provided editions of standard works, volumes of selected poetry, and original compositions, which entitle this series to be called classical. Nothing can be better than the literary execution, nothing more elegant than the material workmanship.*"—British Quarterly Review.

The Golden Treasury of the Best Songs and Lyrical Poems in the English Language. Selected and arranged, with Notes, by FRANCIS TURNER PALGRAVE.

"*This delightful little volume, the Golden Treasury, which contains many of the best original lyric pieces and songs in our language, grouped with care and skill, so as to illustrate each other like the pictures in a well-arranged gallery.*"—Quarterly Review.

The Children's Garland from the best Poets. Selected and arranged by Coventry Patmore.

"*It includes specimens of all the great masters in the art of poetry, selected with the matured judgment of a man concentrated on obtaining insight into the feelings and tastes of childhood, and desirous to awaken its finest impulses, to cultivate its keenest sensibilities.*"—Morning Post.

The Book of Praise. From the best English Hymn Writers. Selected and arranged by Sir ROUNDELL PALMER. A New and Enlarged Edition.

The Fairy Book; the best Popular Fairy Stories. Selected and rendered anew by the Author of "John Halifax, Gentleman."

"*A delightful selection, in a delightful external form; full of the physical splendour and vast opulence of proper fairy tales.*"—Spectator.

The Ballad Book. A Selection of the Choicest British Ballads. Edited by William ALLINGHAM.

"*His taste as a judge of old poetry will be found, by all acquainted with the various readings of old English ballads, true enough to justify his undertaking so critical a task.*"—Saturday Review.

The Jest Book. The Choicest Anecdotes and Sayings. Selected and arranged by Mark LEMON.

"*The fullest and best jest book that has yet appeared.*"—Saturday Review.

Bacon's Essays and Colours of Good and Evil. With Notes and Glossarial Index. By W. ALDIS WRIGHT, M.A.

The Pilgrim's Progress from this World to that which is to come. By John Bunyan.

"*A beautiful and scholarly print.*"—Spectator.

The Sunday Book of Poetry for the Young. Selected and arranged by C. F. Alexander.

"*A well-selected volume of sacred poetry.*"—Spectator.

A Book of Golden Deeds of all Times and all Countries. Gathered and narrated anew. By the Author of "The Heir of Redclyffe."

The Poetical Works of Robert Burns. Edited, with Biographical Memoir, Notes, and Glossary, by Alexander Smith. Two vols.

The Adventures of Robinson Crusoe. Edited from the Original Edition by J. W. Clark, M.A., Fellow of Trinity College, Cambridge.

The Republic of Plato. Translated into English, with Notes by J. Ll. Davies, M.A., and D. J. VAUGHAN, M.A.

The Song Book. Words and Tunes from the best Poets and Musicians. Selected and arranged by John Hullah, Professor of Vocal Music in King's College, London.

La Lyre Francaise. Selected and arranged, with Notes, by Gustave Masson, French Master in Harrow School.

Tom Brown's School Days. By An Old Boy.

A Book of Worthies. Gathered from the Old Histories and written anew by the Author of "The Heir of Redclyffe."

MACMILLAN & CO., LONDON.

HEALTH FOR ALL.

PRESTON'S PURIFYING PILLS.—The BLOOD MEDICINE. Sold in boxes at 7½*d*., 1*s*. 1½*d*., and 2*s*. 9*d*. Sent free on receipt of 8, 14, or 33 stamps.

This fine BLOOD Medicine is warranted not to contain a single particle of MERCURY, or any other Mineral, but to consist entirely of Medicinal Balsams PURELY VEGETABLE. One trial will convince anyone of their efficacy in all diseases of the Head, Chest, Heart, Lungs, Kidneys, Liver, Bowels, and likewise in Skin Diseases. These Pills create new, rich, and pure blood, and expel all impurities. They give IMMEDIATE relief, and very quickly cure, as a single box will prove.

They strengthen the constitution, improve the health, and greatly prolong life.

There is considerable saving in buying the larger boxes, as a 2*s*. 9*d*. box contains 100 pills.

As a family medicine they are greatly to be preferred, as they do not act upon the bowels, and are not in the slightest degree opening.

Prepared only by THOMAS PRESTON, M.B., at the City Medical Hall, 84, Long Lane, Smithfield, London.

⁂ The Government Stamp is on every box.

LUNG HEALER,

FOR DISEASES OF THE CHEST, THROAT, AND LUNGS.

PRESTON'S LUNG HEALER is a fine Balsamic Elixir which acts direct upon the Lungs, giving immediate relief, and eventually a permanent and lasting cure, even in cases where everything else has been tried and failed.

LUNG HEALER quickly cures Coughs, Colds, Asthma, Tightness or Wheezing at the Chest, difficulty of Breathing, Hoarseness, Phlegm, Tickling of the Throat, Shortness of Breath, Incipient Decline, Numbness and Weakness of the Lungs, Pains in the Chest, and Wasting Influenza, Hectic Fever, Night Sweats, Decay of the Lungs, Tubercular Disease, Expectoration, Palpitation, and all the symptoms of Impending Consumption.

LUNG HEALER strengthens the Lungs and thereby prevents Consumption. The Voice improves; Coughs and Colds are guarded against. It thoroughly eradicates hereditary consumptive taint if taken in time, and all who may be threatened with decline may rest in safety after a few doses of LUNG HEALER.

Sold in bottles at 2*s*. 9*d*. by THOMAS PRESTON, M.B., at the City Medical Hall, 84, Long Lane, Smithfield, London. The Government Stamp is on every bottle.

⁂ Order of any Chemist.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS

is allowed by upwards of 500 Medical Men to be the most effective invention in the curative treatment of Hernia. The use of a steel spring, so often hurtful in its effects, is here avoided; a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, 2 inches below the hips, being sent to the manufacturer,

JOHN WHITE, 228, Piccadilly.

Price of a Single Truss, 16*s*., 21*s*., 26*s*. 6*d*., and 31*s*. 6*d*.
" Double " 31*s*. 6*d*, 42*s*., and 52*s*. 6*d*.
" Umbilical " 42*s* and 52*s*. 6*d*.
} Post-free.

ELASTIC STOCKINGS, KNEE-CAPS,

&c., for Varicose Veins and all cases of weakness and Swellings of the Legs, Sprains, &c. They are porous, light in texture, and inexpensive, and drawn on over an ordinary stocking. Price 4*s*. 6*d*., 7*s*. 6*d*., 10*s*., and 16*s*. each. Postage free.

JUDSON'S DYES.—18 Colours, 6d. each.

RIBBONS, WOOL, SILK, FEATHERS,

Completely dyed in 10 minutes without soiling the hands.

Full Instructions supplied. Of all Chemists and Stationers.

JUDSON'S DYES.—Dyeing at Home.—JUDSON'S simple DYES are most useful and effectual. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES. Beautiful effects are thus produced in green, pink, brown, and many other colours—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES.—Ferns, Grasses, Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c., by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed.

JUDSON'S DYES.—Ink—Ink—Ink.—A Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water.

JUDSON'S DYES.—For Colouring Architectural Plans, &c.—Much trouble may be saved in grinding up colours to a uniform tint. They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades.

JUDSON'S DYES.—For Staining Wood.—Diluted with Water. They sink deeply into the fibre, and will not rub off. They form the most economical stain on record. Light Brown for mahogany colour is excellent; No. 2 Black for walnut; Canary for satin, also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE,

Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

THE

JOURNAL OF APPLIED CHEMISTRY,

A MONTHLY PUBLICATION OF 16 PAGES QUARTO,

Devoted to Chemistry as applied to Arts and Manufactures, Agriculture, Metallurgy, &c. &c.

At Two Dollars and Twenty-five Cents per annum, or One Dollar and Seventy-five Cents paid strictly in advance, including postage to United Kingdom.

Each number contains Original Articles on General Chemistry applied to Arts and Manufactures; Matter on Particular Fabrications, as Petroleum, Soaps, Tanning, Dyeing, and numerous others.

A suitable space is also devoted to Practical Recipes and interesting Scientific Facts.

Full and carefully-prepared Market Reviews and Prices Current of Drugs and Chemicals of every description are given in each number for New York, Boston, and Philadelphia, with Tables of Imports.

For references to Noblemen, Members of Parliament, Doctors of eminence, Queen's Counsel, &c., address to 3, Pump Court, Temple, or to the care of Messrs Butterworth, 7, Fleet Street, her Majesty's Publishers.

ROYAL SCHOOL OF MINES.

DEPARTMENT OF SCIENCE AND ART.

During the Twenty fourth Session, 1874–75, which will commence on the 1st of October, the following COURSES of LECTURES and PRACTICAL DEMONSTRATIONS will be given :—

1. Chemistry By E Frankland, Ph D. F R.S.
2. Metallurgy By John Percy, M.D F R S
3. Natural History. By T. H. Huxley, LL D F R S
4. Mineralogy } By Warington W Smyth, M A F R.S, *Chairman*
5. Mining }
6. Geology By A. C Ramsay, LL.D. F R S.
7. Applied Mechanics By T M Goodeve, M A.
8. Physics., By Frederick Guthrie, Ph D. F R.S.
9. Mechanical Drawing. By Rev. J. H. Edgar, M.A.

The Fee for Students desirous of becoming Associates is £30 in one sum, on entrance, or two annual payments of £20, exclusive of the Laboratories.

Tickets to separate Courses of Lectures are issued at £3 and £4 each

Officers in the Queen's Service, Her Majesty's Consuls, Acting Mining Agents, and Managers, may obtain Tickets at reduced prices.

Science Teachers are also admitted to the Lectures at reduced fees.

For a Prospectus and information apply to the Registrar, Royal School of Mines, Jermyn Street, London, S.W.

TRENHAM REEKS, Registrar.

NOTE —By order of the Lords of the Committee of Council on Education, the instruction in Chemistry, Physics, Applied Mechanics, and Natural History will be given in the New Buildings in the Exhibition Road, South Kensington.

LONDON LIBRARY,

12, ST. JAMES'S SQUARE —Founded in 1841.

Patron—H.R.H. THE PRINCE OF WALES.

President—THOMAS CARLYLE, ESQ.

This Library contains 90,000 Volumes of Ancient and Modern Literature, in various Languages Subscription, £3 a year, or £2 with Entrance Fee of £6, Life Membership, £26.

Superintendent Literary Department.

ST. BARTHOLOMEW'S HOSPITAL AND COLLEGE.

SCHOLARSHIPS IN SCIENCE.

Two Scholarships in Science have been founded at St. Bartholomew's Hospital:—

1. An Open Scholarship of the value of £100, tenable for one year, to be competed for in September The subjects of examination are Physics, Chemistry, Botany, and Zoology. The successful candidate will be required to enter at St. Bartholomew's Hospital in October next.

2. Preliminary Scientific Scholarship of the value of £50, tenable for one year, to be competed for in October next by Students of the Hospital of less than six months' standing. The subjects of examination are identical with those of the Open Scholarship.

For further particulars and syllabus of subjects, application may be made personally or by letter to the Warden of the College, St. Bartholomew's Hospital.

THE LONDON HOSPITAL AND MEDICAL COLLEGE.

The next WINTER SESSION will commence on THURSDAY, Oct. 1st, 1874, when the Introductory Lecture will be given at 3 p m. by SAMUEL FENWICK, M D, Assistant Physician to the Hospital.

General Fee to Lectures, with two years' Practical Anatomy, and Hospital Practice, 90 guineas, payable in two instalments of 45 guineas each. Library Fee, £1 1s. Special entries can be made to Lectures or Practice.

The Hospital contains 600 beds There are Medical and Surgical Wards for Children, Wards for Syphilis, Special Departments for Diseases of Women, Diseases of the Eye, Diseases of the Ear, Diseases of the Skin, and special arrangements for Diseases of the Throat A Maternity Department exists for the delivery of lying-in women at their own homes. 586 cases were attended last year by the Students of the Hospital.

For instruction in Mental Diseases, Students can attend without further fee the practice of Dr. John Millar, Superintendent of Bethnal House Asylum, a few minutes' walk from the Hospital.

Clinical Lectures, both Medical and Surgical, will be given every week, and practical instructions imparted in all the departments.

The In-patients during 1873 were 5,613, and the Out-patients 43,808; total, 49,421.

At the Medical College, which has been enlarged, Lectures will be given on all the subjects required by the Examining Boards.

Members of the Staff and Lecturers at the College.

Dr Morell-Mackenzie
Mr. J. E. D. Rogers
Mr. Gilbert Baker

The following Prizes and Appointments are open without any further payment to Students paying the general fee of 90 guineas:—

Seven Scholarships, to be offered for competition in the Winter Session:

1. A Scholarship of £50 to the Student of less than three months' standing who passes in October the best examination in the subjects required at the Preliminary Examination.
2. A Scholarship of £20 to the Student of less than three months' standing placed second in the above examination.
3. A Scholarship of £20 in Human Anatomy for first-year Students; to be awarded in April 1875
4. A Scholarship, value £25, in Anatomy, Physiology, and Chemistry, for first-year and second-year Students; to be awarded in April 1875
5. A Hospital Scholarship, value £20, for Clinical Medicine; to be awarded in April 1875.
6. A Hospital Scholarship, value £20, for Clinical Surgery; to be awarded in April 1875.
7. A Hospital Scholarship, value £20, for Clinical Obstetrics, to be awarded in April 1875; and a Prize of £5 to the Student who has attended most Midwifery Cases for the Hospital during the preceding twelve months.

The Duckworth Nelson Prize, value £10, for Practical Medicine and Surgery (Biennial), 1875.

Money Prizes to the value of £60 given annually by the House Committee for zeal in Dressing Out-patients and knowledge of Minor Surgery.

Certificates of Honour in all the Classes according to the results of the General Examinations at the end of the Session, and Special Certificates to those who have filled with credit the duties of the Hospital Appointments.

Four House-Surgeoncies, tenable for three or six months, and Dresserships to In-patients, open to all.

Dresserships to Out-patients, with the privilege of competing for the Prizes above mentioned.

The office of the Resident Medical Officer, tenable for two years, with a salary of £75 the first year, and £100 the second year.

The Office of Junior Resident Medical Officer, tenable for six months.

Four Medical Assistantships, held for three months, with residence and board in the Hospital for three weeks.

The office of Resident Accoucheur, tenable for six months.

N B—The holders of all the resident offices are provided with rooms and board free of expense.

Four offices of Clinical Assistants in the Out-patients' Department, each at a salary of £40.

The office of Medical Registrar, salary 25 guineas.

The office of Surgical Registrar, salary 35 guineas.

Prosectors of Anatomy, Ward Clerks, and Post mortem Clerks.

A Prospectus, giving details, will be forwarded on application to the Bedell of the London Hospital Medical College, Turner Street, E.

Further information may also be obtained from Mr James E Adams, Treasurer, 10, Finsbury Circus, E.C.; or Mr. Waren Tay, Vice-Dean, at the Medical College.

ST. MARY'S HOSPITAL MEDICAL SCHOOL.

Opening of WINTER SESSION, October 1st, 1874. Introductory Address by Mr EDMUND OWEN.
For further particulars apply to the Registrar at the Hospital, or to

A. B. SHEPHERD, M.B., Dean of the School.

ST. MARY'S HOSPITAL MEDICAL SCHOOL.

THREE OPEN SCHOLARSHIPS and TWO EXHIBITIONS, October 1874.
For particulars apply to the Dean, St. Mary's Hospital, Paddington, W.

EVENING SCIENCE LECTURES.—Mr. W J WILSON, F C.S. F.P S (Demonstrator of Practical Physics at South Kensington), will commence the following Courses of Lectures in the Theatre of the Birkbeck Institution, Southampton Buildings, W C, on October 1st and 2nd.—

Acoustics, Light, and Heat, 30 Lectures, on Thursdays, at 8 p m.
Electricity and Magnetism, 30 Lectures, on Fridays, at 8 p m.

Fee for one Course, 5s.; for the two, 7s. 6d For detailed Syllabus, particulars of Special Prizes, &c, apply to the Librarian.
At the Class Examinations of the Science and Art Department, May 1874, 130 Papers in Physics were worked by Mr Wilson's Pupils. Of these, 87 passed First Class and obtained Queen's Prizes; 41 passed Second Class, and two failed. In 1873, 68 Papers worked: 45 First Class, 23 Second Class, and *none failed*.

MATRICULATION EXAMINATION, LOND. UNIV., January 1875.

F. A. HANBURY, M.A., Wrangler and late Senior Scholar of his College, READS WITH PUPILS for this Exam. He is assisted by efficient Lecturers in French, Chemistry, and Classics, and has been particularly successful for this Exam, having passed fifty-seven Pupils, to whom reference can be given Two of these passed in the Honours list in January 1873, seventh and fourteenth respectively. A Class will commence early in September, and another early in October. Fees for the two, £14 and £10 10s. respectively. For further particulars, address 24, Old Square, Lincoln's Inn, W.C.—A few Residents can be accommodated in Mr. Hanbury's house at Clapham.

PRELIMINARY EXAMINATION IN ARTS, ROYAL COLL. SURG., December 1874

F. A. HANBURY, M.A., Wrangler and late Senior Scholar of his College, PREPARES PUPILS for this Exam. He is assisted by efficient Lecturers in French and Chemistry, and has passed several Pupils for this Exam, to whom reference can be given Terms from 8 to 12 Guineas, according to subjects taken up and time of joining the class. For further particulars, address 24, Old Square, Lincoln's Inn, W C.

EVENING SCIENCE LECTURES.—PHYSICAL GEOGRAPHY AND GEOLOGY.—Mr H. FISHER, F.G.S, will deliver, at the Birkbeck Institution, Southampton Buildings, Chancery Lane, a Course of Thirty Lectures on each of the above subjects, on THURSDAY EVENINGS at 7 and 8 o'clock respectively, commencing October 1st Fee for the Two Courses, 7s. 6d.; a Single Course, 5s.—For further particulars apply to Secretary.

MATHEMATICS and SCIENCE.—Pupils prepared for Competitive and Pass Examinations by a High Wrangler and Nat. Science Man Successful in Tuition. In the Country by Correspondence. Classes visited.—J. F BLAKE, 6, Wells Road, Regent's Park, N.W.

ROYAL COUNCIL OF EDUCATION.—The Laboratory and Class-rooms of Berners College are open for Pupils EVERY DAY and EVENING. The subjects of the above Examinations can be studied either Privately or in Classes. Fees moderate. Analyses and investigations conducted.—Apply to Prof. E. V. GARDNER, F.E.S., F.S A., 44, Berners Street, W

The SECOND MASTER of a High-class Grammar School receives a few Resident Pupils. Special attention is given to the study of Natural Sciences.—For further particulars apply by letter to "Tripos," care of the Publisher of NATURE, 29, Bedford Street, Strand, London, W.C.

TUITION in CLASSICS, ENGLISH LANGUAGE, HISTORY, and LITERATURE.—An experienced Tutor attends Schools and Families, in London or the Country, to teach the above Subjects. Prepares for the Public Schools, Universities, and the Army.—Address, TUTOR, 15, Gledhow Terrace, South Kensington, S.W.

TO NATURALISTS and GEOLOGISTS.—The ORFORD CASTLE COLLECTION OF CRAG FOSSILS. (See Advertisement in NATURE of June 18th) For particulars of these Collections address Fredc Collingwood, Esq, F.G S, 4, St Martin's Place, Trafalgar Square, superscribed "ORFORD CASTLE FUND"

July 8th.

GEOLOGY.—ELEMENTARY COLLECTIONS to illustrate the New Edition of "Lyell's Students' Elements of Geology," and facilitate the important study of this science, can be had at 2, 5, 10, 20, 50, to 1,000 guineas. Also, Single Specimens of Rocks, Minerals, Fossils, and Recent Shells. Geological Maps, Hammers, all the Recent Publications, &c, of J. TENNANT, Mineralogist to Her Majesty, 149, Strand, London.

Practical Instruction is given in Geology and Mineralogy by Professor TENNANT, F.R.G.S, at his residence, 149, Strand, W.C.

THOMAS D. RUSSELL,
GEOLOGIST & MICROSCOPIST,
48, ESSEX STREET, STRAND, W.C.
(Late of Arundel Street.)

British Rocks—100 Specimens ... ... One Guinea.
British Fossils—100 " ... ... One Guinea.

Collections and Specimens of
British Fossils from the Crag to the Silurian inclusive.

Detailed Catalogues post-free.

NOTICE.—To Science Classes.—MOTTERSHEAD AND CO., LABORATORY FURNISHERS, EXCHANGE STREET, MANCHESTER, supply all the Apparatus enumerated in the SOUTH KENSINGTON LISTS FOR THE USE OF TEACHERS OF CHEMICAL OR PHYSICAL SCIENCE (including Light, Heat, Electricity, Magnetism, &c), and will be happy to show intending purchasers specimens of the various Instruments, or to forward Estimates on application Orders exceeding £2 in value delivered free to any railway station in England.

TRUSSES (Self-adjusting), in use for the last sixty years, and same as worn by his late Majesty William IV. From 10s. each SALMON ODY & CO, by appointment to the Army and Navy, 292, Strand, London. Price List post free.

CHEST EXPANDER and TROUSERS BRACE combined, 8s., Ladies' Chest Expanders from 5s 6d—SALMON ODY & CO, 292, Strand, London. Established 1806.

ELASTIC STOCKINGS for Varicose Veins or Weak Joints; and LADIES' ABDOMINAL BELTS, made to any size. Directions for self-measurement and prices post free. SALMON ODY & CO., 292, Strand, London.

HAIR COLOUR WASH.—By damping the hair or whiskers with this beautifully perfumed Wash, in 24 hours the hair becomes its original colour, and remains so by an occasional using. 10s. 6d., sent for P.O order.—ALEX. ROSS, 248, High Holborn, London; and all Chemists.

NOSE MACHINE.—This is a contrivance which, applied to the nose for an hour daily, so directs the soft cartilage of which the member consists, that an ill-formed nose is quickly shaped to perfection. Anyone can use them, and without pain. Price 10s. 6d., sent carriage-free for P.O. order.—ALEX. ROSS, 248, High Holborn, London. Pamphlet sent for two stamps.

HOLLOWAY'S PILLS and OINTMENT.—A great and precious property possessed by Holloway's inestimable remedies is that no skill or experience is required for their successful administration. No education or intelligence is necessary for using them to advantage, beyond the capacity of understanding the plain and intelligible instructions accompanying each box and pot. For the cure of all internal and external ailments, Professor Holloway has considerately placed such printed rules round his remedies that error is impossible after they have been once read with attention. In these Pills there is nothing nauseous to the taste or trying to the most tender age or delicate constitution. They purify, regulate, and strengthen the entire human system.

DR. LIONEL BEALE'S WORKS.

SCIENTIFIC WORKS.

Owens College Essays.—Essays and Addresses by Professors and Lecturers of the Owens College, Manchester. Published in Commemoration of the Opening of the New College Buildings, October 7th, 1873. 8vo, 14s.

A series of papers bearing on such questions of literature, science, and politics as are of special interest at the present time, and written by men who are fully competent to deal with the various subjects. The following are specimens of the papers:—Original Research as a Means of Education, by Prof Roscoe, Solar Physics, by Prof. Balfour Stewart; On some Relations of Culture to Practical Life, by Prof. Greenwood; Some Historical Results of the Science of Language, by Prof. Wilkins; The Judicature Act of 1873 in its Relation to the History of the Judicial System in England, by Prof. Bryce; The Railways and the State, by Prof. Stanley Jevons; The Peace of Europe, by Prof. Ward, &c.

Rendu's Theory of the Glaciers of Savoy. Translated by ALFRED WILLS, Q.C, late President of the Alpine Club. To which are added the Original Memoir and Supplementary Articles, by Professors TAIT and RUSKIN. Edited, with Introductory Remarks, by GEORGE FORBES, B.A, Professor of Natural Philosophy in the Andersonian University, Glasgow. 8vo, 7s. 6d. [This day.

The Principles of Science. By Prof. JEVONS, F.R.S. A Treatise on Logic and Scientific Method. Two vols. 8vo, 25s.

Elements of Physical Manipulation. By EDWARD C. PICKERING, Professor of Physics in the Massachusetts Institute of Technology. Part I. 8vo, 10s. 6d.

The Beginnings of Life: being some Account of the Nature, Modes of Origin, and Transformation of Lower Organisms. By H. CHARLTON BASTIAN, M.D. F.R.S. With upwards of 100 Illustrations. 2 vols. crown 8vo, 28s.

First Principles of Chemical Philosophy. By J. P. COOKE, jun., Ervine Professor of Chemistry and Mineralogy in Harvard College. Crown 8vo, 12s. Third Edition, revised and corrected.

Acadian Geology. The Geologic Structure, Organic Remains, and Mineral Resources of Nova Scotia, New Brunswick, and Prince Edward Island. By J. W. DAWSON, LL.D. F.R.S., Principal of McGill College and University, Montreal. Second Edition, revised and enlarged. With Geological Map and Illustrations, 8vo, 18s.

Hereditary Genius: an Inquiry into its Laws and Consequences. By FRANCIS GALTON, F.R.S. 8vo. 12s.

The Theory of Evolution of Living Things, and the Principles of Evolution applied to Religion, considered as Illustrative of the Wisdom and Beneficence of the Almighty. By the Rev. GEORGE HENSLOW, M.A. F.R.S. Crown 8vo, 6s.

The Student's Flora of the British Islands. By J. D. HOOKER, C.B. F.R.S., President of the Royal Society. Globe 8vo, 10s. 6d.

Professor Huxley's Lay Sermons, Addresses, and Reviews. New and cheaper Edition, 7s. 6d.

Professor Huxley's Critiques and Addresses. 8vo, 10s. 6d.

On the Genesis of Species. By St. George MIVART, F.R.S. Second Edition, with Notes in reference and reply to Darwin's "Descent of Man." With numerous Illustrations. Crown 8vo, 9s.

The Scientific Bases of Faith. By J. J. MURPHY. 8vo, 14s.

Sound and Music: a Non-mathematical Treatise on the Physical Constitution of Musical Sounds and Harmony, including the chief Acoustical Discoveries of Professor Helmholtz. By SEDLEY TAYLOR, M.A. Crown 8vo, 8s. 6d.

MACMILLAN & CO., LONDON.

TO SECRETARIES OF SCIENTIFIC AND LITERARY SOCIETIES.

It having been suggested that the publication of a weekly Diary in NATURE of the Meetings, &c. *of the various provincial* Scientific and Literary Societies *would be found very useful, not only to the Members of such Societies, but to all who are interested in scientific and literary subjects, the Publishers have determined to devote a portion of their Advertisement columns to this purpose, and to insert* NOTICES OF MEETINGS, SUBJECTS OF LECTURES, *&c., at the nominal charge of* One Shilling *for each insertion.*

The Publishers of NATURE *will be glad if the Secretaries of Societies will aid them in their endeavours to make this weekly Diary as complete and useful as possible. Notices intended for insertion therein must be sent, addressed to the* Publishers, *by* Wednesday Mornings.

OFFICE—29, BEDFORD STREET, STRAND.

Awarded to J. S. FRY & SONS.

CARACAS
COCOA

Owes its delicious flavour to the choice Caracas and other Cocoas with which it is manufactured.

JUDSON'S DYES.—18 Colours, 6d. each.

RIBBONS, WOOL, SILK, FEATHERS,

Completely dyed in 10 minutes without soiling the hands.

Full Instructions supplied. Of all Chemists and Stationers.

JUDSON'S DYES.—Dyeing at Home.—JUDSON'S simple DYES are most useful and effectual Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES. Beautiful effects are thus produced in green, pink, brown, and many other colours—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES.—Ferns, Grasses, Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c., by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed.

JUDSON'S DYES.—Ink—Ink—Ink.—A Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water.

JUDSON'S DYES.—For Colouring Architectural Plans, &c —Much trouble may be saved in grinding up colours to a uniform tint. They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades.

JUDSON'S DYES.—For Staining Wood.—Diluted with Water. They sink deeply into the fibre, and will not rub off. They form the most economical stain on record. Light Brown for mahogany colour is excellent, No. 2 Black for walnut, Canary for satin; also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE,

Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

Price 14s., with Woodcuts.

ETRUSCAN RESEARCHES. By Isaac TAYLOR, M.A. With Glossary and Index.

CONTENTS:—The Prologue—Tyrrhenians and Turanians—Ethnographical Notes on the Etruscan People—The Etruscan Mythology—The Etruscan Numerals—Epitaphs—Words denoting Kinship—The Bilingual Inscriptions—Forms of Dedication—The Ancient Vocabularies—Names—The Epilogue.

London: MACMILLAN & CO.

CLARENDON PRESS PUBLICATIONS.

A TREATISE ON ELECTRICITY AND MAGNETISM. By J. CLERK MAXWELL, M.A F.R.S., Professor of Experimental Physics in the University of Cambridge. 2 vols. 8vo, £1 11s. 6d.

The GEOLOGY of the VALLEY of the THAMES. By JOHN PHILLIPS, M.A. F.R.S., Professor of Geology in the University of Oxford. With Coloured Map and numerous Illustrations. 8vo, 21s.

"It does not often fall to our lot to open a book devoted to Science, and to derive from it the large amount of pleasure, and at the same time of real instruction, which we have found in the pages of this volume."—*Athenæum.*

VESUVIUS. By John Phillips, M.A., F.R.S. With numerous Maps and Illustrations. Crown 8vo, 10s. 6d.

"Professor Phillips has undertaken to give an authentic history of Vesuvius from the days of Crassus to the end of 1868, and to explain the phenomena of the burning mountain according to the laws of a rigid induction. His plan has been successfully carried out, and has resulted in a work of high value."—*Pall Mall Gazette.*

DESCRIPTIVE ASTRONOMY. A Handbook for the General Reader, and also for practical Observatory work. With 224 Illustrations and numerous Tables By G F CHAMBERS, F.R.A.S, Barrister-at-Law. Demy 8vo, cloth, 856 pp., price 21s.

CHEMISTRY FOR STUDENTS. By A. W. WILLIAMSON, Phil. Doc. F.R.S., Professor of Chemistry, University College, London. New Edition, with Solutions. Extra fcap. 8vo, cloth, price 8s. 6d.

EXERCISES IN PRACTICAL CHEMISTRY. By A. G VERNON HARCOURT, M.A. F.R.S, Senior Student of Christ Church, and Lee's Reader in Chemistry; and H. G. MADAN, M.A, Fellow of Queen's College, Oxford Series I, Qualitative Exercises. Second Edition. Crown 8vo, price 7s. 6d.

AN ELEMENTARY TREATISE ON HEAT. By BALFOUR STEWART, LL.D F.R.S., Professor of Natural History in Owens College, Manchester. Ext. fcap 8vo, with numerous Woodcuts and Diagrams, 7s. 6d. New Edition, revised and enlarged.

"The publication of this manual is exceedingly well-timed, it includes within narrow limits the leading facts and principles of this younger-born of the Sciences, and for the mastery of the greater portion of the contents only requires ordinary intelligence on the part of the reader."—*Spectator.*

FORMS OF ANIMAL LIFE. Being Outlines of Zoological Classification based upon Anatomical Investigation, and illustrated by Descriptions and Specimens and of Figures. By G. ROLLESTON, M.D. F.R.S., Linacre Professor of Physiology, Oxford. Demy 8vo, price 16s.

A TREATISE on ACOUSTICS. By W. J. DONKIN, F.R.S, Savilian Professor of Astronomy in the University of Oxford. Crown 8vo, price 7s. 6d.

A SYSTEM OF PHYSICAL EDUCATION: Theoretical and Practical. With 346 Illustrations drawn by A. MACDONALD, of the Oxford School of Art. By ARCHIBALD MACLAREN, The Gymnasium, Oxford. Ext. fcap 8vo, price 7s. 6d.

"The work before us is one which should be in the hands of every schoolmaster and schoolmistress. It is marked in every line by good sense, and is so clearly written that no one can mistake its rules"—*Lancet.*

ELEMENTS OF NATURAL PHILOSOPHY. By Sir W. THOMSON, LL.D. D.C.L. F.R.S, Professor of Natural Philosophy, Glasgow; and P. G. TAIT, M.A., Professor of Natural Philosophy, Edinburgh. Part I, 8vo, 9s.

Oxford: Printed at the Clarendon Press, and Published by MACMILLAN & CO., London, Publishers to the University.

HEALTH FOR ALL.

PRESTON'S PURIFYING PILLS.—The BLOOD MEDICINE. Sold in boxes at 7½d., 1s. 1½d., and 2s. 9d. Sent free on receipt of 8, 14, or 33 stamps.

This fine BLOOD Medicine is warranted not to contain a single particle of MERCURY, or any other Mineral, but to consist entirely of Medicinal Balsams PURELY VEGETABLE. One trial will convince anyone of their efficacy in all diseases of the Head, Chest, Heart, Lungs, Kidneys, Liver, Bowels, and likewise in Skin Diseases. These Pills create new, rich, and pure blood, and expel all impurities. They give IMMEDIATE relief, and very quickly cure, as a single box will prove.

They strengthen the constitution, improve the health, and greatly prolong life.

There is considerable saving in buying the larger boxes, as a 2s. 9d. box contains 100 pills.

As a family medicine they are greatly to be preferred, as they do not act upon the bowels, and are not in the slightest degree opening.

Prepared only by THOMAS PRESTON, M.B., at the City Medical Hall, 84, Long Lane, Smithfield, London.

\ₓ The Government Stamp is on every box.

LUNG HEALER,

FOR DISEASES OF THE CHEST, THROAT, AND LUNGS.

PRESTON'S LUNG HEALER is a fine Balsamic Elixir which acts direct upon the Lungs, giving immediate relief, and eventually a permanent and lasting cure, even in cases where everything else has been tried and failed.

LUNG HEALER quickly cures Coughs, Colds, Asthma, Tightness or Wheezing at the Chest, difficulty of Breathing, Hoarseness, Phlegm, Tickling of the Throat, Shortness of Breath, Incipient Decline, Numbness and Weakness of the Lungs, Pains in the Chest, and Wasting Influenza, Hectic Fever, Night Sweats, Decay of the Lungs, Tubercular Disease, Expectoration, Palpitation and all the symptoms of Impending Consumption.

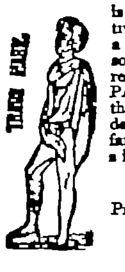
LUNG HEALER strengthens the Lungs and thereby prevents Consumption. The Voice improves; Coughs and Colds are guarded against. It thoroughly eradicates hereditary consumptive taint if taken in time, and all who may be threatened with decline may rest in safety after a few doses of LUNG HEALER.

Sold in bottles at 2s. 9d. by THOMAS PRESTON, M.B., at the City Medical Hall, 84, Long Lane, Smithfield, London. The Government Stamp is on every bottle.

\ₓ Order of any Chemist.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS



is allowed by upwards of 500 Medical Men to be the most effective invention in the curative treatment of Hernia. The use of a steel spring, so often hurtful in its effects, is here avoided; a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, 2 inches below the hips, being sent to the manufacturer,

JOHN WHITE, 228, Piccadilly.

Price of a Single Truss, 16s, 21s., 26s. 6d., and 31s. 6d. } Post-free.
„ Double „ 31s. 6d, 42s., and 52s. 6d.
„ Umbilical „ 42s and 52s. 6d.

ELASTIC STOCKINGS, KNEE-CAPS,

&c., for Varicose Veins and all cases of weakness and Swellings of the Legs, Sprains, &c. They are porous, light in texture, and inexpensive, and drawn on over an ordinary stocking. Price 4s. 6d., 7s. 6d., 10s., and 16s. each. Postage free.

JOHN WHITE, Manufacturer, 228, Piccadilly, London.

SUB-WEALDEN EXPLORATION

At Netherfield, near Battle.

The object of this work, commenced on the occasion of the meeting of the British Association at Brighton in 1872, is to ascertain the thickness of the Secondary Strata in the Wealden area, and the depth and nature of the underlying Palæozoic Formations.

The determination of the underground structure of the Wealden, is a point of great scientific interest, and one of *great national and economical importance*, as it may help to indicate the line taken underground by the coal-measures of Belgium and Somerset.

A sum of £3,000 has been collected by private subscription, and spent in this research, and a depth of 1,000 ft reached, but as yet without any positive result. The beds traversed belong to the Lower Wealden, Purbeck and Portland series, Kimmeridge clay, and the boring has now reached the Oxford clay.

It is most desirable that the work should not be discontinued in the present stage for want of funds, and the Committee therefore make an earnest appeal for further assistance.

Subscriptions may be sent to HENRY WILLETT, Esq., Hon. Sec. and Treasurer, Arnold House, Brighton.

Signed, on behalf of the Committee,

ANDREW RAMSAY,
JOHN EVANS,
JOSEPH PRESTWICH.

C WILLMORE, Principal.

TWO COURSES of LECTURES on GEOLOGICAL MINERALOGY

will be given at King's College, London, by Professor TENNANT, to which the Public are admitted on paying the College Fees One Course is given on Wednesday and Friday Mornings, from Nine to Ten o'clock, commencing WEDNESDAY, October 7th, and terminating at Easter, 1875 The other Course is given on Thursday Evenings from Eight to Nine, commencing October 8th The Lectures are illustrated by a very extensive Collection of Specimens.

PRACTICAL INSTRUCTION in MINERALOGY and GEOLOGY is given by Professor TENNANT, F G.S , at his residence, 149, Strand, W.C.

KING'S COLLEGE, LONDON.

EVENING CLASS DEPARTMENT.

The following Courses of Lectures on PHYSICS and CHEMISTRY will commence on October 5th, and close towards the end of March.

Fee for each Course, £1 11s 6d

MECHANICS, HYDROSTATICS, and PNEUMATICS, Monday and Thursday, 6 to 7 p m —H. Tomlinson, B A.

LIGHT and SOUND, Wednesday, 7 to 8 p.m —Prof W. G. Adams, F.R S.

THEORETICAL CHEMISTRY, Monday and Thursday, 7 to 8 p.m.—W. N Hartley, F.C S.

The Laboratories will be open for

HEAT and ELECTRICITY, Prof. W. G. Adams, F R S , Friday, 7 to 8 30 p m — Fee, £3 3s.

ANALYTICAL CHEMISTRY, W. N. Hartley, F.C.S., Tuesday, 7 to 9 p m — Fee, £2 2s

KING'S COLLEGE.

GEOLOGY —EVENING CLASSES.

A Course of Thirty Lectures on GEOLOGY and PALÆONTOLOGY will be given by the Rev. THOS. WILTSHIRE, M A F G S , on Monday Evenings, commencing October 5. There will be, in addition, two or more Field Lectures in the neighbourhood of London on Saturday Afternoons in the Lent Term, and an Excursion of two or three days' duration at a distance from London in the Easter Term.

For additional information apply to the Secretary, King's College, Strand, London.

EVENING SCIENCE LECTURES.—

PHYSICAL GEOGRAPHY AND GEOLOGY.—Mr H FISHER, F G.S , will deliver, at the Birkbeck Institution, Southampton Buildings, Chancery Lane, a Course of Thirty Lectures on each of the above subjects, on THURSDAY EVENINGS at 7 and 8 o'clock respectively, commencing October 1st. Fee for the Two Courses, *7s. 6d.* ; a Single Course, *5s* —For further particulars apply to Secretary.

EVENING SCIENCE LECTURES.—Mr.

W. J WILSON, F.C S F P S. (Demonstrator of Practical Physics at South Kensington), will commence the following Courses of Lectures in the Theatre of the Birkbeck Institution, Southampton Buildings, W C , on October 1st and 2nd .—

Acoustics, Light, and Heat, 30 Lectures, on Thursdays, at 8 p m.
Electricity and Magnetism, 30 Lectures, on Fridays, at 8 p m.

Fee for one Course, *5s* , for the two, *7s 6d* For detailed Syllabus, particulars of Special Prizes, &c , apply to the Librarian.

At the Class Examinations of the Science and Art Department, May 1874, 130 Papers in Physics were worked by Mr Wilson's Pupils. Of these, 87 passed First Class and obtained Queen's Prizes , 41 passed Second Class, and two failed. In 1873, 68 Papers worked: 45 First Class, 23 Second Class, and *none failed*.

PRELIMINARY EXAMINATIONS of the

COLLEGE of SURGEONS and APOTHECARIES' HALL —Mr J ERLE BENHAM (formerly of King's College, London, author of several works), who has compiled, expressly for his own Pupils, Guides to the above, containing upwards of 400 questions and answers on all the subjects of examination, has CLASSES READING at his residence at Hampstead (where he receives a few resident Pupils) and in the Temple, for these Examinations For references to Noblemen, Members of Parliament, Doctors of eminence, Queen's Counsel, &c , address to 3, Pump Court, Temple, or to the care of Messrs Butterworth, 7, Fleet Street, her Majesty's Publishers.

THE LONDON HOSPITAL AND MEDICAL COLLEGE.

The next WINTER SESSION will commence on THURSDAY, Oct 1st, 1874, when the Introductory Lecture will be given at 3 p.m by SAMUEL FENWICK, M.D, Assistant Physician to the Hospital.

General Fee to Lectures, with two years' Practical Anatomy, and Hospital Practice, 90 guineas, payable in two instalments of 45 guineas each. Library Fee, £1 1s. Special entries can be made to Lectures or Practice.

The Hospital contains 600 beds. There are Medical and Surgical Wards for Children, Wards for Syphilis, Special Departments for Diseases of Women, Diseases of the Eye, Diseases of the Ear, Diseases of the Skin, and special arrangements for Diseases of the Throat. A Maternity Department exists for the delivery of lying-in women at their own homes. 586 cases were attended last year by the Students of the Hospital.

For instruction in Mental Diseases, Students can attend without further fee the practice of Dr. John Millar, Superintendent of Bethnal House Asylum, a few minutes' walk from the Hospital.

Clinical Lectures, both Medical and Surgical, will be given every week, and practical instructions imparted in all the departments.

The In-patients during 1873 were 5,613, and the Out-patients 43,808, total, 49,421.

At the Medical College, which has been enlarged, Lectures will be given on all the subjects required by the Examining Boards.

Members of the Staff and Lecturers at the College.

Mr. J. Luke, F.R.S.
Mr John Adams
Mr. Curling, F.R.S
Dr. Herbert Davies
Dr Andrew Clark
Dr. Ramskill
Dr. Langdon Down
Dr Hughlings-Jackson
Dr Sutton
Dr Fenwick
Dr. Woodman
Dr. Stephen Mackenzie
Dr. A. E. Sansom
Mr Jonathan Hutchinson
Mr Maunder
Mr. Couper
Mr. Walter Rivington
Mr Jas Adams
Mr Waren Tay
Mr. McCarthy
Mr. Reeves
Dr. Head
Dr. Palfrey
Mr H J Barrett
Mr A. W Barrett
Dr. Letheby
Dr. Meymott Tidy
Dr. Prosser James
Dr Morell-Mackenzie
Mr. J E D. Rogers
Mr. Gilbert Baker

The following Prizes and Appointments are open without any further payment to Students paying the general fee of 90 guineas:—

Seven Scholarships, to be offered for competition in the Winter Session:

1. A Scholarship of £30 to the Student of less than three months' standing who passes in October the best examination in the subjects required at the Preliminary Examination.
2. A Scholarship of £20 to the Student of less than three months' standing placed second in the above examination.
3. A Scholarship of £20 in Human Anatomy for first-year Students; to be awarded in April 1875
4. A Scholarship, value £25, in Anatomy, Physiology, and Chemistry, for first-year and second-year Students; to be awarded in April 1875.
5. A Hospital Scholarship, value £20, for Clinical Medicine; to be awarded in April 1875.
6. A Hospital Scholarship, value £20, for Clinical Surgery; to be awarded in April 1875.
7. A Hospital Scholarship, value £20, for Clinical Obstetrics, to be awarded in April 1875; and a Prize of £5 to the Student who has attended most Midwifery Cases for the Hospital during the preceding twelve months.

The Duckworth Nelson Prize, value £10, for Practical Medicine and Surgery (Biennial), 1875

Money Prizes to the value of £60 given annually by the House Committee for zeal in Dressing Out-patients and knowledge of Minor Surgery

Certificates of Honour in all the Classes according to the results of the General Examinations at the end of the Session, and Special Certificates to those who have filled with credit the duties of the Hospital Appointments.

Four House-Surgeoncies, tenable for three or six months, and Dresserships to In-patients, open to all.

Dresserships to Out-patients, with the privilege of competing for the Prizes above mentioned.

The office of the Resident Medical Officer, tenable for two years, with a salary of £75 the first year, and £100 the second year.

The Office of Junior Resident Medical Officer, tenable for six months

Four Medical Assistantships, held for three months, with residence and board in the Hospital for three weeks.

The office of Resident Accoucheur, tenable for six months.

N B.—The holders of all the resident offices are provided with rooms and board free of expense.

Four offices of Clinical Assistants in the Out-patients' Department, each at a salary of £40

The office of Medical Registrar, salary 25 guineas.

The office of Surgical Registrar, salary 35 guineas

Prosectors of Anatomy, Ward Clerks, and Post mortem Clerks.

A Prospectus, giving details, will be forwarded on application to the Bedell of the London Hospital Medical College, Turner Street, E.

Further information may also be obtained from Mr. James E. Adams, Treasurer, 10, Finsbury Circus, E.C., or Mr. Waren Tay, Vice-Dean, at the Medical College.

ROYAL COUNCIL OF EDUCATION.—The Laboratory and Class-rooms of Berners College are open to Pupils EVERY DAY and EVENING. The subjects of the above Exhibitions can be studied either Privately or in Classes. Fees moderate. Analyses and Investigations conducted.—Apply to Prof. E. V. GARDNER, F.E.S., F.S.A., 44, Berners Street, W.

MATRICULATION EXAMINATION, LOND. UNIV., January 1875.

F. A. HANBURY, M.A., Wrangler and late Senior Scholar of his College, READS WITH PUPILS for this Exam. He is assisted by efficient Lecturers in French, Chemistry, and Classics, and has been particularly successful for this Exam., having passed fifty-seven Pupils, to whom reference can be given. Two of these passed in the Honours list in January 1873, seventh and fourteenth respectively. A Class will commence early in September, and another early in October. Fees for the two, £14 and £10 10s respectively. For further particulars, address 24, Old Square, Lincoln's Inn, W C.—A few Residents can be accommodated in Mr. Hanbury's house at Clapham

PRELIMINARY EXAMINATION IN ARTS, ROYAL COLL. SURG., December 1874.

F. A. HANBURY, M.A., Wrangler and late Senior Scholar of his College, PREPARES PUPILS for this Exam. He is assisted by efficient Lecturers in French and Chemistry, and has passed several Pupils for this Exam., to whom reference can be given. Terms from 8 to 12 Guineas, according to subjects taken up and time of joining the class. For further particulars, address, 24, Old Square, Lincoln's Inn, W.C.

TUITION in CLASSICS, ENGLISH LANGUAGE, HISTORY, and LITERATURE.—An experienced Tutor attends Schools and Families, in London or the Country, to teach the above Subjects. Prepares for the Public Schools, Universities, and the Army.—Address TUTOR, 15, Gledhow Terrace, South Kensington, S.W.

Mr. C. H. LAKE (Graduate in Honours, London) receives a limited number of RESIDENT PUPILS. Testimonials from the late J. S. Mill, Dr. Tyndall, &c. Science receives careful attention.—Witherndon, Caterham, Surrey.

MATHEMATICS and SCIENCE.—Pupils prepared for Competitive and Pass Examinations by a High Wrangler and Nat. Science Man. Successful in Tuition. In the Country by Correspondence. Classes visited.—J F BLAKE, 6, Wells Road, Regent's Park, N W.

GEOLOGY.—ELEMENTARY COLLECTIONS to illustrate the New Edition of "Lyell's Students' Elements of Geology," and facilitate the important study of this science, can be had at 2, 5, 10, 20, 50, to 1,000 guineas. Also, Single Specimens of Rocks, Minerals, Fossils, and Recent Shells. Geological Maps, Hammers, all the Recent Publications, &c., of J TENNANT, Mineralogist to Her Majesty, 149, Strand, London.

Practical Instruction is given in Geology and Mineralogy by Professor TENNANT, F.R.G.S., at his residence, 149, Strand, W C.

MINERALS and ROCKS, Classified after Miller, Dana, and Rose. 100 Examples, 21s., 200 ditto, £2 10s. to £3 10s.; 300 ditto, £4 10s. to £6; 400 ditto, £6 to £8, 500 ditto, £8 8s. to £10 10s. Including Half Fossils, 250 Examples, £3 10s 6d.; 400 ditto, £6. 150 FOSSILS illustrating Morris's Chart or Lyell's Manual, 30s.; 250 ditto (mostly of the species figured), £3; 350 ditto, £5 to £6. RECENT SHELLS: 100 genera, £1, 200 ditto, £2 10s.

ALFRED BELL, 5, Grafton Street, Fitzroy Square, London.

To GEOLOGISTS.—GEOLOGICAL MAP of YORKSHIRE. By WM SMITH. Good condition. Scale, 4 miles to an inch. Price £5.—Apply to ALPHA, 31, Oakfield Road, Everton, Liverpool.

To SCIENTIFIC COLLECTORS and OTHERS.—A MEDICAL MAN retiring from practice has for disposal FOUR CASES, all of the best Spanish mahogany, French polished, with glass folding doors. Three, each 7 ft 6 in (in three heights) by 3 ft., with shelves for bottles, and one, 7 ft 6 in. (in two heights) by 6 ft 3 in, the upper height containing 300 small drawers, 3½ by 3 by 7 in, the lower part having shelves with large drawers. All the drawers are of oak, dovetailed, with Spanish mahogany fronts.—Apply at 14, Church Row, Limehouse.

CLINICAL MEDICINE,

Lectures and Essays.

By BALTHAZAR FOSTER, M.D. F.R.C.P.,

Professor of Medicine in Queen's College, Physician to the General Hospital, Birmingham.

"The book may be taken up with advantage and profit, read with confidence as to its genuineness, and laid down with a feeling of admiration of the author's appreciation of clinical facts, and his facile and reasonable method of putting them."—*British Medical Journal.*

J. & A. CHURCHILL, New Burlington Street.

SCIENCE PRIMERS IN PREPARATION.

INTRODUCTORY. By Professor Huxley, F.R.S.

BOTANY. By J. D. Hooker, C.B. F.R.S., President of the Royal Society.

ASTRONOMY. By J. Norman Lockyer, F.R.S.

MACMILLAN & CO., LONDON.

Nearly ready, in 8vo, cloth.

INAUGURAL ADDRESS to the British Association for the Advancement of Science, at Belfast, August 19, 1874. By JOHN TYNDALL, President.

London: LONGMANS & CO.

NOTICE.—To Science Classes.—MOTTERSHEAD AND CO., LABORATORY FURNISHERS, EXCHANGE STREET, MANCHESTER, supply all the Apparatus enumerated in the SOUTH KENSINGTON LISTS FOR THE USE OF TEACHERS OF CHEMICAL OR PHYSICAL SCIENCE (including Light, Heat, Electricity, Magnetism, &c.), and will be happy to show intending purchasers specimens of the various Instruments, or to forward Estimates on application. Orders exceeding £2 in value delivered free to any railway station in England.

STONE IMPLEMENTS.—W. CUTTER has received instructions from an eminent Collector to offer for Sale a fine and extensive set of Danish War-hatchets, Knives, Chisels, Sword-handles, Balls, Hammers, &c. Some of these specimens are of rare types, and in the finest condition: may be viewed in the large Room, 35, Great Russell Street, from 10 to 4.

FINE COLLECTION of FOREIGN and BRITISH WOODS, consisting of 3,000 examples; about 2,000 are beautifully squared, others are large sections, stems, curious growths, Tree Ferns, &c. The whole form a Museum, and have taken a lifetime to accumulate. May be viewed from 10 till 4 in the large Room (which is always available for the display of Collections for sale)—W. CUTTER, Naturalists' Agent, 35, Great Russell Street, who is always ready to purchase or dispose of Minerals, Shells, Insects, &c. Human Skeletons, Skulls, &c., kept in stock.

DIARY OF SOCIETIES.

LONDON

FRIDAY, SEPTEMBER 25

QUEKETT MICROSCOPICAL CLUB, at 8.—On the Salivary Glands of the Cockroach. By T. Charters White, M.R.C.S.

TO SECRETARIES OF SCIENTIFIC AND LITERARY SOCIETIES.

It having been suggested that the publication of a weekly Diary in NATURE of the Meetings, &c. *of the various provincial* Scientific and Literary Societies *would be found very useful, not only to the Members of such Societies, but to all who are interested in scientific and literary subjects, the Publishers have determ[illegible] devote a portion of their Advertisement columns to this purpose, and to insert* NOTICES OF MEETINGS, SUBJECTS OF LECTURES, *&c., at the nominal charge of* One Shilling *for each insertion.*

The Publishers of NATURE *will be glad if the Secretaries of Societies will aid them in their endeavours to make this weekly Diary as complete and useful as possible. Notices intended for insertion therein must be sent, addressed to the* Publishers, *by* Wednesday Mornings.

OFFICE—29, BEDFORD STREET, STRAND.

EVERY THURSDAY, PRICE 4*d.*

"*NATURE.*"

CHARGES FOR ADVERTISEMENTS.

Three lines in column, 2s. 6d.; 9d. per line after.

ESTABLISHED 1843.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 500 Medical Men to be the most effective invention in the curative treatment of Hernia. The use of a steel spring, so often hurtful in its effects, is here avoided; a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, 2 inches below the hips, being sent to the manufacturer,

JOHN WHITE, 228, Piccadilly.

Price of a Single Truss, 16*s.*, 21*s.*, 26*s.* 6*d.*, and 31*s.* 6*d.*
" Double " 31*s.* 6*d.*, 42*s.*, and 52*s.* 6*d.*
" Umbilical " 42*s.* and 52*s.* 6*d.*
} Post-free.

ELASTIC STOCKINGS, KNEE-CAPS, &c., for Varicose Veins and all cases of weakness and Swellings of the Legs, Sprains, &c. They are porous, light in texture, and inexpensive, and drawn on over an ordinary stocking. Price 4*s.* 6*d.*, 7*s.* 6*d.*, 10*s.*, and 16*s.* each. Postage free.

JOHN WHITE, Manufacturer, 228, Piccadilly, London.

PURE AERATED WATERS.

ELLIS'S
RUTHIN WATERS,

Soda, Potass, Seltzer, Lemonade, Lithia, and for GOUT, Lithia and Potass.

CORKS BRANDED "R. ELLIS & SON, RUTHIN," and every Label bears their Trade Mark. Sold everywhere, and Wholesale of R. ELLIS & SON, Ruthin, North Wales.

LONDON AGENTS:—W. BEST & SONS, Henrietta Street, Cavendish Square.

NATURE.—Wanted clean Copies of Nos. 10, 13, and 116. NATURE Office, 29, Bedford Street, Strand, W.C.

"NATURE" SERIES.

A SERIES OF POPULAR SCIENTIFIC WORKS.

Vol. I.—The SPECTROSCOPE and its APPLICATIONS. By J. Norman Lockyer, F.R.S. With numerous Illustrations. Second Edition, crown 8vo, 3*s.* 6*d.*

"To any student who wishes to make himself, in a comparatively short time, well acquainted with the principles and the application of the spectroscope, we cannot recommend a better treatise."—*Westminster Review.*

Vol. II.—The ORIGIN and METAMORPHOSIS of INSECTS. By Sir John Lubbock, M.P. F.R.S. With numerous Illustrations. Second Edition, crown 8vo, 3*s.* 6*d.*

"We invite attention to the admirable manner in which the subject of insect metamorphosis is illustrated by excellent figures."—*Field.*

Vol. III.—The BIRTH of CHEMISTRY. By G. F. Rodwell, F.R.A.S. F.C.S., Science Master in Marlborough College. With numerous Illustrations. Crown 8vo, 3*s.* 6*d.*

Mr. Rodwell's work is the product of scholarly investigation. Chemists cannot fail to enjoy it, and those who are not chemists will be tempted to enter on the study of its mysteries."—*Chemist and Druggist.*

"A thoughtful, suggestive, and decidedly readable work."—*Quarterly Journal of Science.*

The TRANSIT of VENUS. By George Forbes, B.A., Professor of Natural Philosophy in the Andersonian University, Glasgow. With numerous Illustrations. Crown 8vo, 3*s.* 6*d.*

To be shortly published.

POLARISATION of LIGHT. By W. Spottiswoode, LL.D. F.R.S. With numerous Illustrations. Crown 8vo.

The COMMON FROG. By St. George Mivart, F.R.S., Lecturer on Comparative Anatomy at St. Mary's Hospital. With numerous Illustrations. Crown 8vo.

On BRITISH WILD FLOWERS, considered in RELATION to INSECTS. By Sir JOHN LUBBOCK, M.P. F.R.S. With numerous Illustrations. Crown 8vo.

MACMILLAN & CO., LONDON.

JUDSON'S DYES.—18 Colours, 6d. each.

RIBBONS, WOOL, SILK, FEATHERS,

Completely dyed in 10 minutes without soiling the hands.

Full Instructions supplied. Of all Chemists and Stationers.

JUDSON'S DYES.—Dyeing at Home.—JUDSON'S simple DYES are most useful and effectual. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES. Beautiful effects are thus produced in green, pink, brown, and many other colours—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES.—Ferns, Grasses, Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c., by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed.

JUDSON'S DYES.—Ink—Ink—Ink.—A Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water.

JUDSON'S DYES.—For Colouring Architectural Plans, &c.—Much trouble may be saved in grinding up colours to a uniform tint. They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades.

JUDSON'S DYES.—For Staining Wood.—Diluted with Water. They sink deeply into the fibre, and will not rub off. They form the most economical stain on record. Light Brown for mahogany colour is excellent; No. 2 Black for walnut; Canary for satin; also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE,

Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

INTERNATIONAL EXHIBITION PRIZE MEDAL AWARDS,

London, 1851. Paris, 1855. London, 1862. Vienna, 1873.

ILLUSTRATED DESCRIPTIVE CATALOGUE MAY BE HAD ON APPLICATION TO:

88, New Bond Street, W., London.

HOLLOWAY'S PILLS and OINTMENT.—Deranged Stomach.—Sick Headache.—Our comfort, happiness, and security depend on the knowledge that most diseases originate by apparently a trifling beginning; and the large proportion of them spring from inattention to the state of the stomach. Professor Holloway has turned this knowledge to useful account by discovering medicines which rectify the error as soon as it is seen, and save the system from loss of appetite, strength, and energy, which are, without exception, the attendants on disordered digestion. They ward off likewise the torturing sick headache. The Ointment should be well rubbed twice daily over the stomach, liver, and bowels; to them it penetrates, and upon them it immediately exerts its renovating influence.

MACMILLAN & CO, London.

HEALTH FOR ALL.

PRESTON'S PURIFYING PILLS.—The BLOOD MEDICINE. Sold in boxes at 7½*d*., 1*s*. 1½*d*., and 2*s*. 9*d*. Sent free on receipt of 8, 14, or 33 stamps.

This fine BLOOD Medicine is warranted not to contain a single particle of MERCURY, or any other Mineral, but to consist entirely of Medicinal Balsams PURELY VEGETABLE. One trial will convince anyone of their efficacy in all diseases of the Head, Chest, Heart, Lungs, Kidneys, Liver, Bowels, and likewise in Skin Diseases. These Pills create new, rich, and pure blood, and expel all impurities. They give IMMEDIATE relief, and very quickly cure, as a single box will prove.

They strengthen the constitution, improve the health, and greatly prolong life.

There is considerable saving in buying the larger boxes, as a 2*s*. 9*d*. box contains 100 pills.

As a family medicine they are greatly to be preferred, as they do not act upon the bowels, and are not in the slightest degree opening.

Prepared only by THOMAS PRESTON, M.B., at the City Medical Hall, 84, Long Lane, Smithfield, London.

⁂ The Government Stamp is on every box.

LUNG HEALER,

FOR DISEASES OF THE CHEST, THROAT, AND LUNGS.

PRESTON'S LUNG HEALER is a fine Balsamic Elixir which acts direct upon the Lungs, giving immediate relief, and eventually a permanent and lasting cure, even in cases where everything else has been tried and failed.

LUNG HEALER quickly cures Coughs, Colds, Asthma, Tightness or Wheezing at the Chest, difficulty of Breathing, Hoarseness, Phlegm, Tickling of the Throat, Shortness of Breath, Incipient Decline, Numbness and Weakness of the Lungs, Pains in the Chest, and Wasting Influenza, Hectic Fever, Night Sweats, Decay of the Lungs, Tubercular Disease, Expectoration, Palpitation and all the symptoms of Impending Consumption.

LUNG HEALER strengthens the Lungs and thereby prevents Consumption. The Voice improves; Coughs and Colds are guarded against. It thoroughly eradicates hereditary consumptive taint if taken in time, and all who may be threatened with decline may rest in safety after a few doses of LUNG HEALER.

Sold in bottles at 2*s*. 9*d*. by THOMAS PRESTON, M.B, at the City Medical Hall, 84, Long Lane, Smithfield, London. The Government Stamp is on every bottle.

⁂ Order of any Chemist.

SECURITY FROM FIRE AND THIEVES.

CHATWOOD'S "INVINCIBLE" SAFES

CAN ONLY BE HAD IN LONDON, AT THE DEPÔT,

120, CANNON STREET, E.C.

Chatwood's "Invincible" Safe Depôt is situate near King William's Statue, at the corner of Cannon Street and King William Street. A Price List containing full details of the construction of these Safes is forwarded post-free on application to SCOTT AND LIDDELL, Sole Agents. The list is Net Cash, and for quality cannot be equalled, comprising, as they do, the list 2 quality with solid flange, lock case, and the frame, and the list 8 quality with intersected metal; curvilinear edge, claw bolts, and gunpowder-proof unpickable lock. The only secure and reliable Safes sold, and, as proof thereof, is the only Safe made subject to Thirty-six hours' test with any kind of burglars' appliances before delivery.

Geology and Mining—Professor A Green, M.A. F.G.S., late Fellow of Gonville and Caius College, Cambridge. Fee, £4 4s per session.

Textile Industries—Professor William Walker (Endowed by the Cloth workers' Company, London). Fees: Course A, £10 10s; Course B, £5 5s

The arrangement for Evening Classes will be announced hereafter

Prospectuses of the Courses of Lectures are now ready, and may be had by written application to the Secretary.

J. D HEATON, Chairman.
Sept. 24, 1874 HENRY H. SALES, Secretary.

STATISTICAL SOCIETY.

NOTICE is Hereby Given, that the STATISTICAL SOCIETY has changed its quarters, and that from this date—the 20th September, 1874—its address is SOMERSET HOUSE TERRACE (King's College Entrance), STRAND, W.C., LONDON.

ST. MARY'S HOSPITAL MEDICAL SCHOOL.

THREE OPEN SCHOLARSHIPS and TWO EXHIBITIONS, October 1874.

For particulars apply to the Dean, St. Mary's Hospital, Paddington, W.

KING'S COLLEGE.

GEOLOGY.—EVENING CLASSES

A Course of Thirty Lectures on GEOLOGY and PALÆONTOLOGY will be given by the Rev. THOS WILTSHIRE, M A. F G S, on Monday Evenings, commencing October 5. There will be, in addition, two or more Field Lectures in the neighbourhood of London on Saturday Afternoons in the Lent Term, and an Excursion of two or three days' duration at a distance from London in the Easter Term.

For additional information apply to the Secretary, King's College, Strand, London.

LONDON LIBRARY,

12, ST. JAMES'S SQUARE.—Founded in 1841.

Patron—H.R.H. The Prince of Wales.

President—Thomas Carlyle, Esq.

This Library contains 90,000 Volumes of Ancient and Modern Literature, in various Languages Subscription, £3 a year, or £2 with Entrance Fee of £6; Life Membership, £26.

Fifteen Volumes are allowed to Country, and Ten to Town Members Reading Room open from Ten to half-past Six. Prospectus on application. Catalogue, New Edition, in the press.

ROBERT HARRISON, Secretary and Librarian.

TWO COURSES of LECTURES on GEOLOGICAL MINERALOGY

will be given at King's College, London, by Professor TENNANT, to which the Public are admitted on paying the College Fees. One Course is given on Wednesday and Friday Mornings, from Nine to Ten o'clock, commencing WEDNESDAY, October 7th, and terminating at Easter, 1875 The other Course is given on Thursday Evenings from Eight to Nine, commencing October 8th. The Lectures are illustrated by a very extensive Collection of Specimens.

PRACTICAL INSTRUCTION in MINERALOGY and GEOLOGY is given by Professor TENNANT, F.G S., at his residence, 149, Strand, W.C

QUEENWOOD COLLEGE, near STOCKBRIDGE, HANTS.

Sound General Education for Boys

Special attention to Science, particularly to Chemistry, both theoretical and practical.

References to Dr. Debus, F.R.S.; Dr. Frankland, F R.S.; Dr. Roscoe, F R S; Dr Angus Smith, F.R.S., Dr. Tyndall, F.R.S.; Dr Voelcker, F R S., Dr. Williamson, F.R.S.

C. WILLMORE, Principal.

ROYAL COUNCIL OF EDUCATION.—

The Laboratory and Class-rooms of Berners College are open for Pupils EVERY DAY and EVENING. The subjects of the above Examinations can be studied either Privately or in Classes. Fees moderate Analyses and investigations conducted.—Apply to Prof. E. V. Gardner, F.E.S., F.S.A., 44, Berners Street, W.

MEDICAL EDUCATION of WOMEN.—

A MEDICAL SCHOOL for WOMEN will be Opened in London on October 12th.—All particulars can be obtained from the Secretary, Miss Heaton, 30, Henrietta Street, Brunswick Square, W C.

Mr. C. H. LAKE (Graduate in Honours,

London) receives a limited number of RESIDENT PUPILS. Testimonials from the late J. S. Mill, Dr Tyndall, &c. Science receives careful attention.—Witherndon, Caterham, Surrey.

MATRICULATION EXAMINATION, LOND. UNIV., January 1875

F. A. HANBURY, M.A., Wrangler and late Senior Scholar of his College, READS WITH PUPILS for this Exam. He is assisted by efficient Lecturers in French, Chemistry, and Classics, and has been particularly successful for this Exam., having passed fifty-seven Pupils, to whom reference can be given. Two of these passed in the Honours list in January 1873, seventh and fourteenth respectively. A Class will commence early in September, and another early in October. Fees for the two, £14 and £10 10s. respectively. For further particulars, address 24, Old Square, Lincoln's Inn, W.C.—A few Residents can be accommodated in Mr. Hanbury's house at Clapham.

PRELIMINARY EXAMINATION IN ARTS, ROYAL COLL. SURG., December 1874.

F. A. HANBURY, M.A., Wrangler and late Senior Scholar of his College, PREPARES PUPILS for this Exam. He is assisted by efficient Lecturers in French and Chemistry, and has passed several Pupils for this Exam., to whom reference can be given. Terms from 8 to 12 Guineas, according to subjects taken up and time of joining the class. For further particulars, address 24, Old Square, Lincoln's Inn, W.C.

EVENING SCIENCE LECTURES.—Mr. W. J. WILSON, F.C.S., F.P.S. (Demonstrator of Practical Physics at South Kensington), will commence the following Courses of Lectures in the Theatre of the Birkbeck Institution, Southampton Buildings, W.C., on October 1st and 2nd:—

Acoustics, Light, and Heat, 30 Lectures, on Thursdays, at 8 p.m.
Electricity and Magnetism, 30 Lectures, on Fridays, at 8 p.m.

Fee for one Course, 5s.; for the two, 7s. 6d. For detailed Syllabus, particulars of Special Prizes, &c., apply to the Librarian.

At the Class Examinations of the Science and Art Department, May 1874, 130 Papers in Physics were worked by Mr. Wilson's Pupils, with the following results:—One Studentship in Physics at South Kensington, one Silver Medal, one Bronze Medal, 87 First Class Certificates with Queen's Prizes, 41 Second Class, two failed. In May 1873, 68 Papers worked: 45 First Class, 23 Second Class, and *none failed*.

MATHEMATICS and SCIENCE.—Pupils prepared for Competitive and Pass Examinations by a High Wrangler and Nat. Science Man. Successful in Tuition. In the Country by Correspondence. Classes visited.—J. F. BLAKE, 6, Wells Road, Regent's Park, N.W.

PRELIMINARY EXAMINATIONS of the COLLEGE of SURGEONS and APOTHECARIES' HALL.—Mr. J. ERLE BENHAM (formerly of King's College, London, author of several works), who has compiled, expressly for his own Pupils, Guides to the above, containing upwards of 400 questions and answers on all the subjects of examination, has CLASSES READING at his residence at Hampstead (where he receives a few resident Pupils) and in the Temple, for these Examinations. For references to Noblemen, Members of Parliament, Doctors of eminence, Queen's Counsel, &c., address to 3, Pump Court, Temple, or to the care of Messrs. Butterworth, 7, Fleet Street, her Majesty's Publishers.

SCIENCE TUITION by CORRESPONDENCE.—For terms, apply to D. C. L., care of Macmillan and Co., 29, Bedford Street, Strand, London, W.C.

PRIVATE TUITION.—A Clergyman of long experience and uniform success in Tuition, RECEIVES FOUR PUPILS. Home comforts combined with great educational advantages. The highest references.—M. A., care of Editor of NATURE, 29, Bedford Street, Strand, W.C.

MICROSCOPE by Smith and Beck for Sale, with Sub-stage, three Eye-pieces, best Objectives, and a quantity of expensive accessories. The whole in Mahogany Cabinet, and cost £50. To be sold for £28.—Apply by letter to R. B., care of Macmillan and Co., 29, Bedford Street, Covent Garden, W.C.

A LADY requires a RE-APPOINTMENT. German, French, the Elements of Natural Science, together with all the usual branches of Education. Highest references can be given.—Address, M. A. H., care of the Publishers of NATURE, 29, Bedford Street, Covent Garden, W.C.

MICROSCOPE for Sale, very Cheap. First-class Stand, with complete Mechanical Movements, A and C Eye-pieces, 1, ½, ¼ (adjusting) Objectives, &c. Upright Cabinet with drawers.—For price and other particulars apply by letter to J. B. D., care of the Publishers of NATURE.

SCIENTIFIC LECTURES.—A Gentleman who is a M.A., will be glad to make arrangements for Lecturing on Scientific Subjects to Schools, Institutes, &c.—Address for further particulars to S. E. P., care of Macmillan and Co., 29, Bedford Street, Strand, W.C.

SUNDEWS—DROSERA ROTUNDIFOLIA.—See NATURE for September 3, page 367. One Plant, 9d., or six strong in flower, or seed, 2s. 6d. Free by post.

A. W., Highampton, Devon.

GEOLOGY.—ELEMENTARY COLLECTIONS to illustrate the New Edition of "Lyell's Students' Elements of Geology," and facilitate the important study of this science, can be had at 2, 5, 10, 20, 50, to 1,000 guineas. Also, Single Specimens of Rocks, Minerals, Fossils, and Recent Shells. Geological Maps, Hammers, all the Recent Publications, &c., of J. TENNANT, Mineralogist to Her Majesty, 149, Strand, London.

Practical Instruction is given in Geology and Mineralogy by Professor TENNANT, F.R.G.S., at his residence, 149, Strand, W.C.

MINERALS and ROCKS, Classified after Miller, Dana, and Rose. 100 Examples, 25s.; 200 ditto, £2 10s. to £3 10s.; 300 ditto, £4 10s. to £6; 400 ditto, £6 to £8; 500 ditto, £8 8s. to £10 10s. Including Half Fossils, 250 Examples, £3 10s. 6d.; 400 ditto, £6. 150 FOSSILS illustrating Morris's Chart or Lyell's Manual, 30s.; 250 ditto (mostly of the species figured), £3; 350 ditto, £5 to £6. RECENT SHELLS: 100 genera, £1, 200 ditto, £2 10s.

ALFRED BELL, 5, Grafton Street, Fitzroy Square, London.

STONE IMPLEMENTS.—W. CUTTER has received instructions from an eminent Collector to offer for Sale a fine and extensive set of Danish War-hatchets, Knives, Chisels, Sword-handles, Balls, Hammers, &c. Some of these specimens are of rare types, and in the finest condition: may be viewed in the large Room, 35, Great Russell Street, from 10 to 4.

THOMAS D. RUSSELL,
GEOLOGIST & MICROSCOPIST,
48, ESSEX STREET, STRAND, W.C.
(Late of Arundel Street.)

British Rocks—100 Specimens ... ... One Guinea.
British Fossils—100 " ... ... One Guinea.

Collections and Specimens of
British Fossils from the Crag to the Silurian inclusive.

Detailed Catalogues post-free.

NOTICE.—To Science Classes.—MOT-TERSHEAD AND CO., LABORATORY FURNISHERS, EXCHANGE STREET, MANCHESTER, supply all the Apparatus enumerated in the SOUTH KENSINGTON LISTS FOR THE USE OF TEACHERS OF CHEMICAL OR PHYSICAL SCIENCE (including Light, Heat, Electricity, Magnetism, &c.), and will be happy to show intending purchasers specimens of the various Instruments, or to forward Estimates on application. Orders exceeding £2 in value delivered free to any railway station in England.

TRUSSES (Self-adjusting), in use for the last sixty years, and same as worn by his late Majesty William IV. From 10s. each. SALMON ODY & CO., by appointment to the Army and Navy, 292, Strand, London. Price List post free.

CHEST EXPANDER and TROUSERS BRACE combined, 8s.; Ladies' Chest Expanders from 5s. 6d.—SALMON ODY & CO., 292, Strand, London. Established 1806.

ELASTIC STOCKINGS for Varicose Veins or Weak Joints; and LADIES' ABDOMINAL BELTS, made to any size. Directions for self-measurement and prices post free. SALMON ODY & CO., 292, Strand, London.

TUITION in CLASSICS, ENGLISH LAN-GUAGE, HISTORY, and LITERATURE.—An experienced Tutor attends Schools and Families, in London or the Country, to teach the above Subjects. Prepares for the Public Schools, Universities, and the Army.—Address TUTOR, 15, Gledhow Terrace, South Kensington, S.W.

The REV. L. HENSLEY, Vicar of Hitchin, Herts, formerly Fellow and Assistant Tutor of Trinity College, Cambridge, receives several Pupils to prepare for the Universities and other examinations; and has now vacancies.

Price 2s. 6d., free by post for 2s. 10d.

THE NEW QUARTERLY MAGAZINE

FOR OCTOBER.

CONTENTS.

"Travels in Portugal" (Concluded.) By John Latouche.
"The Fauna of Fancy." By Frances Power Cobbe.
"A Sea Changeling." A Novel. By the Author of "Olive Varcoe"
"Spiritualism in England" By Nathaniel A Harness
"The Character of Goethe." By Robert Buchanan, Author of "White Rose and Red"
"Small Farms" By Richard Jefferies
"In the Rue Froide." A Tale. By Katharine S. Macquoid, Author of "Patty."

London: WARD, LOCK, & TYLER, Warwick House, Paternoster Row.

NEWMAN'S ENTOMOLOGIST:

A MONTHLY ILLUSTRATED JOURNAL OF BRITISH INSECTS

Conducted by EDWARD NEWMAN, F.L.S. F.Z.S. &c.,

Late President of the Entomological Society.

The objects of the *Entomologist* are to give every information about Insects; more especially to work out the history of those which attack Fruit and Forest Trees, Vegetables, Root and Seed Crops, Greenhouse and Garden Plants, with a view to suggesting remedies. Notes, Observations, and Queries on every branch of the Science are solicited To preserve a continuous record of the occurrence of rarities. To improve collections by offering a ready medium for the exchange of specimens.

Published on the First of every Month.

PRICE SIXPENCE.

SIMPKIN, MARSHALL, and Co., Stationers' Hall Court.

THE JOURNAL OF INDUSTRY:

An Illustrated Record of Manufactures, Inventions, and the Applied Arts and Sciences

6d. MONTHLY, or POST-FREE, 6s. 6d PER ANNUM.

The "Journal of Industry" is issued with the object of promoting the interests of British Manufacturers by—

The Collection of Valuable Information from all parts of the Industrial World.
The Discussion of Matters important to Manufacturers.
Descriptive Accounts of useful Patents and Inventions.
Reports and Correspondence on Science in its Relation to Industrial and Commercial Progress.

⁂ This Journal has now the Largest Circulation of any Publication of the kind in the World.

Published by WILLIAMS & COMPANY, 7, Bolt Court, Fleet Street, London.

MACMILLAN'S MAGAZINE.

No. 180 FOR OCTOBER.

PRICE 1s

CONTENTS.

1.—"Joseph Priestley." By Professor Huxley, F.R.S
2.—"Castle Daly: The Story of an Irish Home Thirty Years Ago." Chapters XXII.—XXIV.
3.—"Scholars and Friars: a Chapter in the History of Ecclesiastical Strife." By George L B. Wildig.
4.—"On Mr. Swinburne's 'Bothwell.'"
5.—"Lady Duff Gordon." A short Memoir, by her Daughter.
6.—"The Fool of Five Forks." A Tale By Bret Harte
7.—"The Poor Whites of India. A Few Words regarding them." By Sir Alexander Arbuthnot, K C S.I
8.—"Prussia and the Vatican." II. The Relations between Church and State in Prussia up to 1840
"Note to Article on 'Dies Iræ.'"

MACMILLAN & CO., London

On the 1st of every Month, pp. 32, 8vo, with at least One Plate,

THE JOURNAL OF BOTANY,

BRITISH AND FOREIGN,

Edited by HENRY TRIMEN, M B, F.L.S, British Museum, assisted by J. G. BAKER, F.L.S., Royal Herbarium, Kew

Subscriptions for 1874 (12s. post free in the United Kingdom) payable in advance to the publishers, Messrs Ranken and Co., Drury House, St Mary-le-Strand, London, W.C., of whom may be obtained the volume for 1873 (price 16s 6d. bound in cloth); also covers for the volume (price 1s.), and back numbers.

"THE GARDEN,"

A Weekly Illustrated Journal devoted solely to Horticulture in all its Branches.

"THE GARDEN" is conducted by WILLIAM ROBINSON, F L.S, Author of "Hardy Flowers," "Alpine Flowers for English Gardens," "The Parks, Promenades, and Gardens of Paris," &c.; and the best Writers in every Department of Gardening are contributors to its pages.

The following are some of the subjects regularly treated of in its pages:—

The Flower Garden.
Landscape Gardening.
The Fruit Garden.
Garden Structures
Room and Window Gardens.
Notes and Questions.
Market Gardening.
Trees and Shrubs.
Hardy Flowers.
Town Gardens
The Conservatory.
Public Gardens.
The Greenhouse and Stove.
The Household
The Wild Garden.
The Kitchen Garden

"THE GARDEN" may be obtained through all Newsagents and at the Railway Bookstalls, at 4d. per Copy It may also be had direct from the Office at 5s. for a Quarter, 9s. 9d. for a Half-year, and 19s 6d for a Year, payable in advance, and in Monthly Parts. Specimen Copies (post-free), 4½d.

37, Southampton Street, Covent Garden, W.C.

THE ZOOLOGIST:

A MONTHLY JOURNAL OF NATURAL HISTORY,

Conducted by EDWARD NEWMAN, F.L S. F.Z S. &c.

The Zoologist was established in 1843 to record and preserve observations on subjects similar to those treated of in White's "Natural History of Selborne," and the success which has attended it is sufficient proof that its plan is acceptable to "out-of-door naturalists," those who delight in observing the manners, habits, the private lives, the migrations, movements, nests, young and food of animals It contains original papers and records of facts relating to Quadrupeds, Birds, Reptiles, Fishes, and Insects, together with notices of recent works on every branch of Natural History The editor has been assisted by more than two hundred of our very best zoologists.

Published on the First of every Month.

PRICE ONE SHILLING.

London: JOHN VAN VOORST, 1, Paternoster Row.

THE LINGUIST,

AND

London: MACMILLAN & C.

THE

JOURNAL OF APPLIED CHEMISTRY,

A MONTHLY PUBLICATION OF 16 PAGES QUARTO,

Devoted to Chemistry as applied to Arts and Manufactures, Agriculture, Metallurgy, &c. &c.

At Two Dollars and Twenty-five Cents per annum, or One Dollar and Seventy-five Cents paid strictly in advance, including postage to United Kingdom.

Each number contains Original Articles on General Chemistry applied to Arts and Manufactures; Matter on Particular Fabrications, as Petroleum, Soaps, Tanning, Dyeing, and numerous others

A suitable space is also devoted to Practical Recipes and interesting Scientific Facts.

Full and carefully-prepared Market Reviews and Prices Current of Drugs and Chemicals of every description are given in each number for New York, Boston, and Philadelphia, with Tables of Imports.

EIGHTH VOLUME, commenced with January number.

DEXTER & CO., PUBLISHERS,

Spruce Street, New York; 48, Hanover Street, Boston; and 149, South 4th Street, Philadelphia, Pa., U S.A.

THE ONLY CHEAP FARMERS' NEWSPAPER.

THE CHAMBER OF AGRICULTURE JOURNAL AND FARMERS' CHRONICLE,

Edited by JOHN ALGERNON CLARKE, Secretary to the Central Chamber of Agriculture,

Devotes special attention to the discussions and proceedings of the Chambers of Agriculture of Great Britain (which now number upwards of 18,000 members), besides giving original papers on practical farming, and a mass of intelligence of particular value to the agriculturist.

The London Corn, Seed, Hop, Cattle, and other Markets of Monday are specially reported in this Journal, which is despatched the same evening so as to insure delivery to country subscribers by the first post on Tuesday morning. Price 3d., or prepaid, 15s. a year post free.

Published by W. PICKERING, 21, Arundel Street, Strand, W.C.

THE ENTOMOLOGIST'S MONTHLY MAGAZINE,

Price Sixpence, monthly, 24 pages 8vo., with occasional Illustrations,

Conducted by J. W. DOUGLAS, R. MCLACHLAN, F.L.S., E. C. RYE, and H. T. STAINTON, F.R.S., &c.

This Magazine, commenced in 1864, contains standard articles and notes on all subjects connected with Entomology, and especially on the Insects of the British Isles.

Subscription—Six Shillings per Volume, post-free. The volumes commence with the June number in each year.

Vols. I. to V. (strongly bound in cloth) may be obtained by purchasers of the entire set to date, at the increased price of 10s. each; the succeeding vols. may be had separately or together at 7s. each.

London: JOHN VAN VOORST, 1, Paternoster Row.

N B.—Communications, &c., should be sent to the Editors at the above address.

AN ELEMENTARY TREATISE ON STEAM. By JOHN PERRY, B.E., Whitworth Scholar, F.C.S., late Lecturer on Physics at Clifton College. 4s. 6d.

When boys have acquired an elementary knowledge of Experimental Mechanics and Heat it is well to teach them the application of the principles they have learnt, by some such course as is sketched in the present work, before proceeding to Electricity, Acoustics, and Light. The numerous examples and exercises will prove useful in all Physics classes; whether the whole course is followed or not; to candidates for scholarships at the Universities and to boys preparing for the examinations at Woolwich and Cooper's Hill.

MACMILLAN & CO., LONDON.

Nearly ready.

CHRISTIAN PRAYER and GENERAL LAWS; BURNEY (Cambridge Philosophical, £100) PRIZE ESSAY. Also an Appendix examining the views of Messrs Robertson, Knight, Brooke, Tyndall, and Galton. By GEORGE J ROMANES, M.A. The Essay contains much original matter relating to the philosophy of Science.

MACMILLAN & CO., Cambridge.

BOOKS ON SCIENCE.

The GEOLOGY of the VALLEY of the THAMES. By JOHN PHILLIPS, M.A. F.R.S., Professor of Geology in the University of Oxford. With Coloured Map and numerous Illustrations. 8vo, 21s.

"It does not often fall to our lot to open a book devoted to Science, and to derive from it the large amount of pleasure, and at the same time of real instruction, which we have found in the pages of this volume."—*Athenæum.*

VESUVIUS. By John Phillips, M.A., F.R.S. With numerous Maps and Illustrations. Crown 8vo, 10s. 6d.

"Professor Phillips has undertaken to give an authentic history of Vesuvius from the days of Crassus to the end of 1868, and to explain the phenomena of the burning mountain according to the laws of a rigid induction. His plan has been successfully carried out, and has resulted in a work of high value."—*Pall Mall Gazette.*

DESCRIPTIVE ASTRONOMY. A Handbook for the General Reader, and also for practical Observatory work. With 224 Illustrations and numerous Tables By G F. CHAMBERS, F.R.A.S., Barrister-at-Law. Demy 8vo, cloth, 856 pp., price 21s.

CHEMISTRY FOR STUDENTS. By A W. WILLIAMSON, Phil. Doc. F.R.S., Professor of Chemistry, University College, London. New Edition, with Solutions. Extra fcap. 8vo, cloth, price 8s. 6d.

EXERCISES IN PRACTICAL CHEMISTRY. By A G. VERNON HARCOURT, M.A F R.S., Senior Student of Christ Church, and Lee's Reader in Chemistry; and H. G. MADAN, M.A., Fellow of Queen's College, Oxford. Series I., Qualitative Exercises. Second Edition. Crown 8vo, price 7s. 6d.

AN ELEMENTARY TREATISE ON HEAT. By BALFOUR STEWART, LL.D. F.R.S., Professor of Natural History in Owens College, Manchester. Ext. fcap 8vo, with numerous Woodcuts and Diagrams, 7s. 6d. New Edition, revised and enlarged.

"The publication of this manual is exceedingly well-timed; it includes within narrow limits the leading facts and principles of this younger-born of the Sciences, and for the mastery of the greater portion of the contents only requires ordinary intelligence on the part of the reader."—*Spectator.*

FORMS OF ANIMAL LIFE. Being Outlines of Zoological Classification based upon Anatomical Investigation, and illustrated by Descriptions and Specimens and of Figures. By G. ROLLESTON, M.D F.R.S., Linacre Professor of Physiology, Oxford. Demy 8vo, price 16s.

A TREATISE on ACOUSTICS. By W. J. DONKIN, F.R.S, Savilian Professor of Astronomy in the University of Oxford Crown 8vo, price 7s. 6d.

A SYSTEM OF PHYSICAL EDUCATION: Theoretical and Practical. With 346 Illustrations drawn by A. MACDONALD, of the Oxford School of Art. By ARCHIBALD MACLAREN, The Gymnasium, Oxford. Ext. fcap. 8vo, price 7s. 6d.

"The work before us is one which should be in the hands of every schoolmaster and schoolmistress. It is marked in every line by good sense, and is so clearly written that no one can mistake its rules."—*Lancet.*

ELEMENTS OF NATURAL PHILOSOPHY. By Sir W. THOMSON, LL.D. D C.L. F.R.S, Professor of Natural Philosophy, Glasgow; and P. G. TAIT, M.A., Professor of Natural Philosophy, Edinburgh. Part I., 8vo, 9s.

Oxford: Printed at the Clarendon Press, and Published by MACMILLAN & CO., London, Publishers to the University.

THE LONDON HOSPITAL AND MEDICAL COLLEGE.

The next WINTER SESSION will commence on THURSDAY, Oct. 1st, 1874, when the Introductory Lecture will be given at 3 p.m. by SAMUEL FENWICK, M.D., Assistant Physician to the Hospital.

General Fee to Lectures, with two years' Practical Anatomy, and Hospital Practice, 90 guineas, payable in two instalments of 45 guineas each. Library Fee, £1 1s. Special entries can be made to Lectures or Practice.

The Hospital contains 600 beds. There are Medical and Surgical Wards for Children, Wards for Syphilis, Special Departments for Diseases of Women, Diseases of the Eye, Diseases of the Ear, Diseases of the Skin, and special arrangements for Diseases of the Throat. A Maternity Department exists for the delivery of lying-in women at their own homes. 586 cases were attended last year by the Students of the Hospital.

For instruction in Mental Diseases, Students can attend without further fee the practice of Dr. John Millar, Superintendent of Bethnal House Asylum, a few minutes' walk from the Hospital.

Clinical Lectures, both Medical and Surgical, will be given every week, and practical instructions imparted in all the departments.

The In-patients during 1873 were 5,613, and the Out-patients 43,808; total, 49,421.

At the Medical College, which has been enlarged, Lectures will be given on all the subjects required by the Examining Boards.

Members of the Staff and Lecturers at the College.

Mr. J. Luke, F.R.S.
Mr. John Adams
Mr. Curling, F.R.S.
Dr. Herbert Davies
Dr. Andrew Clark
Dr. Ramskill
Dr. Langdon Down
Dr. Hughlings-Jackson
Dr. Sutton
Dr. Fenwick
Dr. Woodman
Dr. Stephen Mackenzie
Dr. A. E. Sansom
Mr Jonathan Hutchinson
Mr Maunder
Mr. Couper
Mr. Walter Rivington
Mr. Jas. Adams
Mr. Waren Tay
Mr. McCarthy
Mr. Reeves
Dr. Head
Dr. Palfrey
Mr. H. J. Barrett
Mr. A. W. Barrett
Dr. Letheby
Dr. Meymott Tidy
Dr. Prosser James
Dr. Morell-Mackenzie
Mr. J. E. D. Rogers
Mr. Gilbert Baker

The following Prizes and Appointments are open without any further payment to Students paying the general fee of 90 guineas:—

Seven Scholarships, to be offered for competition in the Winter Session:

1. A Scholarship of £30 to the Student of less than three months' standing who passes in October the best examination in the subjects required at the Preliminary Examination.
2. A Scholarship of £20 to the Student of less than three months' standing placed second in the above examination.
3. A Scholarship of £20 in Human Anatomy for first-year Students; to be awarded in April 1875
4. A Scholarship, value £25, in Anatomy, Physiology, and Chemistry, for first-year and second-year Students; to be awarded in April 1875.
5. A Hospital Scholarship, value £20, for Clinical Medicine; to be awarded in April 1875.
6. A Hospital Scholarship, value £20, for Clinical Surgery; to be awarded in April 1875.
7. A Hospital Scholarship, value £20, for Clinical Obstetrics, to be awarded in April 1875; and a Prize of £5 to the Student who has attended most Midwifery Cases for the Hospital during the preceding twelve months.

The Duckworth Nelson Prize, value £10, for Practical Medicine and Surgery (Biennial), 1875.

Money Prizes to the value of £60 given annually by the House Committee for zeal in Dressing Out-patients and knowledge of Minor Surgery

Certificates of Honour in all the Classes according to the results of the General Examinations at the end of the Session, and Special Certificates to those who have filled with credit the duties of the Hospital Appointments.

Four House-Surgeoncies, tenable for three or six months, and Dresserships to In-patients, open to all.

Dresserships to Out-patients, with the privilege of competing for the Prizes above mentioned.

The office of the Resident Medical Officer, tenable for two years, with a salary of £75 the first year, and £100 the second year.

The Office of Junior Resident Medical Officer, tenable or six months

Four Medical Assistantships, held for three months, with residence and board in the Hospital for three weeks.

The office of Resident Accoucheur, tenable for six months.

N B.—The holders of all the resident offices are provided with rooms and board free of expense.

Four offices of Clinical Assistants in the Out-patients' Department, each at a salary of £40.

The office of Medical Registrar, salary 25 guineas.

The office of Surgical Registrar, salary 35 guineas.

Prosectors of Anatomy, Ward Clerks, and Post-mortem Clerks.

A Prospectus, giving details, will be forwarded on application to the Bedell of the London Hospital Medical College, Turner Street, E.

Further information may also be obtained from Mr. James E Adams, Treasurer, 10, Finsbury Circus, E.C.; or Mr. Waren Tay, Vice-Dean, at the Medical College.

PURE AERATED WATERS.

ELLIS'S

RUTHIN WATERS,

Soda, Potass, Seltzer, Lemonade, Lithia, and for GOUT, Lithia and Potass.

CORKS BRANDED "R. ELLIS & SON, RUTHIN," and every Label bears their Trade Mark. Sold everywhere, and Wholesale of R. Ellis & Son, Ruthin, North Wales.

LONDON AGENTS:—W. Best & Sons, Henrietta Street, Cavendish Square.

Sound and Bright for Summer Use.

WALTHAM BROS., BREWERS, STOCKWELL.

HOLLOWAY'S OINTMENT.—Bad legs, wounds, ulcers, and all descriptions of sores, are cured by the proper and diligent use of these inestimable preparations. To attempt to cure a bad leg by plastering the edges of the wound together is folly, for should the skin unite, a baggy diseased condition remains underneath, to break out with tenfold fury in a few days. The only rational permanent treatment, as indicated by nature, is to reduce the inflammation in and about the wound, to soothe the neighbouring nerves, to cool the heated blood as it courses along its vessels, and to render its watery ichorous discharges consistent and healthy. Holloway's Pills should likewise be taken to purify the blood and expel the noxious humour from the system.

In crown 8vo, with 49 Diagrams, price 6s.

BRINKLEY'S ASTRONOMY, revised and partly rewritten, with Additional Chapters, and an Appendix of Questions for Examination. By JOHN WILLIAM STUBBS, D.D., Fellow and Tutor of Trinity College, Dublin; and FRANCIS BRUNNOW, Ph.D., Astronomer Royal of Ireland, and Professor of Astronomy in the University of Dublin. DIARY OF SOCIETIES.

LONDON

WEDNESDAY, OCTOBER 7.

ROYAL MICROSCOPICAL SOCIETY, at 8.—Supplementary Remarks on the Appendicularia: Alfred Sanders.

TO SECRETARIES OF SCIENTIFIC AND LITERARY SOCIETIES.

It having been suggested that the publication of a weekly Diary in NATURE of the Meetings, &c. *of the various provincial* Scientific and Literary Societies *would be found very useful, not only to the Members of such Societies, but to all who are interested in scientific and literary subjects, the Publishers have determined to devote a portion of their Advertisement columns to this purpose, and to insert* NOTICES OF MEETINGS, SUBJECTS OF LECTURES, *&c., at the nominal charge of* One Shilling *for each insertion.*

The Publishers of NATURE *will be glad if the Secretaries of Societies will aid them in their endeavours to make this weekly Diary as complete and useful as possible. Notices intended for insertion therein must be sent, addressed to the* Publishers, *by* Wednesday Mornings.

OFFICE—29, BEDFORD STREET, STRAND.

"*NATURE.*"

Nearly all the Back Numbers of NATURE may be obtained through any Bookseller, or of the Publishers, at the Office, 29, Bedford Street, Strand, W.C., to whom all communications relating to ADVERTISEMENTS should likewise be addressed.

TISLEY AND SPILLER,
OPTICIANS, &c.,
172, BROMPTON ROAD, S.W.
(Three minutes' walk from South Kensington Museum).

JUDSON'S DYES.—18 Colours, 6d. each.

RIBBONS, WOOL, SILK, FEATHERS,

Completely dyed in 10 minutes without soiling the hands.

Full Instructions supplied. Of all Chemists and Stationers.

JUDSON'S DYES.—Dyeing at Home.—JUDSON'S simple DYES are most useful and effectual. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES. Beautiful effects are thus produced in green, pink, brown, and many other colours.—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES.—Ferns, Grasses, Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c., by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed.

JUDSON'S DYES.—Ink—Ink—Ink.—A Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water.

JUDSON'S DYES.—For Colouring Architectural Plans, &c.—Much trouble may be saved in grinding up colours to a uniform tint. They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades.

JUDSON'S DYES.—For Staining Wood.—Diluted with Water. They sink deeply into the fibre, and will not rub off. They form the most economical stain on record. Light Brown for mahogany colour is excellent; No. 2 Black for walnut; Canary for satin; also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE,

Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

HAIR COLOUR WASH.—By damping the hair or whiskers with this beautifully perfumed Wash, in 24 hours the hair becomes its original colour, and remains so by an occasional using. 10s. 6d., sent for P.O. order.—ALEX. ROSS, 248, High Holborn, London; and all Chemists.

NOSE MACHINE.—This is a contrivance which, applied to the nose for an hour daily, so directs the soft cartilage of which the member consists, that an ill-formed nose is quickly shaped to perfection. Anyone can use them, and without pain. Price 10s 6d, sent carriage-free for P.O. order.—ALEX. ROSS, 248, High Holborn, London. Pamphlet sent for two stamps.

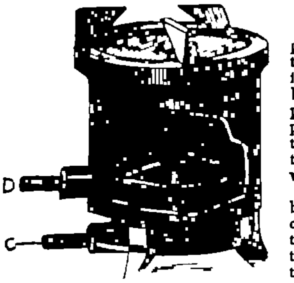
FLETCHER'S
NEW LOW TEMPERATURE BURNER (PATENT)



This Burner gives a range of heating power from a gentle current of WARM air to a BRIGHT RED HEAT, and is so perfectly under control that a common glass bottle may be placed on the tripod without protection and heated to any required temperature without the slightest risk of fracture. In practical use it dispenses with the necessity for drying-closets, sand-and-water baths, &c

For very low temperatures the ring must be lighted through the opening B, this causes a current of warm air to rise through the gauze above. For higher temperatures the light must be applied on the surface of the gauze A, which will give a large body of clear blue flame. A special pattern is made with a blast tube, by which the flame on the surface can be concentrated and urged until it gives almost a clear white heat, the temperature depending on the air supplied through the blast tube

Price, without blast tube 7s. 6d
,, with blast tube for high temperatures ... 9s. 0d.

UNIVERSAL FURNACE (GAS),
For High Temperatures (without blast) for Crucibles, Muffles, &c , in several sizes and patterns Special designs made to order.

NEW BUNSEN BURNERS, giving a range of temperature up to a clear white heat, 10s. 6d.

HOT BLAST BLOWPIPES, giving temperatures exceeding the fusing-point of platinum, 11s 6d , 13s., 15s.

POWERFUL FOOT-BLOWERS, 18s.

History of the Life-boat and its Work. By RICHARD LEWIS, of the Inner Temple, Barrister-at-Law. With Illustrations. Crown 8vo.

MACMILLAN AND CO., LONDON.

IMPORTANT CORRESPONDENCE.

THE REV. SIR EDWARD R. JODRELL, BART.,

To Messrs. FELTOE AND SONS, 26, Conduit Street, Bond Street, W.

When at Sall I received an Analytical Report of your "Specialité" Sherry, and you must forgive me for saying that at first I regarded the whole matter as a most egregious piece of humbug. Having, however, tasted the Wine in question, and found it most agreeable to the palate, I determined on my own responsibility to have it analysed *for myself*, having fully also determined previously to expose any hoax "pro bono publico," or to give you the benefit of the analysis, should it turn out in your favour. I have the pleasure to forward you Professor Redwood's (of the Pharmaceutical Society of Great Britain) Analysis, which says more than I can express. I am very particular as to the Wine I drink, and as I have been hitherto buying "every-day Sherry" at 60s a dozen, I am rejoiced to find *now* that I can purchase Wine of equal strength and superior bouquet at half that price. This should be known to the "General Public," and you can make any use you deem proper of this letter, and also of Professor Redwood's most elaborate analysis.

Yours faithfully,

21, Portland Place, London, December 9th, 1873. (*Signed*) EDWARD REPPS JODRELL.

THE REV. SIR E. R JODRELL.

SIR,—I have completed the Analysis of the sample of Sherry you left with me, and proceed to report the results. Judged by the palate it might be represented as a light, moderately dry Wine, with nothing to object to in its flavour or apparent strength.

I proceeded to make a more minute analysis, the results of which were as follows.—

Absolute Alcohol, by Volume	20·0 parts in 100
Free or unneutralised Acid, partly volatile and partly non-volatile	0·54 "
Volatile Acid (acetic acid)	0·1 "
Sugar and Extract	2·5 "
Ash, from incineration of Extract	0·45 "
MINERAL ACID, or inorganic matter, NOT YIELDED BY GRAPE-JUICE	NONE.

THESE RESULTS ARE ALL SATISFACTORY. The proportion of alcohol is that found in the best samples of Sherry; the volatile acid (acetic acid) is not more than is usually present, and the fixed acid is the TRUE ACID OF THE GRAPE, namely, tartaric acid. The ash is not more than it should be, and contains nothing foreign to the grape.

In preparing this Analysis, I have been enabled to observe that the alcohol, when separated from the other constituents of the wine, was PURE IN FLAVOUR AND OF GOOD QUALITY, and that there was NOTHING OBJECTIONABLE in the extract or other products that were separated in the process of analysation.

I am yours truly,

(*Signed*) T. REDWOOD, *Professor of Chemistry to the*
5th December, 1873 PHARMACEUTICAL SOCIETY OF GREAT BRITAIN.

The recent Medical Correspondence in the "TIMES" demonstrates how injurious to health is "made-up Sherry," ALCOHOLISED to an UNREASONABLE extent.

MESSRS. FELTOE AND SONS,

By appointment to the ROYAL FAMILY—established FIFTY-NINE years—are SOLE PROPRIETORS and IMPORTERS of the

"SPECIALITÉ" SHERRY,

Adopted and Recommended by nearly 2,000 Physicians and Surgeons for its Valuable Dietetic Qualities.

"To the meal of a patient suffering from Dyspepsia it would be valuable."
Medical Times.

"Free from Acidity and Heat,"
The British Medical Journal.

"Valuable for Gouty or Uric Acid tendencies."
Dr. Hardwicke, Metropolitan Analyst.

"Has a great Medical Reputation."
Medical Record.

"Contains nothing Foreign to the Grape."
Professor Redwood.

"THE CASH SYSTEM ONLY."

30s.. DOZEN. **£18** QUARTER CASK, of Bright Wine in Cask. Carriage paid to any Railway Station in England, and Scotland, and to any Port in Ireland.

MANZANILLA AND MONTILLA,

For the PURITY of which Wines Messrs. FELTOE & SONS are so renowned, are now also supplied at the same strictly CASH PRICE as their popular SPECIALITÉ SHERRY.

Printed by R. CLAY, SONS, & TAYLOR, at 7 and 8, Bread Street Hill, in the City of London, and published by MACMILLAN & Co., at the Office, 29 and 30, Bedford Street, Covent Garden.—THURSDAY, October 1, 1874.

NATURE

A WEEKLY ILLUSTRATED JOURNAL OF SCIENCE.

"To the solid ground
Of Nature trusts the mind which builds for aye."—WORDSWORTH

No. 258, Vol. 10] THURSDAY, OCTOBER 8, 1874 [Price Fourpence

Registered as a Newspaper at the General Post Office [All Rights are Reserved

YORKSHIRE COLLEGE OF SCIENCE, LEEDS.

President—Lord F. C. Cavendish, M.P.

The FIRST SESSION will commence on MONDAY, October 26th, 1874, and terminate July 23rd, 1875

CLASSES.

Mathematics—Professor A W. Rücker, M.A., Fellow of Brasenose College, Oxford Fee, £3 13s 6d. per session.

Experimental Physics—Professor A. W. Rücker, M A. Fee, £2 12s. 6d. per session.

General Chemistry—Professor T. E. Thorpe, Ph D. F R.S.E. F.C.S. Fee, £4 4s per session.

Chemical Laboratory—Professor T. E. Thorpe, Ph D. Fee, from £4 4s. per month ; whole session, £17 17s.

Geology and Mining—Professor A Green, M A. F G.S , late Fellow of Gonville and Caius College, Cambridge. Fee, £4 4s per session.

Textile Industries—Professor William Walker (Endowed by the Clothworkers' Company, London) Fees : Course A, £10 10s , Course B, £5 5s.

The arrangement for Evening Classes will be announced hereafter

Prospectuses of the Courses of Lectures are now ready, and may be had by written application to the Secretary.

J. D. HEATON, Chairman.
Sept. 24, 1874. HENRY H. SALES, Secretary,

LONDON SCHOOL of MEDICINE FOR WOMEN,

30, Henrietta Street, Brunswick Square, W.C.

Council—Dr Charlton Bastian, Dr. Billing, Dr Elizabeth Blackwell, Dr. King Chambers, Dr Cheadle, Mr George Cowell, Mr. Critchett, Mrs. Garrett Anderson M D , Mr. Ernest Hart, Mr. Berkeley Hill Professor Huxley, Dr Hughlings Jackson, Dr Murie, Mr A T. Norton, Dr Payne, Dr W. S Playfair, Dr Burdon-Sanderson, Dr Sturges

Lecturers—Mr A W. Bennett, Dr King Chambers, Dr. Cheadle, Mr Critchett, Mrs Garrett Anderson, M D , Mr. Heaton, Mr. Berkeley Hill, Dr. Murie, Mr. A. T. Norton, Mr Schäfer, Dr. Sturges.

Dean of the School—Mr. A. T. Norton, vice Dr. Anstie, deceased.

The WINTER SESSION of 1874–75 will open on OCTOBER 12th and will comprise Classes in Anatomy, Practical Anatomy, Physiology, and Chemistry

For further particulars apply to the Dean of the School.

EMMA HEATON, Secretary

QUEENWOOD COLLEGE, near STOCKBRIDGE, HANTS.

Sound General Education for Boys.

Special attention to Science, particularly to Chemistry, both theoretical and practical

C WILLMORE, Principal.

ROYAL COUNCIL OF EDUCATION.—

The Laboratory and Class-rooms of Berners College are open for Pupils EVERY DAY and EVENING. The subjects of the above Examinations can be studied either Privately or in Classes. Fees moderate. Analyses and investigations conducted —Apply to Prof. E. V. Gardner, F.E.S., F.S.A., 44, Berners Street, W.

"NATURE."

The Fourth Edition of Nature for August 20, containing a Steel Engraving of Professor Tyndall and his Inaugural Address at the Meeting of the British Association at Belfast, is now exhausted with the exception of a very few Copies, which may be had at the Office, price One Shilling each.

29, Bedford Street, Strand.

MATRICULATION EXAMINATION, LOND. UNIV., January 1875.

F. A. HANBURY, M.A., Wrangler and late

Senior Scholar of his College, READS WITH PUPILS for this Exam. He is assisted by efficient Lecturers in French, Chemistry, and Classics, and has been particularly successful for this Exam , having passed fifty-seven Pupils, to whom reference can be given. Two of these passed in the Honours list in January 1873, seventh and fourteenth respectively. A Class will commence early in September, and another early in October. Fees for the two, £14 and £10 10s respectively For further particulars, address 24, Old Square, Lincoln's Inn, W C —A few Residents can be accommodated in Mr. Hanbury's house at Clapham.

PRELIMINARY EXAMINATION IN ARTS, ROYAL COLL. SURG , December 1874.

F. A. HANBURY, M.A., Wrangler and late

Senior Scholar of his College, PREPARES PUPILS for this Exam He is assisted by efficient Lecturers in French and Chemistry, and has passed several Pupils for this Exam , to whom reference can be given. Terms from 8 to 12 Guineas, according to subjects taken up and time of joining the class. For further particulars, address, 24, Old Square, Lincoln's Inn, W C.

PRELIMINARY EXAMINATIONS of the

COLLEGE of SURGEONS and APOTHECARIES' HALL.—Mr J. ERLE BENHAM (formerly of King's College, London, author of several works), who has compiled, expressly for his own Pupils, Guides to the above, containing upwards of 400 questions and answers on all the subjects of examination, has CLASSES READING at his residence at Hampstead (where he receives a few resident Pupils) and in the Temple, for these Examinations For references to Noblemen, Members of Parliament, Doctors of eminence, Queen's Counsel, &c., address to 3, Pump Court, Temple, or to the care of Messrs. Butterworth, 7, Fleet Street, her Majesty's Publishers.

LADIES' EDUCATIONAL ASSOCIA-

TION, in connection with University College, London.—Prof MORLEY and Prof BUND'S Evening Classes for Ladies, of English and English History, will open, at University College, respectively, on MONDAY, Oct. 12, at 6, and WEDNESDAY, Oct 21, at 5 30. The Day Classes will meet on MONDAY, Oct. 26 Prospectuses to be had in the Office at the College, or of J. E. Mylne, Esq., 27, Oxford Square, Hyde Park, W

MATHEMATICS and SCIENCE.—Pupils

prepared for Competitive and Pass Examinations by a High Wrangler and Nat. Science Man Successful in Tuition. In the Country by Correspondence Classes visited —J. F. Blake, 6, Wells Road, Regent's Park, N.W.

Mr. C. H. LAKE (Graduate in Honours,

London) receives a limited number of RESIDENT PUPILS. Testimonials from the late J. S Mill, Dr. Tyndall, &c. Science receives careful attention.—Withernden, Caterham, Surrey.

To PUBLISHERS, Journalists, Barristers, &c.—A Gentleman, long connected with the Press, well educated, a swift Shorthand Writer, and knowing French, seeks ENGAGEMENT as WRITER, TRANSLATOR, Literary Amanuensis, Secretary, or in any respectable capacity. Moderate Terms.—Address C R, Deacon's, Leadenhall Street; or R. F. O'Connor, 321, Vauxhall Bridge Road, S.W.

MINERALS and ROCKS, Classified after Miller, Dana, and Rose. 100 Examples, 21s.; 200 ditto, £2 10s. to £3 10s.; 300 ditto, £4 10s. to £6; 400 ditto, £6 to £8; 500 ditto, £8 8s. to £10 10s. Including Half Fossils, 250 Examples, £3 10s. 6d.; 400 ditto, £6. 150 FOSSILS illustrating Morris's Chart or Lyell's Manual, 30s.; 250 ditto (mostly of the species figured), £3; 350 ditto, £5 to £6. RECENT SHELLS: 100 genera, £1; 200 ditto, £2 10s.

ALFRED BELL, 5, Grafton Street, Fitzroy Square, London.

GEOLOGY.—ELEMENTARY COLLECTIONS to illustrate the New Edition of "Lyell's Students' Elements of Geology," and facilitate the important study of this science, can be had at 2, 5, 10, 20, 50, to 1,000 guineas. Also, Single Specimens of Rocks, Minerals, Fossils, and Recent Shells. Geological Maps, Hammers, all the Recent Publications, &c., of J. TENNANT, Mineralogist to Her Majesty 149, Strand, London.

Practical Instruction is given in Geology and Mineralogy by Professor TENNANT, F.R.G.S., at his residence, 149, Strand, W.C.

GEOLOGY.—Collections of Characteristic Fossils and Rocks for Students preparing for the Examinations, at moderate prices; also Single Specimens, Hammers, Pocket Lenses, Books, and all necessaries, of JAMES R. GREGORY, Geologist, 15, Russell Street, Covent Garden, W.C. Removing in December next to 88, Charlotte Street, Fitzroy Square, W.

The Half Guinea Ale

Sound and Bright for Summer Use.

WALTHAM BROS., BREWERS, STOCKWELL.

TRUSSES (Self-adjusting), in use for the last sixty years, and same as worn by his late Majesty William IV. From 10s. each. SALMON ODY & CO., by appointment to the Army and Navy, 292, Strand, London. Price List post free.

CHEST EXPANDER and TROUSERS BRACE combined, 8s.; Ladies' Chest Expanders from 5s. 6d.—SALMON ODY & CO., 292, Strand, London. Established 1806.

ELASTIC STOCKINGS for Varicose Veins or Weak Joints; and LADIES' ABDOMINAL BELTS, made to any size. Directions for self-measurement and prices post free. SALMON ODY & CO., 292, Strand, London.

HAIR COLOUR WASH.—By damping the hair or whiskers with this beautifully perfumed Wash, in 24 hours the hair becomes its original colour, and remains so by an occasional using. 10s. 6d., sent for P.O. order.—ALEX. ROSS, 248, High Holborn, London; and all Chemists.

NOSE MACHINE.—This is a contrivance which, applied to the nose for an hour daily, so directs the soft cartilage of which the member consists, that an ill-formed nose is quickly shaped to perfection. Anyone can use them, and without pain. Price 10s. 6d., sent carriage-free for P.O. order.—ALEX. ROSS, 248, High Holborn, London. Pamphlet sent for two stamps.

Sale by Auction.

SCIENTIFIC AND MISCELLANEOUS PROPERTY.

Mr. J. C. STEVENS will Sell by Auction, at his Great Rooms, 38, King Street, Covent Garden, W.C., on FRIDAY, October 9, at half-past 12 o'clock precisely, Lathes and Tools, Model Engines, Electrical Apparatus, Chemicals, Surgical Instruments, Photographic Apparatus, Graphoscopes, Stereoscopes, and a great variety of Miscellaneous Articles.

On view the morning of sale, and catalogues had.

NOTICE.—To Science Classes.—MOTTERSHEAD AND CO., LABORATORY FURNISHERS, EXCHANGE STREET, MANCHESTER, supply all the Apparatus enumerated in the SOUTH KENSINGTON LISTS FOR THE USE OF TEACHERS OF CHEMICAL OR PHYSICAL SCIENCE (including Light, Heat, Electricity, Magnetism, &c.), and will be happy to show intending purchasers specimens of the various Instruments, or to forward Estimates on application. Orders exceeding £2 in value delivered free to any railway station in England.

W. LADD & CO.

DIARY OF SOCIETIES.

LONDON

FRIDAY, OCTOBER 9.

JUNIOR PHILOSOPHICAL SOCIETY, at 7.30.—Introductory Address by the President.

TO SECRETARIES OF SCIENTIFIC AND LITERARY SOCIETIES.

It having been suggested that the publication of a weekly Diary in NATURE of the Meetings, &c. *of the various provincial* Scientific and Literary Societies *would be found very useful, not only to the Members of such Societies, but to all who are interested in scientific and literary subjects, the Publishers have determined to devote a portion of their Advertisement columns to this purpose, and to insert* NOTICES OF MEETINGS, SUBJECTS OF LECTURES, *&c., at the nominal charge of* One Shilling *for each insertion.*

The Publishers of NATURE *will be glad if the Secretaries of Societies will aid them in their endeavours to make this weekly Diary as complete and useful as possible. Notices intended for insertion therein must be sent, addressed to the* Publishers, *by* Wednesday Mornings.

OFFICE—29, BEDFORD STREET, STRAND.

"*NATURE.*"

Nearly all the Back Numbers of NATURE may be obtained through any Bookseller, or of the Publishers, at the Office, 29, Bedford Street, Strand, W.C., to whom all communications relating to ADVERTISEMENTS should likewise be addressed.

Now ready, Vol. 9, bound in cloth, price 10*s.* 6*d.*

Cloth Cases for binding all the volumes, price 1*s.* 6*d.* each.

Reading Cases to hold 26 numbers, price 2*s.* 6*d.*

To be had through any bookseller or newsagent, or at the Office,

29, BEDFORD STREET, STRAND, W.C.

EVERY THURSDAY, PRICE 4*d.*

"*NATURE.*"

CHARGES FOR ADVERTISEMENTS.

Three lines in column, 2s. 6d.; 9d. per line after.

	£	*s.*	*d.*
One-eighth page, or quarter column	0	18	6
Quarter page, or half a column	1	15	0
Half a page, or a column	3	5	0

TISLEY AND SPILLER, OPTICIANS, &c.,

172, BROMPTON ROAD, S.W.

(Three minutes' walk from South Kensington Museum).

JUDSON'S DYES.—18 Colours, 6d. each.

RIBBONS, WOOL, SILK, FEATHERS,

Completely dyed in 10 minutes without soiling the hands.

Full Instructions supplied. Of all Chemists and Stationers.

JUDSON'S DYES.—Dyeing at Home.—JUDSON'S simple DYES are most useful and effectual. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES Beautiful effects are thus produced in green, pink, brown, and many other colours—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES.—Ferns, Grasses, Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c., by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed.

JUDSON'S DYES.—Ink—Ink—Ink.—A Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water.

JUDSON'S DYES.—For Colouring Architectural Plans, &c.—Much trouble may be saved in grinding up colours to a uniform tint. They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades.

JUDSON'S DYES.—For Staining Wood.—Diluted with Water. They sink deeply into the fibre, and will not rub off. They form the most economical stain on record. Light Brown for mahogany colour is excellent, No. 2 Black for walnut; Canary for satin; also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE,

Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

THE JOURNAL OF INDUSTRY:

An Illustrated Record of Manufactures, Inventions, and the Applied Arts and Sciences

6*d.* MONTHLY, or POST-FREE, 6*s.* 6*d.* PER ANNUM.

The "Journal of Industry" is issued with the object of promoting the interests of British Manufacturers by—

The Collection of Valuable Information from all parts of the Industrial World.
The Discussion of Matters important to Manufacturers.
Descriptive Accounts of useful Patents and Inventions
Reports and Correspondence on Science in its Relation to Industrial and Commercial Progress

⁂ This Journal has now the Largest Circulation of any Publication of the kind in the World.

Published by WILLIAMS & COMPANY, 7, Bolt Court, Fleet Street, London.

"NATURE" SERIES.

A SERIES OF POPULAR SCIENTIFIC WORKS.

Vol. I.—The SPECTROSCOPE and its APPLICATIONS. By J. Norman Lockyer, F.R.S. With numerous Illustrations. Second Edition, crown 8vo, 3*s*. 6*d*.

"To any student who wishes to make himself, in a comparatively short time, well acquainted with the principles and the application of the spectroscope, we cannot recommend a better treatise."—*Westminster Review.*

Vol. II.—The ORIGIN and METAMORPHOSIS of INSECTS. By Sir John Lubbock, M.P. F.R.S. With numerous Illustrations. Second Edition, crown 8vo, 3*s*. 6*d*.

"We invite attention to the admirable manner in which the subject of insect metamorphosis is illustrated by excellent figures." —*Field.*

Vol. III.—The BIRTH of CHEMISTRY. By G. F. Rodwell, F.R.A.S. F.C.S., Science Master in Marlborough College. With numerous Illustrations. Crown 8vo, 3*s*. 6*d*.

"Mr. Rodwell's work is the product of scholarly investigation. Chemists cannot fail to enjoy it, and those who are not chemists will be tempted to enter on the study of its mysteries."—*Chemist and Druggist.*

"A thoughtful, suggestive, and decidedly readable work."—*Quarterly Journal of Science.*

The TRANSIT of VENUS. By George Forbes, B.A., Professor of Natural Philosophy in the Andersonian University, Glasgow. With numerous Illustrations. Crown 8vo, 3*s*. 6*d*.

To be shortly published.

POLARISATION of LIGHT. By W. Spottiswoode, LL.D. F.R.S. With numerous Illustrations. Crown 8vo.

The COMMON FROG. By St. George Mivart, F.R.S., Lecturer on Comparative Anatomy at St. Mary's Hospital. With numerous Illustrations. Crown 8vo.

On BRITISH WILD FLOWERS, considered in RELATION to INSECTS. By Sir JOHN LUBBOCK, M.P. F.R.S. With numerous Illustrations. Crown 8vo.

MACMILLAN & CO., LONDON.

Just Published. 8vo. Price 14*s*.

A MANUAL OF THE CHEMISTRY OF THE CARBON COMPOUNDS; OR, ORGANIC CHEMISTRY.

By C. SCHORLEMMER, F.R.S.,

LECTURER ON ORGANIC CHEMISTRY IN THE OWENS COLLEGE, MANCHESTER.

"Nor is Mr. Schorlemmer appreciated by the profession for his experimental researches only; his fame is even more widely spread by his 'Manual of Organic Chemistry.' This is one of the favourite works from which the present generation of young chemists derive their information. Having myself to teach a large class of students, I have continuous opportunities of recommending this work and of observing the benefit derived from this recommendation."—PROF HOFMANN.

HOLLOWAY'S PILLS.—For the cure of bilious complaints, indigestion, and affections of the liver Symptoms indicative of these disorders are a feeling of nausea, distention and spasmodic pains in the stomach, sense of oppression and sinking after eating, want of appetite, languor, dejection of spirits, and general debility The removal of the cause is the most important step, for which have recourse to Holloway's Pills, as they possess such cleansing properties that the action of the liver is speedily corrected, the redundancy of bile carried off, the stomach strengthened, the spirits revived and patient restored. These excellent Pills keep all the natural functions so fairly balanced that they prevent or speedily subdue headache, dizziness, bilious attacks, and similar maladies

DRAPER'S INK (DICHROIC).

THE NEW BLACK INK
DIFFERING FROM ANYTHING ELSE EVER PRODUCED.

Writing becomes a pleasure when this Ink is used. It has been adopted by the principal Banks, Public Offices, and Railway Companies throughout Ireland.

It writes almost instantly Full Black.
Does not corrode Steel Pens.
Is cleanly to use, and not liable to Blot.
Flows easily from the Pen.
Blotting-paper may be applied at the moment of writing.

TO BE HAD OF ALL STATIONERS.

HOLLOWAY'S OINTMENT and PILLS. —Diseases and casualty incidental to youth may be safely treated by the use of these excellent medicaments according to the printed directions folded round each pot and box. This Ointment is not alone applicable to external ailments; conjointly with the Pills it exercises the most salutary influence in checking inflammations in the interior of the body; when rubbed upon the back and chest it gives most sensible relief in asthma, bronchitis, pleurisy, and threatening consumption Holloway's remedies are especially serviceable in liver and stomach complaints. For the cure of bad legs, all sorts of wounds, sores, and likewise scrofula and scorbutic affections, this Ointment produces a cooling and soothing feeling most acceptable to the sufferer.

JUDSON'S DYES.—18 Colours, 6d. each.

RIBBONS, WOOL, SILK, FEATHERS,

Completely dyed in 10 minutes without soiling the hands.

Full Instructions supplied. Of all Chemists and Stationers.

JUDSON'S DYES.—Dyeing at Home.—JUDSON'S simple DYES are most useful and effectual. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES Beautiful effects are thus produced in green, pink, brown, and many other colours—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES.—Ferns, Grasses, Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c., by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed.

JUDSON'S DYES.—Ink—Ink—Ink.—A Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water.

JUDSON'S DYES.—For Colouring Architectural Plans, &c—Much trouble may be saved in grinding up colours to a uniform tint They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades.

JUDSON'S DYES.—For Staining Wood.—Diluted with Water They sink deeply into the fibre, and will not rub off They form the most economical stain on record. Light Brown for mahogany colour is excellent; No 2 Black for walnut, Canary for satin ; also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE,

Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

29, BEDFORD STREET, STRAND, W.C.

SCOTTISH PROVIDENT INSTITUTION,

Established 1837

6, ST. ANDREW SQUARE, EDINBURGH; 18, KING WILLIAM STREET, LONDON, E.C.

The PREMIUM usually charged for £1,000 will here, in most cases, assure £1,200 or £1,250 from the first, the difference being equivalent to an *immediate* and certain Bonus of 20 to 25 per cent.

The WHOLE PROFITS are reserved for those who prove good lives. The additions to policies now sharing for the first time vary (according to the values) from about 17 to upwards of 30 per cent. Policies, say for £1,000, which now receive a second addition, have been raised to £1,250 or £1,450. In a few cases, policies which have shared at the whole four divisions have been doubled.

Examples of Annual Premium by different Modes of Payment for Assurance of £100 at death (with profits).

Age.	Payable during life.	Premiums limited to 20 payments.	Premiums limited to 10 payments.	Age.	Payable during life.	Premiums limited to 20 payments.	Premiums limited to 10 payments.
25	£1 18 0	£2 13 8	£4 5 7	40	£2 14 9	£3 8 10	£5 7 11
30	2 1 6	2 16 8	4 10 3	45	3 5 9	3 19 0	6 1 2
35	2 6 10	3 1 6	4 17 7	50	4 1 7	4 13 8	6 19 7

INTENDING ASSURERS are invited to compare these rates with the corresponding scales of other offices.

The Funds exceed £2,250,000.

Notwithstanding its low rates, no Office of the same age has so large a Fund, or shows so large a Yearly Increase.

Copies of the 36th Annual Report, with particulars of the recent investigation and every information may be had on application.

London: LONGMANS & CO.

AN ELEMENTARY TREATISE ON

STEAM. By JOHN PERRY, B.E., Whitworth Scholar, F.C.S., late Lecturer on Physics at Clifton College. 4s. 6d.

When boys have acquired an elementary knowledge of Experimental Mechanics and Heat it is well to teach them the application of the principles they have learnt, by some such course as is sketched in the present work, before proceeding to Electricity, Acoustics, and Light. The numerous examples and exercises will prove useful in all Physics classes; whether the whole course is followed or not; to candidates for scholarships at the Universities and to boys preparing for the examinations at Woolwich and Cooper's Hill.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS

is allowed by upwards of 500 Medical Men to be the most effective invention in the curative treatment of Hernia. The use of a steel spring, so often hurtful in its effects, is here avoided; a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, 2 inches below the hips, being sent to the manufacturer,

JOHN WHITE, 228, Piccadilly.

Price of a Single Truss, 16*s*, 21*s*, 26*s*. 6*d*., and 31*s*. 6*d*.

THE ZOOLOGIST:

A MONTHLY JOURNAL OF NATURAL HISTORY,

Conducted by EDWARD NEWMAN, F.L.S. F.Z.S. &c.

The Zoologist was established in 1843 to record and preserve observations on subjects similar to those treated of in White's "Natural History of Selborne," and the success which has attended it is sufficient proof that its plan is acceptable to "out-of-door naturalists;" those who delight in observing the manners, habits, the private lives, the migrations, movements, nests, young and food of animals. It contains original papers and records of facts relating to Quadrupeds, Birds, Reptiles, Fishes, and Insects, together with notices of recent works on every branch of Natural History. The editor has been assisted by more than two hundred of our very best zoologists.

Published on the First of every Month.

PRICE ONE SHILLING.

London: JOHN VAN VOORST, 1, Paternoster Row.

As LECTURER on TECHNOLOGICAL CHEMISTRY —A Gentleman with long experience in Technological Chemistry acquired in various chemical manufactories, where the positions of analyst, scientific and practical manager and partner, have been held at different times, wishes to obtain a LECTURESHIP as above, either in some existing institution, or as a commencement on trial, accompanied with some definite guarantee Instruction in the Laboratory in Technical Analyses and in the art of Chemico-technological Research would be undertaken, also in the general method and rules to be observed in laying down plant, and generally in preparing plans and specifications for chemical works. The advertiser would also undertake, if desired, a Supplementary Course of Instruction in pure Chemistry, accompanied with Laboratory Practice.—Apply by letter to F. C S., Post Office, Alderley, Cheshire

PREPARATION for the Public Schools by an Oxford M.A and First Classman. Natural Science included in the ordinary scheme of work.—Address J. L. Watson, Esq, Richmond House, Worthing, Sussex.

TUITION in CLASSICS, ENGLISH LANGUAGE, HISTORY, and LITERATURE.—An experienced Tutor attends Schools and Families, in London or the Country, to teach the above Subjects Prepares for the Public Schools, Universities, and the Army —Address Tutor, 15, Gledhow Terrace, South Kensington, S.W.

SCIENTIFIC and LITERARY SOCIETIES requiring ROOMS for MEETINGS, REFRESHMENT, &c, may hear of excellent Accommodation at a Moderate Cost by applying to Mr. Poole, 11, Chandos Street, Cavendish Square, W.

The REV. L. HENSLEY, Vicar of Hitchin, Herts, formerly Fellow and Assistant Tutor of Trinity College, Cambridge, receives several Pupils, to prepare for the Universities and other examinations; and has now Vacancies

SCIENCE TUITION by CORRESPONDENCE —For terms, apply to D C L, care of Macmillan and Co, 29, Bedford Street, Strand, London, W.C.

PRIVATE TUITION.—A Clergyman of long experience and uniform success in Tuition, RECEIVES FOUR PUPILS Home comforts combined with great educational advantages. The highest references —M A., care of Editor of Nature, 29, Bedford Street, Strand, W.C.

ASTRONOMER.—Wanted, a Young Gentleman as Assistant in a Private Observatory in Ireland. He must be a good mathematician, and if possible, a German scholar Terms, £50 a year, with board and lodging.—For full particulars apply to W, Post Office, Edgeworthtown, Ireland.

NOTICE OF REMOVAL.—Mr. JAMES R. GREGORY, Geologist, will REMOVE in DECEMBER NEXT to extensive and well-lighted Premises, now building at 88, CHARLOTTE STREET, FITZROY SQUARE, W., from 15, Russell Street, Covent Garden. Collections and Specimens as usual.

GEOLOGY.—ELEMENTARY COLLECTIONS to illustrate the New Edition of "Lyell's Students' Elements of Geology," and facilitate the important study of this science, can be had at 2, 5, 10, 20, 50, to 1,000 guineas. Also, Single Specimens of Rocks, Minerals, Fossils, and Recent Shells Geological Maps, Hammers, all the Recent Publications, &c, of J TENNANT, Mineralogist to Her Majesty 149, Strand, London.

Practical Instruction is given in Geology and Mineralogy by Professor TENNANT, F.R.G.S, at his residence, 149, Strand, W.C.

MINERALS and ROCKS, Classified after Miller, Dana, and Rose. 100 Examples, 25s.; 200 ditto, £2 10s to £3 10s.; 300 ditto, £4 10s. to £6; 400 ditto, £6 to £8; 500 ditto, £8 8s. to £10 10s. Including Half Fossils, 250 Examples, £3 10s. 6d., 400 ditto, £6. 150 FOSSILS Illustrating Morris's Chart or Lyell's Manual, 30s; 250 ditto (mostly of the species figured), £3; 350 ditto, £5 to £6 RECENT SHELLS: 100 genera, £1; 200 ditto, £2 10s.

ALFRED BELL, 5, Grafton Street, Fitzroy Square, London.

The Half. Guinea Ale

Sound and Bright for Summer Use.

WALTHAM BROS, BREWERS, STOCKWELL.

NOTICE.—To Science Classes.—MOTTERSHEAD AND CO., LABORATORY FURNISHERS, EXCHANGE STREET, MANCHESTER, supply all the Apparatus enumerated in the SOUTH KENSINGTON LISTS FOR THE USE OF TEACHERS OF CHEMICAL OR PHYSICAL SCIENCE (including Light, Heat, Electricity, Magnetism, &c.), and will be happy to show intending purchasers specimens of the various Instruments, or to forward Estimates on application. Orders exceeding £2 in value delivered free to any railway station in England.

TRUSSES (Self-adjusting), in use for the last sixty years, and same as worn by his late Majesty William IV. From 10s each. SALMON ODY & CO, by appointment to the Army and Navy, 292, Strand, London. Price List post free.

CHEST EXPANDER and TROUSERS BRACE combined, 8s.; Ladies' Chest Expanders from 5s. 6d.—SALMON ODY & CO, 292, Strand, London. Established 1806.

ELASTIC STOCKINGS for Varicose Veins or Weak Joints; and LADIES' ABDOMINAL BELTS, made to any size. Directions for self-measurement and prices post free. SALMON ODY & CO., 292, Strand, London.

HAIR COLOUR WASH.—By damping the hair or whiskers with this beautifully perfumed Wash, in 24 hours the hair becomes its original colour, and remains so by an occasional using. 10s. 6d., sent for P.O order.—ALEX. ROSS, 248, High Holborn, London; and all Chemists.

NOSE MACHINE.—This is a contrivance which, applied to the nose for an hour daily, so directs the soft cartilage of which the member consists, that an ill-formed nose is quickly shaped to perfection. Anyone can use them, and without pain. Price 10s. 6d., sent carriage-free for P.O order.—ALEX. ROSS, 248, High Holborn, London. Pamphlet sent for two stamps.

THE ZOOLOGIST:

A MONTHLY JOURNAL OF NATURAL HISTORY,

Conducted by EDWARD NEWMAN, F.L.S F.Z.S. &c.

The Zoologist was established in 1843 to record and preserve observations on subjects similar to those treated of in White's "Natural History of Selborne," and the success which has attended it is sufficient proof that its plan is acceptable to "out-of-door naturalists," those who delight in observing the manners, habits, the private lives, the migrations, movements, nests, young and food of animals. It contains original papers and records of facts relating to Quadrupeds, Birds, Reptiles, Fishes, and Insects, together with notices of recent works on every branch of Natural History. The editor has been assisted by more than two hundred of our very best zoologists.

Published on the First of every Month.

PRICE ONE SHILLING.

London: JOHN VAN VOORST, 1, Paternoster Row.

THE EDINBURGH REVIEW, No. 286,

OCTOBER, is just published

CONTENTS.

I.—"Scharnhorst."

Spectroscopes, Microscopes, Polariscopes, and every variety of Philosophical Apparatus.

11 & 12, BEAK STREET, REGENT STREET, W.,

AND

199, BROMPTON ROAD, S.W.

ESTABLISHED 1843.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS

is allowed by upwards of 500 Medical Men to be the most effective invention in the curative treatment of Hernia. The use of a steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, 2 inches below the hips, being sent to the manufacturer,

JOHN WHITE, 228, Piccadilly.

Price of a Single Truss, 16*s.*, 21*s.*, 26*s.* 6*d.*, and 31*s.* 6*d.*
" Double " 31*s.* 6*d.*, 42*s.*, and 52*s.* 6*d.*
" Umbilical " 42*s.* and 52*s.* 6*d.*
} Post-free.

ELASTIC STOCKINGS, KNEE-CAPS,

&c., for Varicose Veins and all cases of weakness and Swellings of the Legs, Sprains, &c. They are porous, light in texture, and inexpensive, and drawn on over an ordinary stocking. Price 4*s.* 6*d.*, 7*s.* 6*d.*, 10*s.*, and 16*s.* each. Postage free.

JOHN WHITE, Manufacturer, 228, Piccadilly, London.

JUDSON'S DYES.—18 Colours, 6d. each.

RIBBONS, WOOL, SILK, FEATHERS,

Completely dyed in 10 minutes without soiling the hands.

Full Instructions supplied. Of all Chemists and Stationers.

JUDSON'S DYES.—Dyeing at Home.—JUDSON'S simple DYES are most useful and effectual. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES. Beautiful effects are thus produced in green, pink, brown, and many other colours—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES.—Ferns, Grasses, Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c., by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed.

JUDSON'S DYES.—Ink—Ink—Ink.—A Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water.

JUDSON'S DYES.—For Colouring Architectural Plans, &c.—Much trouble may be saved in grinding up colours to a uniform tint. They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 11 other shades.

JUDSON'S DYES.—For Staining Wood.—Diluted with Water. They sink deeply into the fibre, and will not rub off. They form the most economical stain on record. Light Brown for mahogany colour is excellent; No. 2 Black for walnut; Canary for satin; also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE,

Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

NEXT WEEK, medium 8vo. price 21*s.*

DEEP-SEA FISHING AND FISHING-BOATS.

An Account of the Practical Working of the various Fisheries around the British Islands; with Illustrations and Descriptions of the Boats, Nets, and other Gear in use.

BY EDMUND W. H. HOLDSWORTH, F.L.S., F.Z.S., &c.,

LATE SECRETARY TO THE ROYAL SEA FISHERIES COMMISSION.

London: EDWARD STANFORD, 67 AND 68, CHARING CROSS, S.W.

MUTUAL LIFE ASSURANCE.

SCOTTISH PROVIDENT INSTITUTION,

Established 1837.

6, ST. ANDREW SQUARE, EDINBURGH; 18, KING WILLIAM STREET, LONDON, E.C.

The FOURTH DIVISION OF PROFITS has been recently made. The investigation, conducted upon the safest estimates, showed a surplus of £376,000; of which the sum of £251,500 was divided among the Policy-holders. The number entitled to participate in terms of the laws was 4,599, and the result was that policies, say for £1,000 sharing for the *first* time, were increased to sums ranging from £1,170 to £1,300. The increase to policies which had before participated was proportionally greater. In a few cases Policies which have shared at the whole *four* divisions have now been doubled.

The Directors invite attention to the principles of the Institution. It is the only office in which the advantage of participation in profits can be obtained on moderate terms; while from the principle on which these are distributed, Policies may eventually receive as large additions as in offices charging the usual high rates.

The premiums are at many ages twenty or twenty-five per cent. lower than in the other Scottish Mutual offices. For example, a Policy of £1,200 to £1,250 may, at ages 30 to 40, be received *from the first* for the same yearly payment, which in these would assure £1,000 only.

The FUND now exceeds £2,300,000. Notwithstanding its low premiums, no office of the same age in the kingdom has so large a fund.

In all points of ADMINISTRATION the rules will be found peculiarly favourable to the assured, in whose interests alone they have been framed.

Copies of the Thirty-sixth Annual Report may be had on application at the offices.

JAMES WATSON, Manager.
J. MUIR LEITCH, London Sec.

Just published, price 1*s.*

Offices—5, Bond Court, Walbrook, London, E.C.

HOLLOWAY'S OINTMENT and PILLS.—At the present time much watchfulness must be exercised, and the earliest evidences of ill-health immediately checked, or a slight illness may result in a serious malady. Relaxed and sore throat, diphtheria, quinsey, coughs, chronic cough, bronchitis, and most other pulmonary affections will be greatly relieved by rubbing this cooling Ointment into the skin as nearly as practicable to the seat of mischief. This treatment, at once simple and effective, is admirably adapted for the removal of such diseases during infancy and youth. Old asthmatic invalids will derive marvellous ease from the use of Holloway's remedies, which have brought round many such sufferers, and re-established health after every other means had signally failed.

THIS DAY, IN OCTAVO, PRICE 21s.

CAVE-HUNTING:

RESEARCHES ON THE EVIDENCE OF CAVES RESPECTING THE EARLY INHABITANTS OF EUROPE.

BY W. BOYD DAWKINS, M.A., F.R.S., &c.,

THE REGISTRAR-GENERAL'S WEEKLY RETURN.
HYGIENIC SOPHISMS.—DR. LETHEBY ON DEATH-RATES.
APPARENT AND REAL CAUSES OF ENTERIC FEVER.

MACMILLAN AND CO., LONDON.

THE ENTOMOLOGIST'S MONTHLY MAGAZINE,

Price Sixpence, monthly, 24 pages 8vo., with occasional Illustrations,

Conducted by J. W. DOUGLAS, R. McLACHLAN, F.L.S., E. C. RYE, and H. T. STAINTON, F.R.S., &c.

This Magazine, commenced in 1864, contains standard articles and notes on all subjects connected with Entomology, and especially on the Insects of the British Isles.

Subscription—Six Shillings per Volume, post-free. The volumes commence with the June number in each year.

Vols. I. to V. (strongly bound in cloth) may be obtained by purchasers of the entire set to date, at the increased price of 10s. each; the succeeding vols. may be had separately or together at 7s. each.

London: JOHN VAN VOORST, 1, Paternoster Row.

[illegible]—Communications, &c., should be sent to the Editors at the above address.

NEWMAN'S ENTOMOLOGIST:

A MONTHLY ILLUSTRATED JOURNAL OF BRITISH INSECTS

Conducted by EDWARD NEWMAN, F.L.S. F.Z.S. &c.,

Late President of the Entomological Society.

The objects of the *Entomologist* are to give every information about Insects; more especially to work out the history of those which attack Fruit and Forest Trees, Vegetables, Root and Seed Crops, Greenhouse and Garden Plants, with a view to suggesting remedies. Notes, Observations, and Queries on every branch of the Science are solicited. To preserve a continuous record of the occurrence of rarities. To improve collections by offering a ready medium for the exchange of specimens.

Published on the First of every Month.

PRICE SIXPENCE.

SIMPKIN, MARSHALL, and Co., Stationers' Hal Court.

THE JOURNAL OF INDUSTRY:

An Illustrated Record of Manufactures, Inventions, and the Applied Arts and Sciences

The "Journal of Industry" is issued with the object of promoting the interests of British Manufacturers by—
The Collection of Valuable Information from all parts of the Industrial World.
The Discussion of Matters important to Manufacturers.
Descriptive Accounts of useful Patents and Inventions.
Reports and Correspondence on Science in its Relation to Industrial and Commercial Progress.

*** This Journal has now the Largest Circulation of any Publication of the kind in the World.

Published by WILLIAMS & COMPANY, 7, Bolt Court, Fleet Street, London.

THE

JOURNAL OF APPLIED CHEMISTRY,

A MONTHLY PUBLICATION OF 16 PAGES QUARTO,

Devoted to Chemistry as applied to Arts and Manufactures, Agriculture, Metallurgy, &c. &c.

At Two Dollars and Twenty-five Cents per annum, or One Dollar and Seventy-five Cents paid strictly in advance, including postage to United Kingdom.

Each number contains Original Articles on General Chemistry applied to Arts and Manufactures; Matter on Particular Fabrications, as Petroleum, Soaps, Tanning, Dyeing, and numerous others.

A suitable space is also devoted to Practical Recipes and interesting Scientific Facts.

Full and carefully-prepared Market Reviews and Prices Current of Drugs and Chemicals of every description are given in each number for New York, Boston, and Philadelphia, with Tables of Imports.

EIGHTH VOLUME, commenced with January number.

DEXTER & CO., PUBLISHERS,

17, Spruce Street, New York; 48, Hanover Street, Boston; and 149, South 4th Street, Philadelphia, Pa., U.S.A.

HENRY S. KING & CO.'S LIST.

OBSERVATIONS on MAGNETIC DECLINATION made at TREVANDRUM and AGUSTIA MALLEY in the Observatories of his Highness the MAHARAJAH of TRAVANCORE, G C S I, in the Years 1852 to 1869. Being Trevandrum Magnetical Observations Volume I. Discussed and Edited by JOHN ALLAN BROUN, F.R.S, late Director of the Observatories. With an Appendix. Imperial 4to, cloth, £3 3s.

. The Appendix, containing Reports on the Observatories and on the Public Museum, Public Park, and Gardens at Trevandrum, pp. xii. 116, may be had separately, price 21s.

SENSATION and INTUITION: Studies in Psychology and Æsthetics. By JAMES SULLY, M.A. Demy 8vo, cloth, 10s. 6d.

"As to the manner of the book, Mr Sully writes well, and so as to be understood by anyone who will take the needful pains. . . . The materials furnished by a quick and lively natural sense are happily ordered by a mind trained in scientific method. This method is especially conspicuous in those parts of the book where, with abundant ingenuity and no mean success, Mr. Sully has endeavoured to throw some light of cosmic order into the chaos of æsthetics. Unhappily for our present purpose, the best qualities of the work are precisely those to which we cannot do justice within the limits of a review."—*Saturday Review.*

SECOND EDITION.

The PRINCIPLES of MENTAL PHYSIOLOGY. With their Applications to the Training and Discipline of the Mind, and the Study of its Morbid Conditions. By W. B CARPENTER, LL D. M.D. F.R.S, &c 8vo, illustrated, cloth, 12s.

"This valuable book. . . . Let us add that nothing we have said, or in any limited space could say, would give an adequate conception of the valuable and curious collections of facts bearing on morbid mental conditions, the learned physiological exposition and the treasure-house of useful hints for mental training which make this large and yet very amusing, as well as instructive book, an encyclopædia of well-classified and often very startling psychological experiences."—*Spectator.*

PHYSIOLOGY for PRACTICAL USE. By various writers. Edited by JAMES HINTON. 2 vols. crown 8vo, with 50 Illustrations, cloth, 12s 6d.

"A more clear, valuable, and well-informed set of treatises we never saw than these. . . . And they are pleasant reading, too, as well as useful reading."—*Literary Churchman.*

THE INTERNATIONAL SCIENTIFIC SERIES.

NEW VOLUMES.

ANIMAL MECHANISM. A Treatise on Terrestrial and Aerial Locomotion. By E. J. MAREY, Professor at the College of France, and Member of the Academy of Medicine. Second Edition, crown 8vo, with 117 Illustrations, cloth, 5s.

THE DOCTRINE OF DESCENT AND DARWINISM. By Professor OSCAR SCHMIDT (University of Strassburg). Crown 8vo, illustrated, cloth, 5s. [Immediately.

HENRY S. KING & CO., 65, Cornhill, and 12, Paternoster Row.

MUTUAL LIFE ASSURANCE.

SCOTTISH PROVIDENT INSTITUTION,

Established 1837.

6, ST. ANDREW SQUARE, EDINBURGH; 18, KING WILLIAM STREET, LONDON, E.C.

The FOURTH DIVISION OF PROFITS has been recently made. The investigation, conducted upon the safest estimates, showed a surplus of £376,000; of which the sum of £251,500 was divided among the Policy-holders. The number entitled to participate in terms of the laws was 4,599, and the result was that policies, say for £1,000 sharing for the *first* time, were increased to sums ranging from £1,170 to £1,300. The increase to policies which had before participated was proportionally greater In a few cases Policies which have shared at the whole *four* divisions have now been doubled.

The Directors invite attention to the principles of the Institution. It is the only office in which the advantage of participation in profits can be obtained on moderate terms, while from the principle on which these are distributed, Policies may eventually receive as large additions as in offices charging the usual high rates.

The premiums are at many ages twenty or twenty-five per cent lower than in the other Scottish Mutual offices For example, a Policy of £1,200 to £1,250 may, at ages 30 to 40, be received *from the first* for the same yearly payment, which in those would assure £1,000 only.

The FUND now exceeds £2,300,000 Notwithstanding its low premiums, no office of the same age in the kingdom has so large a fund.

In all points of ADMINISTRATION the rules will be found peculiarly favourable to the assured, in whose interests alone they have been framed.

Copies of the Thirty-sixth Annual Report may be had on application at the offices.

JAMES WATSON, Manager

J. MUIR LEITCH, London Sec.

Lately published, price 15s.

THE UNIVERSAL-PROPORTION TABLE, by Professor J. D. EVERETT, is equivalent to a Slide-rule 13 ft. 4 in long, and can be read to four places of figures. It is printed, from engraved plates, on two folio sheets of card, one of which is cut in gridiron fashion, and is to be laid upon the other The scale is such that a displacement of a third of an inch would only produce an error of one per cent. It is especially adapted to such operations as reducing feet to metres, reducing numbers to percentage of a given number, or in general to changing a set of numbers in any required ratio.

It is accompanied by six folio pages of letterpress, consisting of directions for use, and subsidiary tables

For a fuller description see *Philosophical Magazine*, November 1866.

CONTENTS:—The Prologue—Tyrrhenians and Turanians—Ethnographical Notes on the Etruscan People—The Etruscan Mythology—The Etruscan Numerals—Epitaphs—Words denoting Kinship—The Bilingual Inscriptions—Forms of Dedication—The Ancient Vocabularies—Names—The Epilogue.

London: MACMILLAN & CO.

HOLLOWAY'S PILLS and OINTMENT.—Dyspepsia, Jaundice.—These complaints are the results of a disordered liver, which secretes bile in quality or quantity incapable of digesting food. Digestion requires a free flow of healthy bile, to promote which Holloway's Pills and Ointment have long been famous, far eclipsing any other medicine. Food, irregularity of living, unwholesome climates, and other causes, are constantly deranging the liver, but that important organ can, under all circumstances, soon be regulated and healthily adjusted by Holloway's Pills and Ointment, which directly control its vital secretion. The Ointment rubbed on the skin penetrates straight to the liver, the blood and nerves of which it speedily rectifies. One trial is all that is needed; a cure will soon follow.

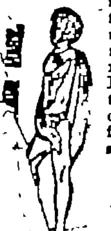
WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 500 Medical Men to be the most effective invention in the curative treatment of Hernia. The use of a steel spring, so often hurtful in its effects, is here avoided; a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, 2 inches below the hips, being sent to the manufacturer,



JOHN WHITE, 228, Piccadilly.

Price of a Single Truss, 16s., 21s., 26s. 6d., and 31s. 6d.
" Double " 31s. 6d., 42s., and 52s. 6d.
" Umbilical " 42s. and 52s. 6d.
Post-free.

ASTIC STOCKINGS, KNEE-CAPS,
Varicose Veins and all cases of weakness and Swellings of the Legs, &c. They are porous, light in texture, and inexpensive, and drawn an ordinary stocking. Price 4s. 6d., 7s. 6d., 10s., and 16s. each.

COCOA

Owes its delicious flavour to the choice Caracas and other Cocoas with which it is manufactured.

JUDSON'S DYES.—18 Colours, 6d. each

RIBBONS, WOOL, SILK, FEATHERS,

Completely dyed in 10 minutes without soiling the hands.

Full Instructions supplied. Of all Chemists and Stationers.

JUDSON'S DYES.—Dyeing at Home.—JUDSON'S simple DYES are most useful and effectual. Ribbons, silks, feathers, scarfs, lace, braid, veils, handkerchiefs, clouds, bernouses, Shetland shawls, or any small article of dress, can easily be dyed in a few minutes without soiling the hands, violet, magenta, crimson, mauve, purple, pink, ponceau, claret, &c.

JUDSON'S DYES.—Photographic Paper Positives or Photo-Prints should be dipped in hot water and then submitted to a hot bath of JUDSON'S DYES. Beautiful effects are thus produced in green, pink, brown, and many other colours—Use Judson's Dyes for general tinting. Dye your Cartes de Visite.

JUDSON'S DYES.—Ferns, Grasses, Flowers, and Sea-weeds may be dyed most exquisite colours, green, crimson, purple, scarlet, &c., by simply dipping them in a solution of JUDSON'S DYES. Charming Bouquet may be thus composed.

JUDSON'S DYES.—Ink—Ink—Ink.—A Sixpenny Bottle of JUDSON'S DYES, violet, red, or magenta, will make half a pint of brilliant writing ink in one minute by simply adding hot water.

JUDSON'S DYES.—For Colouring Architectural Plans, &c—Much trouble may be saved in grinding up colours to a uniform tint They may be used either with a brush or pen. Rose pink, purple, canary, crimson, orange, green, blue, magenta, and 12 other shades.

JUDSON'S DYES.—For Staining Wood.—Diluted with Water. They sink deeply into the fibre, and will not rub off They form the most economical stain on record. Light Brown for mahogany colour is excellent; No. 2 Black for walnut; Canary for satin; also black, lavender, magenta, and many other colours.

SIXPENCE PER BOTTLE,

Of Chemists and Oilmen in London, Chemists and Stationers in the Country.

Just ready, in Two Vols. 8vo, cloth extra, price 36s.

WITH MAPS, PORTRAITS, AND UPWARDS OF FIFTY FULL-PAGE ILLUSTRATIONS BY
ZWECKER AND DURAND.
